Is come to lay his wearied bones among ye.

In the long list of compounds of which this participle is the first element, the use of the fuller form (the form in n, or the genuine participial form) is almost universal. In *Broke-winded*, however, there is an instance to the contrary, which, like the majority of the objectionable forms of the simple word, occurs in poetry.

Broker. *s.* [Connected by Wedgwood with the root *br-k*, or *rr-ak*, itself connected with the meanings 'reject, refuse, criticize, select': meanings which he illustrates by references to the Lithuanian *brokoti* = blame; the Russian *brakovat* = select, sort; the Danish *crag* = exception, doubt, blame; the Dutch *brack quod* = goods damaged by sea-water; and other analogies. If hence, the original import of the word in question was 'rejecter, faultfinder, critic,' as in Langlande:

'Amiee burgeses have I he

Dwelling at Lambur

And part (mael) backbiting he a *brocours*

To blame men's ware.'

Hence, also, the German *makler*, connected with *makel* = blemish, and the French *courtier* from *correcteur*. This view connects the word with *brack*, in *brackish* and its congeners, which, by an extension of the principles here indicated, are very numerous, *break*, &c.

Nevertheless, I prefer to connect it with *Brook* from *brucan*.

That it is immediately connected with *Broke v. n.* is beyond doubt. Against connecting this with *brook* the chief fact is the difference of the vowel sounds in the two words, viz. the sound of the long *o* in *broke* and *broker*, and the sound of the *oo* in *brook*. This, however, is neither more nor less than the difference between *Broach* and *Brooch*; words which are etymologically the same, but words wherein a modification of the import is connected with a modification of the sound and spelling.

If this affinity be real, the sequence of ideas is, 'use, be familiar with, do business with, act as a go-between, earn a commission for so acting'; this last meaning being closely connected with *use* as a term connected with the profits on lending money. How naturally the two words go together may be seen in the last three extracts under the third sense of *brocage*. That the office of a *broker* = blamer and a *corrector* are closely allied is true; and it is true that in the correction of anything we seek for

blemishes. Still, the office of the *corrector* is that of *inspector* rather than *broker*.

At the same time the fact of the words allied with *brak* and *break* on the one side, and with *brook* and *brucan* on the other, being words of a similar form, is worth noting; since what we see in our own language in the case of roots beginning with *br* and ending with *k*, is also to be seen in Latin. The Latin equivalent to an initial *br* is *fr*; so that, while word for word *brook* = *frur* (the *k* being given in the derived form *fructus*), the Latin for *break* is *frango*, a word which, while it contains in the present tense, and certain other forms, an *n*, gives in the preterite tense and the participle the simpler and more radical forms *frēg-i*, and *frac-tus*.

The extract from Langlande would be more important than it is if it were not in a line, where the metre requires that three words should begin with *b*.]

We see this parallelism in the properties of the different metals; in those of sulphur, phosphorus, and carbon; of chlorine, iodine, and *bromine*; in the natural order of plants and animals, &c.—*Mill, System of Logic*, iii. 22, § 9.

Brome(-grass). *s.* [Lat. *brunus*.] Indigenous grasses of the genus *Bromus*.

Notwithstanding the almost universal dislike which agriculturists now have to the presence of either of these *brome* grasses (*Bromus arvensis* and *Bromus mollis*) in their hay-fields, and the care with which they examine samples of ryegrass seed with the view of preventing their introduction; yet there is a strong presumptive proof that in many parts of Britain one, if not both, of these species formed the subject of field culture even prior to the general cultivation of ryegrass.—*Morton, Cyclopaedia of Agriculture*, in voce.

Bromine. *s.* [Gr. *brōmion* = frigid.—Of the two forms *Bromē* and *Bromine*, the latter is the commoner; indeed, at present, it is the generally recognized scientific form. This is because its place in the same class with chlorine, iodine, and fluorine is acknowledged; of which class the termination *-ine* is, in chemical language, the sign.] In *Chemistry*. Elementary substance so called. See *extract*.

Bromine was discovered in 1826 by M. Balard, of Montpellier. It was originally obtained from the uncrystallizable residue of sea-water, usually called *bittern*. . . . At common temperatures and pressures *bromine* is a deep reddish-brown liquid, of a strong disagreeable odour, whence its name. It emits a brownish-red vapour at common temperatures, &c.—*Brande, Manual of Chemistry*.

Bronchi. See *Bronchus*.

Bronchial. *adj.* [Fr. *bronchial*; from Gr.

βρόγχος = throat.] Belonging to the throat.

Inflammation of the lungs may happen either in the *bronchial* or pulmonary vessels, and may soon be communicated from one to the other, when the inflammation affects both the tubes. *Arbuthnot*.

The sounds produced by the meeting and mingling of air with fluid in the *bronchial* tubes during the act of respiration I have called *crepitations*; and of crepitations I have made but one distinction only, large and small; large crepitation, arises from a *x* mucus and undulating with fluid in the larger bronchi; small crepitation from the same conditions in the smaller bronchi and the vesicles of the lungs.

Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, lect. ix.

Bronchitic. *adj.* Connected with, arising from, suffering from, or consisting in, bronchitis; as in such medical terms as 'bronchitic affections, symptoms, patient,' &c.: (the more general term *Bronchial* is, perhaps, the commoner). See *Bronchitis*.

'Thunder and turf!' roared the Sultan, 'son of a dog! Nephew of a tadpole! Deceased wife's brother of a *bronchitic* pie! Do you laugh at my beard?'—*Sala, Secret of Muley Mogrebien Bey*, p. 189.

Bronchitis. *s.* [Like the *-itis* in *Bromine*, the *-itis* in this word, and a long list of others, has a definite pathological import, signifying an inflammation of the particular tissue or organ of which the name is conveyed in the initial part of the word; e.g. *pericarditis* is inflammation of the pericardium, *nephritis* of the kidneys, &c. Most of these terms are less naturalized than the present.] Inflammation of the bronchi.

There is a form of chronic *bronchitis* in which all the conceivable forms of phthisis are present except the auscultatory; emaciation, hectic fever, cough, and a copious thick, yellow, glandular expectoration. Yet the chest sounds well everywhere upon percussion, and the auscultatory sounds are purely bronchial and nothing more, and proceeding from the bronchi in their first division, and not beyond them.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. ix.

I have described acute *bronchitis* as it appears

when it terminates favourably. . . . But acute bronchitis may terminate unfavourably.—*Watson, Lectures on the Principles and Practice of Physic*, ii. 32.

Bronchocele. *s.* Swelling of the thyroid gland.

The simple *bronchocele* is a mere enlargement of the thyroid gland. —*Camp, Surgical Dictionary*.

Bronchophony. *s.* [Fr. *bruyage* and *phoné* = voice.] In *Medicine*. See extracts.

Of the other sounds some still respect the respiration, some the voice, and some the act of coughing. They are what are called the bronchial respiration and the bronchial voice, or *brucrophony*. When there is bronchial respiration you hear the breathing, and when there is *brucrophony* you hear the voice, as you never hear them when all is healthy. . . . bronchial respiration or *brucrophony* arises when the lungs have undergone such changes as are calculated to render them better conductors of sound than they are in their natural and healthy state. —*Dr. F. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. x.

A less degree of this sound like that of a person talking in a tube, and whose words, for that reason, are muffled and indistinct, is called bronchial voice, or *brucrophony*. —*Watson, Lectures on the Principles and Practice of Physic*, ii. 17.

Bronchotomy. *s.* [Fr. *bronchotomie*; from *Gr. βρογχή* and *τομή* = act of cutting.] Operation which opens the windpipe by incision, to prevent suffocation.

The operation of *brucrophony* is an incision into the *arteria*, to make way for the air into the lungs, when respiration is obstructed by any tumour compressing the larynx. —*Shurp, Surgery*.

Bronchus. *s. pl. bronchi.* Portion of the trachea, or windpipe, between its bifurcation and its division into the smaller air-tubes, which consists of a primary tube, or bronchus, to each lung, *Anatomical and scarcely naturalized*; yet the root of more than one derivative.

The trunks of the trachea are entire and cartilaginous; in some species the trachea bifurcates half way towards the lungs, the *bronchi* being of great length, and one of them usually describing a large curve. In Testudo even the left bronchus is three fourths longer than the trachea; but in Testudo even the trachea is one fourth longer than the *bronchi*. —*Gray, Lect. on the Fishes*.

In *Uromyces* the trachea of the common trunk of the animal does not bifurcate until it has ascended the neck as far as the origin of the bronchial tubes; and not until after the right aorta has arched over the right *bronchus* does it send off, at an acute angle, the common trunk of the right and left bronchi. —*Ibid.*

In Geckos and Scinks the trachea terminates in the lungs without dividing into *bronchi*. —*Ibid.*

Brood. *s.* Same as Brand-sword. *Obsolete*.

Foolish old man, said then the pagan wroth, That we must words or charms may force withstood; Soon shalt thou see, and then believe for truth, That I can carve with this enchanted brood. —*Spenser*.

Bronze. *s.* [Fr. *bronze*; Italian, *bronzo*.]

1. Mixed metal, consisting of copper with a small proportion of tin, and sometimes of other metals.

Imbrow'd with native bronze, lo! Henley stands, Tuning his voice, and balancing his hands. —*Pope, Dunciad*.

Used in Archeology in an *adjectival* sense, or as part of a *compound*, with *age*, *stage*, *period*, *epoch*, for the time during which bronze instruments were employed, opposed to the earlier stone and the later iron, as suggested by the following extract.

Stone, bronze, iron, and clay,—these four materials form the greatest portion of all our collections, as well as of all remains into antiquarian lore; next to these stand objects of an exclusively ornamental kind, composed of gold, silver, amber, glass, enamel, amongst which *bronze* and iron may also be occasionally reckoned. Horn and bone deserve no less notice, since both were used, not only for ornament, but also in the construction of weapons. —*Kemble, Hove Period*.

2. Relief, or statue, cast in bronze. I view with anger and disdain, How little gives thee joy or pain: A print, a bronze, a flower, a root, A shell, a butterfly can do't. —*Prior*.

3. Brass, in the sense of impudence. All men have their faults; too much modesty is

his, says his Grace.—And yet I dare say you don't want assurance when you come to solicit for your friends.—O there, indeed, I'm in bronze.—*Goldsmith, The Goodnatured Man*, ii. 1.

4. Colour so called; brown with a yellow tinge and a metallic lustre.

Chrysolids [is] the only quadruped which presents us, in its glossy fur, with those beautiful metallic shades so common among birds, insects, and fish; in some lights the fur is green, in others golden orange, and this again changes into bronze. Its size is rather less than a mole. —*Nesbitt, Natural History of Quadrupeds*, p. 135.

Bronze. *r. a.* Endow with the nature of, or make like to, bronze; cover with bronze hue; harden as brass.

Art, cursed art, wipes off the indebted blush From nature's cheek, and bronzes every shame. —*Young, Night Thoughts*, v.

Bronzed. *part. adj.*

1. Covered with, or coloured like, bronze. His palace bright Bristled with pyramids of glowing gold, And touched with shade of bronzed obelisks. —*Keats, Hyperion*, l. 178.

2. See extract.

[The use of the word *bronzed* in the sense of tanned, sunburnt, is probably not originally derived from comparison with the colour of the metal bronze, but from the primary sense of the Italian *bronzo*, embers. *Abbronzare*, *abbronzare*, to roast on the embers, to sear, tan. —*Wedgwood, Dictionary of English Etymology*.]

Brooch. *s.* [see Broach.] Jewel; ornament of jewels.

Brooch. *r. a.* Adorn with jewels. *Rare*.

Not th' imperious show Of the full-featured Cesar, ever shall Be brooch'd with me; if knife, darts, serpents, have Edges, sting, or operation, I will suffer. —*Shakespeare, Antony and Cleopatra*, iv. 13.

Brood. *v. n.* [A.S. *brod*, from *brædan*; Old English, *brād*,—that *brood*, *breed*, and *bird*, along with the German *brut* applied to the fry of fish, may all be connected, seems likely when we consider the near relation between warming, sitting as a hen, hatching, and producing offspring. In the following extract (from Wedgwood) the old High German gives us the word in question simply meaning *warms*: 'also unsh dñi molia *brudet* under under froste skirnet = even as us the wool *broods* (warms) and protects against the frost.' For its use in this sense in English see *Brooding*.]

1. Sit (as on eggs, to hatch them).

After the fashion of oppressed wretches, they mistake their own vindictive feelings for emotions of piety, encouraged in themselves by reading and meditation: a disposition to *brood* over their wrongs, and, when they had worked themselves up into hating their enemies, imagined that they were only hating the enemies of heaven. —*Maccarty, History of England*, ch. 1.

His memory long will live alone In all our hearts, as mournful light That *broods* above the fallen sun, And dwells in heaven half the night. —*Tennyson, To J. S. 13*.

3. Deserve; earn.

She disliked nothing but her name, and said that
she would christen her new, and that henceforth she

South Sea, p. 11.

Brook. *v. n.* Endure; be content; bear.

He, in these wars, had flatly refused his aid; be-
cause he could not brook that the worthy prince

Brooklet. *s.* [There is a difference of opi-
nion concerning the origin of the last syl-
lable in this word.

Concerning its import there is more
unanimity. It is evidently a diminutive
affix.

Being this, however, it is found in none
of the languages from which the English
is likely to have taken it; there being no
such diminutive as *-let* in either the Anglo-
Saxon or the Anglo-Norman, the Latin or
the Greek. Neither is it German or
Danish; indeed, it is wholly wanting
throughout the allied languages.

On the other hand, the French has the
termination *-et*; whilst, in the German
languages in general, the termination *-el* is
by no means rare.

In English it occurs in comparatively
few words; whilst the evidence as to its
nature is often indirect and obscure. Thus,
while *knuck-le* = small bone is common
enough, *knuck* = bone in general is by no
means a familiar word. That it is not to
be found in English at all is, probably, an
unsafe assertion. It is only certain that
the most familiar instance of it is the Ger-
man *knuck*. Most of the other instances,
of which the list is short, are in the same
condition: i.e. they are rarely found in
both forms, the simple and the derivative,
in one and the same stage of the English
language.

This, with many competent authorities,
invalidates the doctrine that the *-el* and *-et*,
in words like the present, are brought from
different languages (the *-el* from the Anglo-
Saxon, and the *-et* from the French); and
one of the hypotheses by which the whole
syllable is deduced from a single language,
and the exceptional phenomenon of a hybrid

formation avoided, connects it with the word
litt-le; so that the analysis of the word
under notice would be *brook + lit* (= little).
In favour of this view are certain Scandi-
navian compounds, in which *litt-le* = little is
affixed to certain proper names; e.g. *Meta*,
which thus becomes *Metulille*, or *Little*
Meta.

That a difficulty is created by the rarity
of English diminutives in *-el* in general,
and by the nonexistence of such particular
words as *brookle*, *streamle*, and the like,
(from which, according to the doctrine that
makes the form a hybrid one, *brooklet* and
streamlet must be derived.) is not denied.
On the other hand, however, this is the
doctrine which requires the fewest as-
sumptions.

It is doubtful, however, whether the form
itself deserves the exhibition of any hypo-
thesis at all for its explanation; the words
in which it is found being, generally, evi-
dent coinages of the author who supplies
the examples of them. The words in *-let*
belonging to the language of common life
are extremely few, *ringlet*, *streamlet*, and
hamlet being the chief of them; for the
detail of which see the several entries.
That nine out of ten of the newer forma-
tion, *kinglet*, *hooklet*, and a long list of
others, are scarcely to be called English
words, will probably be the opinion of every
reader who trusts to his own instinctive
perception of what belongs to his mother-
tongue, and what does not, rather than to
the authority of certain writers; some of
whom are very indifferent ones.

It is in words of a poetical tinge that
these diminutives are the commonest; and
here they ought most especially to be con-
demned as superfluous. Next to poetry
and poetical prose, works on Vegetable and
Animal Physiology supply us with the chief
instances. Here the coinage of such words
as *hooklet*, &c., is more excusable; dimi-
nutives being often wanted from the nature
of the subject. With all this, the termina-
tion is objectionable.]

Small brook.

little *brooklet*, and was awakened from his reverie by
the sound of his own name. — *Sir E. Butler, Eugene*

compound, the *lin* in the German *linen-*
kraut, and the *lem* or *lelm* in the Scandi-
navian *lemmike*, *ledmike*, has nothing to do
with the ordinary word *lime*.] Veronica
Beccabunga (a water plant of real or sup-
posed antiseptic qualities).

Since the time of drinking this diet-drink, Sir
Thomas Millington, coming to see me, discovering
my condition, told me that he believed no outward
application would do me any good, and advised me
to use a plain antiseptic diet-drink made of dock
roots, water-cress, *brockshure*, plantain, and elder-
leaves, which I have done now this fortnight, but, as
yet, have received no sensible benefit by it, my sores
smelling as bad, and being as painful as ever. — *Kay,*

Amidst a rabble so desperate no power officer's life
was in safety. At the cry of 'rescue,' bullets with

Brother. *s.* (the plural of *brother* is *brothers*, i.e. the plural in *-s* of an ordinary noun; *brethren* is a collective rather than a plural noun. Another form, and an older, though a rarer one, is *breðre*; in which we have the simple change of vowel, as in *goose, geese, mouse, mice, &c.*; the addition of the *n* being a secondary process.) [A.S. *broðer*.]

So we some antique hero's strength,
Learn by his lance's weight and length;
As these vast beams express the least,
Whose shady brow alive they dress. *Waller.*

Perhaps the only portrait of Cranwell that presents to us an image of his mind is the miniature by Cooper. The eye is steady, vigilant, resolute, pregnant with observation. The lips are compressed and firm, yet visibly adapted to convey emotion and feeling. The brow is large, and indicative of a capacious spirit.—*W. Gadsden, History of the Commonwealth of England, b. iv. ch. i.*

3. General air of the countenance.

Though all things foul would bear the brows of grace,
Yet grace must look still so. *Shakespeare, Macbeth, iv. 3.*

Brow. *r. a.* Form a raised edge to; bound.

Tending my flocks hard by t' hill's lilly crests,
That brow this bottom glade. *Milton, Comus, 532.*

Browbeat. *r. a.* [This, as far as its form goes, is an exception to the general rule that no transitive verb preceded by a noun forms a compound; notwithstanding the existence of numerous *apparent participles*, such as *leavetaking, hagmaking*, and many others. No such verbs, however, as *leavetake* or *haymake* exist; or, if they do, they exist only as verbs derived from the participial forms; not as verbs from which the participle itself is derived.

The full details of this combination will be found in the Preface, so that here they are but slightly noticed. The principle which forbids such compounds as *leavetake, hagmake, &c.*, rests on the fact of the ordinary construction of a transitive verb with its substantive placing the substantive last. As we say *take leave*, and *make hay*, such compounds as would arise out of the agglutination of the two separate words into a single compound, would take the form of *spitfire, duredevil*, and others, in which the verb precedes.

In *browbeat*, however, though the elements are of the same kind as *hay* and

make in *haymake*, the import of the compound is different. *Browbeat* is not to beat the brow; nor is *brow* an objective case governed by the verb. It is rather a substantive in the instrumental case—a common one in many languages, and one of which we have fragments in our own (see *The as in all the more, and Why*)—with the meaning of *beat* (or intimidate) *with, or by means of, the brow*. Hence its power is, more or less, adverbial.]

Depress with severe brows, and stern or lofty looks.

Young men, prentices, servants, the common sort, are so far from hiding themselves, or rising up, that I have often seen the magistrate fared, and almost *brow-beaten*, as he hath passed by. *Dr. J. White, Sermon, p. 54: 1015.*

It is not for a magistrate to frown upon, and *browbeat* those who are hearty and exact in their duty; and, with a grave nod, to call a resolved zeal, want of prudence.—*South.*

Count Tariff endeavored to *browbeat* the plaintiff, while he was speaking; but though he was not so impudent as the count, he was every whit as sturdy.—*Addison.*

I will not be *browbeaten* by the supercilious looks of my adversaries. *Arbuthnot and Pope, Martinus Scriblerus.*

Your brother Smythe *brow-beats* a jury, and forces them to alter their verdict, by which they had found a Scotch serjeant guilty of murder.—*Jacobs, lit. 83.* Accordingly, while he was in secret drawing up a refutation of the whole romance of the Popish plot, he declared in public that the truth of the story was as plain as the sun in heaven, and was not ashamed to *browbeat*, from the seat of judgment, the unfortunate Roman Catholics who were arraigned before him for their lives. *Macaulay, History of England, ch. ii.*

Generally speaking, I believe that a quiet, gentle, and straightforward, though full and careful, examination, will be the most adapted to elicit truth; and that the manoeuvres, and the *brow-beating*, which are the most adapted to confuse an honest witness, are just what the dishonest one is the best prepared for.—*W. Holtz, Elements of Rhetoric.*

Bruswort. *s.* Indigenous plant so called. (To this plant, the *Scrophularia aquatica*, the term may be conveniently limited; though, as *figwort* is another name for the same object, it is scarcely necessary. Nevertheless, it is the better appellation; inasmuch as the *Scrophularia aquatica* is remarkable for the brown colour of its leaves, especially when young. The German derivations point not only to two plants, but to two different words as their respective origins.)

Brúisewort. *s.* Indigenous plant so called: (*Saponaria officinalis* L.; and according to Dr. Prior, *Belis perennis*, i.e. the common daisy. The *Saponaria*, however, is the plant to which the name is most conveniently limited; for, not to mention the absence of evidence of its application to the daisy, a plant with the saponaceous quality of making a lather might, like the saponaceous opodeldote, be used for bruises). It is commonly called *Saponaria*, of the great seavering quality that the leaves have: for they yield out of themselves a certain lather when they are bruised, which seavering almost as well as soap; although Ruellius describes a certain other *sapewort*. Of some it is called *Albina* or *Dunsonium*; of

others *Saponaria Gentiana*, whereof doubtless it is a kind; in England it is called *Sopewort*, and of some *Brúisewort*. - *Gerarde, Herbal*, p. 444: ed. 1633.

Catharine of Braganza is there represented as a low glowing *brúnette*, with sparkling dark eyes and a rich profusion of chestnut hair, dressed in a wavy, curling on each side of her face, consisting of parallel lines of crimson curls descending in graduated rows to the waist, in a most extraordinary and unaccountable fashion, as if in imitation of a Lord (Chief Justice's state-wig, but without powder). - *Agnes Strickland, Lives of the Queens of England, Catharine of Braganza*.

Brúnt. *s.* [Brunt, Assault, onset, hunt. Commonly explained from German *brunt*, heat, strong passion. But the meaning is distinctly the front of an assault.

'Tint in all haste he would join battle even with the *brúnt* or breast of the van guard'. (Hall, in Richardson).

'The shot of armbusters—overthrew many a horse and man, and specially the fore ryders that put themselves in prose with their lance and sharpe lances to win the first *brúnt* of the field'. (Faulconer, in Richardson).

The metaphor is really derived from the practice of hanging a bell on the leading head of a herd, which the others then readily follow. Hence the expression of *beating the bell* for being the first in a company. Now the Serbian has *brunza*, a cattle bell, from the material of which it is made, and the thing must once have been known by the same name in the language of the Germans, in which *brunza* now signifies the first of a train of language animals, the bell-man, while the diminutive *brunzina* is applied to a cattle bell, and *porbar la brunzina* is actually used in the sense of being the first in anything. If we read the phrase *porbar la brunza*, it would exactly correspond to our expression of bearing the *brunt*, and the meaning of the word *brunza* being lost in its adoption into English in the form of *brunt*, it would require from the context the sense of onset, shock. - *Wedgwood, Dictionary of English Etymology*.

1. Shock; onslaught; blow; stroke.

God, who raised a fountain, at thy prayer,
From the dry ground to spring, thy thirst 't'ally
After the *brúnt* of battle.

• The friendly rug preserv'd the ground,
And headlong knight, from bruise or wound,
Like feathered betwixt a wall
And heavy *brunt* of cannon-ball. *Butler, Hudibras*.

in January, gave me such a shock as utterly disabled
me to do anything but sit still and pore upon my
pain.—*Rog. Correspondence*, p. 413.

With *endure, bide, and bear*.

Erna chose rather to *bide* the *brunt* of war, than
venture him. *Sir P. Sidney*.

In the close covert of her guileful eye,

brunt: a common soldier may fly, when it is the
day of him that holds the standard to die upon the
place.—*South*.

Brush. s. [from Fr. *brosse*.]

1. Implement for cleaning anything, by rub-
bing off the dirt or soil: (generally made
of histles set in wood).

Mr. T. Mason obtained a patent in October, 1830,
for an improvement in the manufacture of this ar-
ticle. It consists in a denser mode of fixing the
knots or small bundles of hair into the stock or the
handle of the *brush*. This is done by forming grooves
in the stocks of the *brushes*, for the purpose of re-
ceiving the ends of the knots of hair, instead of the
holes drilled into the wood, as in *brushes* of the com-
mon construction. These grooves are to be formed
like a dovetail, or wider at the bottom than the top;
and when the ends of the knots of hair have been
dipped into cement, they are placed in the grooves
and compressed into an oval form, by which the
ends of the hair will be pressed outwardly into the
recess or wider part of the dovetailed groove; or
the grooves may be formed with threads or teeth on
the sides, instead of being dovetailed; and the cement
and hairs being pressed into the teeth or
threads will cause them to adhere firmly to the stock
or handle of the *brush*.—*Ure, Dictionary of Arts*,
Manufactures, &c., p. 190.

2. Larger and stronger pencil used by paint-
ers.

Brush. v. a.

1. Sweep, cleanse, or rub with a brush.

If he be not in love with some woman, there is no
believing old signs; he *brushes* his hat o'morning;
what should that bode?—*Shakespeare, Much ado*
about Nothing, li. 2.

A whole row of stiff necks, in cravats of the most
unexceptionable length and breadth, were just before
me. A tall thin young man, with dark wavy hair

stock gloves, and affecting to look round the room

with the supreme indifference of bon ton.—*Sir E. L.*

into it by all the rivers.—*Bentley*.

cal system is breaking up, as in this country at

All history teaches that the probability of a revo-
lution, and also the violence with which it is con-
ducted, depend, chiefly, on the degree in which a
people has been not only emancipated, but also *de-*
graded and *brutalized* by a long course of oppres-

Buccaneer, s. (used *adjectively* also.) See extract from Wedgwood.

A set of pirates in the 17th century, who resorted to the islands and uninhabited places in the West Indies, and exercised their cruelties principally on the Spaniards. The name, according to Oliver Oceanus, who wrote a history of adventures in the Indies, is derived from the language of the Caribs. It was the custom of those savages, when they took prisoners, to cook their flesh on a kind of grate, called *buccana* (whence the term *buccaneer*; a blackened hog, a hog dressed whole). The piece of such a fence was called *buccan* (or according to Cotgrave the wooden grilliron itself), and this mode of dressing, in which the flesh was cooked and smoked at the same time, was called in French *boucaner*. Hence those who established themselves in the is-

lands for the purpose of smoking meat were called buccaniers. The term *bucca* is still applied in the West Indies to a place used for the drying of produce. — *Wedgwood, Dictionary of English Etymology*.

Whether gold will not cause either industry or vice to flourish? And whether a country, where it flowed in without labour, must not be wretched and dissolute like an island inhabited by buccaniers? — *Bishop Berkeley, Quæritæ*.

By this time all the Antilles and all the shores of the Gulf of Mexico were in a ferment. The new colony was the object of universal hatred. The Spaniards began to fit out armaments. The chiefs of the French dependencies in the West Indies eagerly offered assistance to the Spaniards. The governors of the English settlements put forth proclamations interdicting all communication with this nest of buccaniers. — *Macaulay, History of England*, ch. xiv.

(For an example of adjectival construction see under next entry.)

Buccaneering, verbal abs. Act, practice, or profession of a buccaneer.

The sluggish men of stern aspect, with a formidable talent for fighting, were of the same race that about eight hundred years later, in a rather buccaneer fashion, crossed the German Ocean, invaded and conquered this country, and imposed its institutions and language on the greater number of its inhabitants. We may forgive them their buccaneering, since to them we owe Bacon and Newton, Shakespeare and Milton, the steam-engine, the American republic (now as populous as the parent country), and the conquest of India. Assuredly no other race of men has ever achieved such things. — *Crawford, On the Civilization of Man*.

Bûcha, *s.* [see extract.] Tree so called (*Diosma crenata*).

This plant grows at the Cape of Good Hope, and is called by the natives *Bûchu*. The leaves are diuretic and anodyne, and have been found useful in cases of chronic irritation of the kidney and urinary bladder. . . both water and alcohol extract the medicinal virtues of the *bûchu* leaves, which seem to reside in a volatile oil and extractive matter. — *Hooper, Medical Dictionary*, in voc.

Buck, *s.* [A.S. *bucca*.] Male of the fallow deer; male of rabbits and some other animals (in which cases it usually forms the first element of a compound, as *buck-goat*).

I've got nothing in my bag but an old buck rabbit with a nob tail. — *Theodore Hook, Gilbert Gurney*, vol. i. ch. v.

Buck, *s.* [? perhaps no more than a corrupt English pronunciation of *beau*.]

'*Bucks* and belles are beaux and belles.' (Richardson, in voc.)

Bold, ostentatious, or forward person; blood; dandy.

Ay, ay; that's right. Put the saddle on the right horse, my buck. — *Colman the elder, The Jealous Wife*, v. 3.

Lord, sir, you have never allowed him fair play; give him a purse full of gold. Alas! it would make a buck of me. — *Morton, Secrets worth knowing*.

Accordingly I dried my tears, turned marker by night at a gambling-house, and buck by day in Bond Street (for I returned to London). I remember well one morning, that his present Majesty was pleased, en passant, to admire my buckskins — tempora mutantur. — *Sir R. L. Bulwer, Pelham*.

Buck, *s.*

[Formerly, when soap was not so plentiful a commodity, the first operation in washing was to set the linen to soak in a solution of wool ashes. This was called *bucking* the linen, and the ashes used for that purpose were called *buck-ashes*. The word was very generally spread. In German it is *buckeln*, *buckeln*, *beichen*, *buchen*, *bûcken*, *bûken*. Swedish, *bûka*; Danish, *bûge*; French, *bûcher*, *buer*; Italian, *bucare*; Breton, *bûgi*. Spanish, *bugada*, *lye*. The derivation has been much discussed. The more plausible are: Danish, *big-aake*, the ashes of beech-wood, chiefly employed in making potash; but the practice of bucking would have arisen long before people resorted to any particular kind of wood for the supply of ashes. Italian, *bucata*, buck ashes, supposed to be so called from *bucca*, a hole, because the ashes are strained through a pierced dish, in the same way that the term is in Spanish *colada*, *lye*, *buckin*, the linen at buck, from *colare*, to strain, to filter, to buck, *lessivare*, *lairo* la lessive. But the analogy does not hold, because *bucca* does not appear ever to have been used in the sense of straining or filtering. The true derivation is seen in Gaelic *bog*, moist, soft, tender, and as a verb, to steep or soak. Broton

buck, soft, tender, *bunkat*, to soften. The ideas of wet and soft commonly coincide, as German *erweichen*, to soak, from *weich*, soft; Italian *molle*, soft, wet; Latin *mollire*, to soften, and French *mouillir*, to wet. Polish *mokry*, wet; *wiecki*, soft; *miekac*, to soak, to soften; *moceję*, to soak foul linen before washing. Bohemian *mak*, a steep for flax. To *buck* then would originally be to set the linen to soak in lye, and as *a* and *b* so often interchange, the word is doubtless identical with *mek*, the root of the Slavonic words above mentioned, and of the Latin *macere*, to soak. — *Wedgwood, Dictionary of English Etymology*.]

1. Lye or liquor in which clothes are washed.

Buckbean, *s.* [see Buckwheat.] Menyanthes trifoliatum: (a bitter and astringent indigenous plant, growing in boggy places, with a white flower and leaf slightly resembling that of the bean; akin to the gentians, and used in some countries instead of the hop).

Marsh trefoil is called in High Dutch *Bilberkle*, that is to say *Custoria trifolium*, or *Trifolium flurum*: in Low Dutch, of the likeness that the leaves have with the garden beans, *Beechboonen*, that is to say *Faselia hercynica* or *Boona hercina*: the later herbalists call it *Trifolium paludstris* and *paludum*: of some *Isopyrum*; in English, *Marsh-clover*, *Marsh-trefoil*, and *Bucks-beane*. — *Gerarde, Herball*, p. 1194: ed. 1633.

Buckbean, believed by some botanists to have been originally bog-bean, which, from its French synonym *trèfle des marais*, is very plausible, but that in Dutch also it is called *bucks-boonen* and in German *bucks-bohne*, and is considered a remedy against the scurvy or scurvy, whence it is called *scharkbocks klee*, *Bucks-beane*, and not bog-bean, is the name of it in all the old herbaria, and this must be admitted to be the proper and established one; being no doubt derived from the Dutch word, one which seems to be a corruption of *Latin scorbutus*, the scurvy. — *Dr. Prior, Popular Names of British Plants*.

In the following extract the second element seems to be *bane*.

The bitter nauseous plants, as centaury, *buckbane*, gentian, of which tea may be made, or wines by infusion. — *Sir J. Floyer*.

Bucket, *s.* [Fr. *baquet*.]

Bucketful, *s.* Amount sufficient to fill a bucket.

When there were calves still young enough to want *bucketfuls* of fragrant milk. — *Silas Marner*.

[This, like the other compounds of *full* and a noun denoting a measure of any kind (such as *spoon*, *pocket*, &c., giving *spoonful*, *pocketful*, &c.), has two plurals; one formed by adding the *s* to the former,

the other by adding it to the latter, element: *spoonful* and *spoonfuls*, *pocketful* and *pocketfuls*, *bucketful* and *bucketfuls*, &c.

In either case the word is a compound, the accent being *bucketful*, *bucketful*; *spoonful*, *spoonful*, &c.

Such, at least, is the view, if (as in the present edition) we take the accent as the test of composition. See Preface.

Two *buckets* or two *spoons* *fill* means something different; i. e. the combinations convey a meaning in which we look less at the measure itself than at the necessity of having it complete. In the true compounds, on the other hand, we look at the nature of the measure rather than at the accuracy of the measurement.

In the matter of form, *bucketful* is the truer plural of the compound; *bucketful* being the plural of the first word in a combination which, from its accentuation, assumes the appearance of a compound, though not one in the strictest sense of the term.]

Buckler. s. [Fr. bouclier.] Shield; defensive weapon buckled on the arm.

Still fighting, still defending as I past.

Give, yield, lay down, as opposed to take up, the bucklers.

A most manly wit, Margaret, it will not hurt a woman; and so, I pray thee, call Beatrice: I give thee the bucklers.—*Shakespeare, Much Ado about Nothing, v. 2.*

The above is a well-known extract from Shakespeare. It is one, however, which, though sufficient to serve as a text for the forthcoming remarks upon the word *buckler* in its present sense, can safely be curtailed of its conclusion; the continuation of the dialogue, though it gives another sense to the term under notice, being, so far as it fails to explain itself, not worth explaining. In stating this, the editor merely repeats Johnson in his character of Shakespearean commentator, rather than in that of lexicographer.

Johnson writes that *give the bucklers* means *yield or give in*; and compares the phrase with the Latin *clypeum abjicere*—throw away the shield. As far as the general sense goes, this interpretation

is sufficiently accurate. It fails, however, to show that, though phrase for phrase to give may mean to yield the bucklers, the word *buckler* is, word for word, *clypeum*; although, looking merely at the rendering of the two words, this is what the English and Latin dictionaries give us.

Steevens supplies instances; and in these lie the main argument against *buckler* *clypeum*. They are all in the plural number.

At this his master laugh'd, and was glad, for further advantage, to yield the bucklers to his primitive.—*Greene, Conquesting, pt. ii.*

Into whose hands she throws the weapon first, let him take up the bucklers.—*Rosley, Woman never ceases.*

Charge one of them to take up the bucklers against that hair-monger Horace.—*Dexter, Satiricist.*
And now I lay the bucklers at your feet.—*Chapman, May-day.*

If you lay down the bucklers you lose the victory.—*Id., Every Woman in her Humour.*

It goeth against his stomach [the cock's] to yield the skuntlet and give the bucklers.—*P. Holland, Translation of Pliny.*

The sense of the second and third of these extracts is only partially contrasted with that of the others. The first, fourth, fifth, and sixth denote the act of a vanquished opponent; yet the second and third do not denote the act of a conqueror. What they denote is the act of a challenger, or champion; of one who defies his opponent, but of one who may or may not beat him. In neither case, however, will the ordinary sense of *buckler* (—shield) give the details of either the challenge or the defeat, since each combatant could wear but one such. In the extract from Holland the original text throws no light; for it contains no such word as *clypeum*, nor any word which sustains his metaphor. It was evidently one which he got from the customs of his own times, rather than from the text of his original. This suggests that the word under notice meant something buckled either on both hands as in case of boxers, or on both feet as in that of fighting cocks.

Buckler. v. a. Support; defend.

Fear not, sweet wench, they shall not touch thee,
Kate,

Buckling. adj. Wavy (applied, especially by the author quoted, to that variety of human hair which, without exactly curling, has a wavy character); sometimes simply curling. *Rare*

With the European races, the hair of the head is usually soft, silky, and buckling. With the races of the continent of Asia, of America, and generally with the Malayan and Polynesian nations, it is long, lank, and coarse. With the negroes of Africa it is short and woolly, covering the whole scalp. With the Oriental negroes it is also woolly in texture, but it grows in long isolated tufts.—*Crawford, On Classification of the Races of Man.*

Buckrams. s. [? *buck*, and the first element in *ramsons*, q. v.] Indigenous sort of onion or garlic (*Allium ursinum*).

Buckthorn. s. [catachrestic translation of Gr. *πυλάκωρα*, from *πύλος* = *burus* = box (tree), *άκρω* = thorn.—see last extract.] Tree of the genus *Rhamnus*: (in England, the *Rhamnus catharticus* and the *Rhamnus minor*).

The later herbalists call it in Latin *Rhamnus solutis*, because it is set with thornes, like as the rose, and beareth purging berries. *Mathiolus* named it *Spina infectoria*, *Valerius Cordus* *Spina cervi*, and divers call it *Burpurgina*. It is termed . . . in English *Lawative Ram*, *Way-thorne*, and *Buckthorne*; in Low Dutch they call the fruit or berries *Rhinj-bewen*; that is as though you should say in Latin *lucce Rhebanne*; in English *Rheinberries*.—*Gerarde, Herball, p. 1338: ed. 1633.*

Vos, physic; buckthorn, wenna, and so forth.—Colman the younger, The Poor Gentleman, li. 2.
Buckthorn, from Middle Latin *spina cervina* . . . of *Valerius Cordus*, who . . . seems to have misunderstood that of box-thorn, German *buxodon*, translation of the *πυλάκωρα* of Dioscorides.—*Dr. Prior, Popular Names of British Plants, in voce.*

Buckwheat. s. [translation of Lat. *Fagopyrum*, from Gr. *φῡγός*, Lat. *fygus* = beech, *πῡμῡ* = wheat. *Brank* is another name for this plant. The words *buck* (better spelt *buch*, so that the connection with the word *beech*, German *buch*, may be exhibited) and *brank* have both had their import unduly extended.

(1.) Word for word, *brank* is the English form of both the Latino-Gallic (see *Brank*) *brance*, and the Low Latin *branca* = paw. Hence *brankursin* is the name of a plant, otherwise called, rarely, though properly, the *beersbrank*, and, commonly, though catachrestically, the *beersbreck*; *beersfoot* being another synonym. This is the *Acanthus mollis*.

(2.) The *Menyanthes trifoliata* is called *Buckbean*.

The comparative frequency of the word *buck* = beech in compounds, and its rarity or non-existence as a modern current name of the *beech*, taken as a simple term, requires notice. Both *buc* and *bēce* occur in Anglo-Saxon, the latter most commonly. Hence, words like *buckmant* and *buckwheat* may be English words derived from the scarcer of the two concurrent

'forms. But they may also be words derived direct from the German, as ready-made compounds, wherein *buche* is the ordinary name for *beech*, wherein *buchmast* and *buchweiz* are the common compounds, and wherein both the *must* and the *wheat* are commoner as food than in modern England. Form for form, *beech* should be compared with *bench*. Each comes from a word in *-ce*, i.e. *bice* and *bence*. Each has a broader concurrent form *bœc* and *banc*; and each changes the *ce* into *ch* (*-tsh*), as is generally the case when *c* precedes a small vowel, and is not simply sounded as *s*.]

Polygonum Fagopyrum: (indigenous or naturalized plant of the order Polygonaceæ, with three-cornered seeds like those of the beech).

Buckwheat is considered a native of Asia, and not of Europe, though sometimes found in a seemingly wild state. . . . In China, and other countries of the East, it is cultivated as a bread-corn. The flour is also used in cookery and bread-making in various parts of Europe, to make cakes and crumpets in England, and as rice or gruel in Germany and Poland. The seed is said to be excellent for horses and poultry.—*London, Encyclopedia of Plants*, p. 327.

Bucolic. *adj.* [Gr. *βοικολικός*—appertaining to a cowherd, *βοικός*.] Pastoral.

The pastoral form is a fault of the poet's times: it contains also some passages, which wander far beyond the bounds of bucolic song.—*T. Warton, Notes on Milton's smaller Poems*.

The author's [Burling's] eclogues, I believe, are the first that appeared in the English language. They are like Petrarch's and the Mantuan's of the moral and satirical kind, and contain but few touches of rural description and bucolic imagery. . . . I shall only add here, that before the close of the fifteenth century, Virgil's *Eclogues* were translated into Italian by Bernardo Pulci, Fossa de Cronoma, Bonaventura, and Florio Buoninsegni.—*Id., History of English Poetry*, § 20.

Bud. *s.* [Fr. *bouton*; the doubt here indicated is suggested by the first extract.] First shoot of a plant; gem.

[Not immediately from French *bouton*, Dutch *botten*, to push, put forth, bud, as the final *t* is never converted into a *d* in the adoption of a word into English. A nearer connexion is Bohemian *bot*, a prick, Lithuanian *badyti*, to prick, stick, the root of English *bodkin*, an instrument for pricking. The first appearance of the germ is expressed by the notion of pricking, piercing, as in French *perdre du jour*, the peep of day, Bohemian *botka*, a point, *botec*, a thorn, sting, *badok*, a thistle, &c.—Wedgwood, *Dictionary of English Etymology*.]

Writers say, as the most forward bud Is eaten by the canker ere it blow, Even so by love the young and tender wit Is turn'd to folly, blushing in the bud, Losing his verdure even in the prime.

The great advantage of these stocks to the nurseryman is, that, as they may be budded the very first year of their growth on the spot where they are sown, a grafted tree may be obtained with them at the least possible expense.—*London, Arboreta Britannicum*, p. 678.

Budding. *part. adj.* Like a bud, especially in respect to youth and freshness.

Budding. *verbal ab.*

1. Coming into bud.

These sonnets, like the *Venus* and *Adonis*, and the *Rape of Lucrece*, are characterized by boundless fertility and laboured condensation of thought, with perfection of sweetness in rhythm and metre. 4. In *Medicine*. Sisy coagulated mass which forms on the surface of the blood.

The formation of the buff may be somewhat favoured by the size of the orifice from which the blood has been drawn, the rapidity with which it has flowed, and the form of the vessel in which it has been received; but the buff itself entirely depends on the state of the fibrine, which, in conjunc-

tion with a portion of serum and much albumen, not only chiefly constitutes it, but modifies it according to the state of vital influence and vascular action.—*Copland, Dictionary of Practical Medicine*, i. 182.

5. In the plural. Regiment so named. A defeat would be fatal to the whole undertaking. A bloody victory gained in the heart of the island by the mercenaries of the States General over the Coldstream Guards and the Buffs would be almost as great a calamity as a defeat.—*Macaulay, History of England*, ch. ix.

From thence it has been transferred in English to the sideboard on which the drinkables are placed at meals, and in French to the office in a department where other kind of business is carried on, while in Spanish it has passed on to signify simply a desk or writing-table. *Wedgwood, Dictionary of English Etymology*.]

Bulld. v. a. (preterite participle, *bulld*; more properly, *bullded*.) [*Wedgwood* derives this word from the Norse *bol* = farm, *byli* = habitation, *bylja* = raise a habitation. He also gives the following extract from Sir John Mandeville:

'That city took Joure and destroyed it and carried it and alle hem that *bylled* it again.'

Richardson refers us to the A.S. *byldan* = confirm, strengthen; herein adopting *Horne Tooke's* view. He adds that the Dutch *bielden* and German *bilden* are used more widely, and signify to form, fashion, represent, or shape generally. *Grimm*, however, who expressly connects the German word with the Dutch, as expressly states that neither the one nor the other is to be found in *Mæsgothic*, *Anglo-Saxon*, or *Old Norse*; the instances to the contrary being only apparent. This complication, along with the fact of the form suggested by *Wedgwood* failing to explain the presence of the radical and final *d*, makes the origin of the word doubtful, all the more from the spelling being *ui*; a combination of letters which suggests a French, rather than an Anglo-Saxon, origin. The editor, laying less stress on this than many of his predecessors, believes, notwithstanding the high authority of *Grimm*, that, word for word, the English *bulld* and the German *bilden* are the same.] Raise or construct.

Bull. *s.* [from Lat. *bulia*, originally a small
round hollow golden ornament suspended
from the neck, worn by Roman boys of
noble birth; thence the seal appended to a
Papal document.—see extract from Ar-
buthnot.] Letter published by popes and
emperors.

A *bull* is letters called apostolick by the canonists,
strengthened with a leaden seal, and containing in
them the decrees and commandments of the pope or
bishop of Rome. —*Ayliffe, Præcipua Juris Canonici.*

There was another sort of ornament worn by
the young nobility, called *bulle*; round, or of the
figure of a heart, hung about their necks like
diamond crosses. These *bulles* came afterwards to
be hung to the diplomas of the emperors and popes,
from whence they had the name of *bulle*. —*Arbuthnot.*

grammar, improper English, and downright *bulls*. —*Dequien, Preface to Notes on Emperor of Morocco.*
I confess it is what the English call a *bull*, in the
expression, though the sense be manifest enough. —*Pope, Letters.*

We cannot refrain from referring to what are
called *bulle*, the particular offspring of the fertile
Liberman mind. A *bull* is the exact counterpart of
a witless. Instead of discovering real relations,
which are not apparent, it admits apparent relations
which are not real. 'I will make her,' says Sir Laertes
O'Frigger of his mistress, 'Lady O'Frigger, and a
good husband into the bargain.' . . . It was — who
said, 'Mr. Speaker, I don't see why we should put
ourselves to many pains to benefit posterity. What
has a century ever done for us?' On another occasion
he announced that he was quite ready to give up 'not
a part, but the whole of the constitution, to preserve
the remainder.' . . . The Irish have even invented
the practical *bull*; for, in 1789, the mob, out of en-
mity to a Dublin tender, burnt all the notes of his
which they found in circulation, and made his for-
tune. —*Westminster Review*, October, 1863, p. 463.

Mable.*

For what sound or ratio and view could justify his
hostility to all voluntary defence, his repudiation of
all expression of public gratitude for the services of
our soldiers and sailors, his unqualified defence of

towards the brute creation? —*Brookman, Statesmen
of the Reign of George III.*

Bulbeggan. *s.* [see *Bully-Brong*.] Some-
thing terrible; something to fright children
with.

they were used as words of scorn and contempt. —*Ayliffe.*

against such converts as come from them. —*Sheldon, Monks of Aulicard*, p. 137.

people, and set them an enflaming. —*Talbot*, no. 212.

fellow).

—*Spenser, Faerie Queen.*

the foremost of the janizaries, was at once shot with
two *bullets*, and slain. —*Arnold.*

• And as the bull, so different is the fleet;
Their mounting shod is on our sails design'd;
Deep in their hulls our densely built is light,
And through the yielding planks a passage find.

Dryden.

As an instance of the arbitrary way in which words acquire their precise meaning, it may be observed that a *bullet* in English is applied to the ball of a gun or musket, while the projectile of a cannon is called a *ball*. In French, on the contrary, it is *bullet* de canon, *ball* de fusil.—*Wedgwood, Dictionary of English Etymology.*

Bulletin. *s.* [Fr.] Public announcement, especially of military operations; medical reports as to the health of public men.

I am inclined to prefer the pithy and sententious brevity of these *bulletins* of ancient rebellion, before the loose and confused prolixity of the modern advertisements of constitutional information.—*Burke, Appeal from the New to the Old Whigs*, (Rich.)

He fell immortal in a *bulletin*.
I wonder (although Mars, no doubt, 's a god I
Praise) if a man's name in a *bulletin*
May make up for a bullet in his body.

Bull-head. *s.*

1. *Callinus Gobioides*. See extracts.

The capito, a *bul head*.—*Nominate* (? 15th century); *Fisheries in Library of National Antiquities*, p. 222, col. 2. (Wright.)

The miller's humb, or *bull-head*, is a fish of no pleasing shape; it has a head big and flat, much greater than suitable to its body; a mouth very wide, and usually gaping; he is without teeth, but his lips are very rough, much like a file; he hath two fins near to his gills, which are brandish or crested; two fins under his belly, two on the back, one below the vent and the fin of his tail is round. Nature has painted the body of this fish with whitish, blackish, brownish spots. They are usually full of spawn all the summer, which swells their vents in the form of a bag. The *bull-head* begins to spawn in April; in winter we know no more what becomes of them of is or swallows.—*L. Walton, Complete Angler*.

The lamprey, I believe, cannot raise itself up in the water, and I doubt whether the *bull-head* does or can.—*Ray, Correspondence*, p. 245.

Bullion. *s.* [Fr. *bouillon*—stud.]

[The original meaning of the word *bullion*, *bullion*, *bullion*, was the mint office where the precious metals were reduced to the proper alloy and converted into stamped money, from the Latin *bullia*, a seal, whence Modern Greek *βουλια*, to seal, to stamp; *βουλια*, the matrix or die with which coins were stamped. In this sense the word appears in our early statutes. The stat. 9 E. III. c. 2, § 2, provides that all persons who should save a letter or less exchange on *bullion* or on *mercantile* silver or gold, vessel d'argent or toutz maners d'argent souve faux monnoie et festerling counterfeit, for the purpose of exchange. In the English version these words are erroneously translated 'that all people may safely bring to the exchequer *bullion* or silver in plate, &c.,' which has led to the assertion that 'bullion' in the old statutes is used in the modern application of uncoined gold or silver. The 27 Ed. III. c. 2, § 14, provides, 'que toutz marchantz... puissent sauverment porter... plate d'argent, billetes d'or et tout autre maner d'or et toutz maners d'or et d'argent a nostre *bullion* ou a nos eschauges que nous ferons ordonner a nous dites estables et ailleurs, pourvu il nous money de notre coigne convenablement a la valeur.' Again, 1 Hen. IV. c. 10, 'que la tierce partie de tout le monnoie d'argent que sera porte a la *bullion* sera faite eschauges de feluyages' shall be coined into halfpence and farthings. In these and other statutes all trafficking in coin was forbidden, except at the *bullion* or exchanges of the king; and similar restrictions were enforced in France, where the tampering with the coin was carried to a much greater extent than in England, inasmuch as to earn for Philippe le Bel the title of *le financier monnoyeur*. Hence among the French the carrying to the *bullion* their deeded money became a familiar operation of daily life, and 'porter au *bullion*,' 'mettre au *bullion*,' are metaphorically applied to things that require numbering. The deeded coin brought to be melted up was termed 'monnaie de *bullion*,' and hence *bullion* and the equivalent Spanish *colón* were very early used to signify the base mixture of which such coin was made, or generally a mixture of copper and silver. 'Ne quis aurum, argentum vel *bullionem* extra regnum nostrum deferre presumat.' (Stat. Philip le Bel in Duc. A.N. 1305.) In England the fortunes of the word have been different, and the Mint being regarded chiefly as the authority which determined the standard of the coin, the name of *bullion* has been given to the alloy or composition of the current coin permitted by the *Bullion* or mint. This *bullion* is translated in Torrioni's dictionary (A.N. 1687), 'leu, l'onzio di metallo,' and traces of the same application are preserved in the Spanish reckoning in 'reals viciados,' reals of standard currency. From a kind of standard fineness the significance has naturally passed in modern times to all gold and silver designed for the purpose of coinage. *Wedgwood, Dictionary of English Etymology*.]

In this way it applies to targets; to a policeman's lantern; to the boss in the middle of a sheet of glass, &c. In other cases its meaning is, probably, connected with a threatening or lowering appearance; e.g. when applied to a small cloud portending a gale; thence the gale itself.

Bully-rook, s. [The German *bulderen, bulderen, poltern*, signifying 'be noisy, threaten,' separate this word from *bully*; whilst the form *bulter-brook* separates it from *rook*, in the ordinary sense of the term; the meaning in the present compound being uncertain. Of a similar import with *bulterbrook* is the Dutch *bullebaek*; a compound which complicates the etymology of *Bulbeggan*; which is again complicated by the Welsh *barbach* = bulgoblin or bugbear; a word from which there is a long list of derivatives signifying 'terror, fright, scaring,' and the like, e.g. *barbaches* = female goblin; *barbachu* = frighten; *barbachael* = bugbearlike, &c.

At the same time the words *bugbear, beurlug* (as quoted by Todd from Sir Thomas Smith), *bugguboo*, along with the following passage from Chaucer, show that the image of some animal was connected with some of these words, which seem all connected with each other:

'The hamour of mechebilde
Caneth many a man in sleep to cry,
For fear of be, or of bode bode,
Or ellis that bulke bugges will him take.'

The clown mariner, leaving Tongue, his negro catan-
laid, in charge of the boy, and hiding himself by

Bumperize, v. n. Same as Bumper.

To-day Sir Thomas came to dinner. The spa
has done him a great deal of good, for he looks
another man. Pleased to see him, we kept *bumper*
very loud after roll-calling. Sir Thomas assuring us
every fresh bottle, how infinitely soder he was grown.
— *Colburn, Memoirs, p. 18.* (Ord MS.)

Bumpkin, s. [Wedgwood connects this word
with Bungle. The commoner derivation,
sanctioned by high authorities, is some
form of the German *baum* = tree = the di-
minutive *-kin*; in which case *bumpkin* =
heavy log of wood, stupid fellow; and the
-p is unnecessary.] Clown; rude country

her slowness to the person, she loved with
inexpressible violence, though with the purest
and most delicate passion. — *Fabling, Adventures of Joseph Andrews*.

The fable of the old man and the *bundle* of sticks,
compared with the fable, may serve to exemplify

and the weakness resulting from division. — *Whately, Elements of Rhetoric*, pt. i. ch. ii. § 8.

Shakespeare, Hamlet, v. 1.

Bungle. *v. n.* [I think the etymon of this
word must be *bung*; to which the addition
of *l* gives a diminutive or disparaging sense;
the word *bung* itself being to some extent,
in the current language at least, of the
same import. If so, to *bungle* means to
stop in a hurried unsteady manner any-
thing running away.] Perform clumsily.

Are you then desists? are you so for naught,
In all the Catholic depths of treason taught,
In orthodox and solid poisoning read?

It was characteristic of his mind, that, among a
few valuable lectures on some important subjects
which he collected into a volume, he has given a
place to one on corns and bunions, showing that
in his judgment a small evil which can produce great
annoyance requires as much consideration in its
turn as more serious disorders. — *Obituary Notice of Sir H. Brodie in Transactions of Royal Society*.

Bunny. *s.* [I take Mr. Wedgwood's etymon
here; considering that the word, a popular
but half obsolete name for an indigenous
animal, is just the term to be of Celtic
origin. *A priori*, however, it should be
Welsh or Cornish, i. e. British rather than
Gaelic. However, Mr. Wedgwood's illustrations
are: Munks, *bun* = but-end, thick end;
Gaelic, *bun* = root, stump. Hence, a
bunny = rabbit is the short-tailed animal,
the bobtail.] Rabbit. *Colloquial*.

Bunt. *s.* [see Bunting.]

1. Swelling part; increasing cavity.

The wear is a frith, reaching slopewise through

these members cannot be separated. — *Whewell, Novum Organum Geologicum*, app. 10.

Bird of the genus *Emberiza*.

The *bunting* (*Emberiza miliaria*) breaks out
into, but shells or hulls them most dexterously,
as I observe, laying one of them by me at this mo-
ment in a cage. — *Ray, Correspondence, Letter of Mr. Lister*.

You may depend on it that the *bunting*, *Emberiza*
miliaria, does not leave this country in the winter.
In January 1707 I saw several dozens of them in the
midst of a severe frost among the bushes on the
downs near Andover. In your woodland enclosed
district it is a rare bird. — *White, Natural History of Shropshire*, let. 12.

lived in company. — *Murray, Scotch gipsy*, vol. i.
ch. ii.

Do you see my boat? It has an ensign in it. It
is a piece of vulgar, engaged *bunting* — but all the
world takes it. Such is the force of symbols. —
Hannay, Singleton Poetical, p. li. ch. v.

[Instead of *bunt*, the word *bunt* is used in Somerset-
shire for sifting meal, whence *bunting*, the loose
woollen texture employed in the first in-
stance for that purpose, and then for making the
flags of ships, in which latter sense it is now ge-
nerally used. — *Wedgwood, Dictionary of English Etymology*.]

enough in the air to continue its ascent, and *buoy*
it up. — *Woodward, Natural History*.

Yet the recollection of the applause with which
he had been greeted still buoyed up his spirits. —
Macaulay, History of England, ch. x.

A horror at his crimes bleeds with the effect which we feel, but how is it qualified, how is it carried off, by the rich intellect which he displays, his resources, his wit, his buoyant spirit, his vast knowledge and insight into characters, the poetry of his part, not an atom of all which is made perceivable in Mr. U's way of acting it. — *Lamb, On the Tragedies of Shakespeare*.

That burr bringeth forth broad leaves; the stalks are divided into very many vines and branches bringing forth great burrs, round like bullets or balls, which are much all over and full of sharp crooking prickles, taking hold of men's garments as they pass by. The great burr is called in Greek *apocro*; in Latin, *Persicaria persicaria*, and *Arcetium*. The lesser burr is called of the Greeks *Enochos*, in Latin *Xanthoxylon*. It seemeth to be called Xanthoxylon of the Greek for the burr or fruit before it be fully withered, being stamped and put into an earthen vessel, and afterwards when need requireth the weight of two ounces thereof and somewhat more being steeped in warm water and rubbed on, maketh the hairs of the head red; yet the head is first to be dressed or rubbed in with niter, as Dioscorides writeth. The great Water-burr differeth not in anything from the first kind in roots or leaves, save that the first hath its leaves rising immediately from the tuft or knoll of the root. — *Gerard, Herball*, p. 40; ed. 1633.

Some he gave away, the rest he threw away, literally tossing and hurling it violently from him, as bees do burrs, or as if it had been infectious. — *Lamb, Essays of Elia, The two Rovers of Men*.

[Bur has two meanings: 1. an excrescence out of the regular surface or round the edge of a thing, as the bur of a ball, the neck produced by the hole through which the lead has been poured into the mould; the round knob or horn on a deer's head (Bailey); the uneven projection round the edge of a hole punched or bored in a piece of metal, &c. And secondly, the hooked saw-vessel of some kinds of plants. In the former sense the word is derived from the notion of huddling, the excrescence being compared to that made by the lands which form at the root of a branch. In the second sense it is derived from Fr. *bourre*, flocks or locks of wool, hair, &c., meaning tufft saddles, balls, or such like, also the down or hairy coat of sundry herbs, fruits, and flowers; also, less properly, any such trash as chaff, shales, husks, &c. *Bourre de soie*, tow of silk. (Ogier.) It. *borra*, any kind of quilling or stuffing, shearing of cloth, also all such stuff as hay, moss, straw, chits, or anything else that birds make their nests with. (Florio.) A bur then is a seed-vessel which sticks to our clothes like a flock of wool, and is not readily brushed off. The Northumberland bur is a huskiness of pronunciation, as if the speaker had some kind of bur or flocks in his throat impeding his utterance. The primitive meaning of Fr. *bourre* seems to be stuffing, what is put into a thing for the

purpose of puffing or swelling it out, from the Gael. *borr*, to swell; and it might also derive the sense of a knot or flock of wool from the same origin. Or it might with much plausibility be derived from Fin. *purra*, *Kethon purra*, anything comminuted by biting, chewing, or similar action, sawdust; O.H.G. *uzborn*, *arborn*, sawdust. I think, however, that the former is the more probable derivation of the two. — *Wedgwood, Dictionary of English Etymology*.]

2. Rough edge thrown up in unfinished work by the graver, needle, or other tool.

The burr of varnish occasioned by the cutting of the etching needle, is carefully removed, and when any mistakes are found to have been made, a stoppings mixture, as it is called, is used, generally composed of turpentine, varnish, and lamp black, and is applied with a camel's hair pencil; it speedily dries, and is as firm in its consistency as the rest of the ground. — *Foreign Quarterly Review*.

Burbolt. *s.* Same as Birdbolt.

Some boundless ignorance should on sudden shoot
His gross-knotted burbolt.

Marston, What you will, induction.

Burbot. *s.* [? *birdbolt*, from the largeness of its head.] Gadus Lotus: (a freshwater fish, called also *elpout*).

The portal trunk is single in the ling, the burbot, the pike, the eel, the lamprey, and the Phagostomes; but in the carp, where the lobes of the liver interlie with the convolutions of the intestine, the veins of this canal pass directly into the liver by several small branches, which ramify therein without forming a portal trunk. — *Owen, Anatomy of Vertebrates*.

Let slave at him so dreadfully amine,
That for his safety he did him constrain
To give him ground, and shift on every side,

2. Act of bearing children. *Obsolete*.

Thou hast a wife once call'd *Enilia*,
That bore thee at a burden two fair sons.
Shakespeare, Comedy of Errors, v, 1.

Burden of proof, in Logic, (the English rendering of the technical term *onus probandi*) is the obligation on the part of one of two disputants to give some positive reason in favour of his view, the other side of the question being supposed, from general assent, from established usage, or from some other cause, to have a presumption in its favour.

It is a point of great importance to decide in each case, at the outset, in your own mind, and clearly to point out to the hearer, as occasion may serve, on which side the presumption lies, and to which belongs the (more profound) burden of proof. . . . According to the most correct use of the term, a 'presumption' in favour of any supposition, means, that the burden of proof lies on the side of him who would dispute it. Thus, it is a well-known principle of the law, that every man (including a prisoner brought up for trial) is to be presumed innocent till his guilt is established. This does not, of course, mean that we are to take for granted he is innocent. It evidently means only that the burden of proof lies with the accusers. — *Whately, Elements of Rhetoric*, pt. i, ch. iii, § 2.

Burden. *v. a.* Load; encumber.

Burden not thyself above thy power. — *Ecclesiasticus*, xii, 2.

I mean not that other men be eased and you burden'd. — *2 Corinthians*, viii, 13.

Not burden'd, nature.

2. Useless; cumbersome.

To what can I be useful, where I serve,
But to sit idle on the household hearth,
A burdensome drone; to visitants a gaze?

Burdensome. *adj.* Grievous; troublesome to be borne.

His leisure told him that his time was eane,
And lack of load made his life burdensome.

Milton, Epitaph on the University Currier,

So in Polish *bure*, dark grey; *bura*, a rain-cloak of felt. Thus as the table in a court of audience was covered with such a cloth, the term *bureau* was applied to the table or the court itself, whence in modern French it is used to signify an office where any business is transacted. In English, from a writing-table the designation has passed to a cabinet containing a writing-table, or used as a receptacle for papers. — *Wedgwood, Dictionary of English Etymology*.]

Compare the villains who cut throats for bread,

sometimes with a little spice.—*Rees*, *Cyclopaedia*, in voce.

2. Applied to spirits.

Chaptal, with great probability, attributes this burnt taste (of the brandy) to the presence of oxalic acid in the wine. Though this flavour is disagreeable to the finest judges of brandies in the wine countries, it has become through the caprice of fashion an excellence in some exported brandies, and must accordingly be given by the manufacturer. —*Rees*, *Cyclopaedia*, voc. *Brandy*.

Burnt-fly. *s.* [?] Estrus bovis: (called also *oxfly*, *galhee*, or *brezee*).

2. Used figuratively. Bury, hide, or insinuate itself.

Nothing will convince these men that they cannot scatter the French Revolution at the first blast of their war-trumpet; that the French Revolution is other than a blustering effervescence, of brawlers and spouters, which, at the flash of chivalrous broadswords, at the rattle of gallows-ropes, will *barrow* itself, in dens the deeper the welcome.—*Carlyle*, *French Revolution*, pt. ii. l. v. ch. v.

On such occasions it will ever be found that the human vermin, which, incited by ministers of state and ministers of religion, *barrow* in the midst of civilisation, heathen in the midst of Christianity, *barrow*, among all physical and all moral pollution, in the cellars and garrets of great cities, will at once rise into a terrible importance. So it was now in London.—*Macaulay*, *History of England*, ch. x.

Bursary. *s.* Subsidiary allowance for students.

It has been considered as of so much importance that a proper number of young men should be educated for certain professions, that sometimes the public, and sometimes the piety of private founders, have established many scholarships, exhibitions, *bursaries*, &c., for this purpose.—*Smith*, *Wealth of Nations*, b. i. ch. x.

Burthen. *s.* [A.S. *byrðen*.] The more correct form of Burden.

It is remarkable that, although the feudal system established in England upon the Conquest broke in very much upon our ancient Saxon liberties, though it was attended with harsher servitude than in any other country, particularly with those two intoler-

alike *burthen* wardship and marriage: yet it has in general been treated with more favour by English than French writers.—*Italian, View of the State of Europe during the middle Ages*, ch. ii. pt. ii.

And perplex'd her, night and morrow,
With the *burthen* of an humour
Unto which she was not born.

1. Inter; put into a grave: (with or without funeral rites).

Among our Saxon ancestors, the dead bodies of such as were slain in the field were not laid in graves; but, lying on the ground, were covered with turves or clods of earth; and the more in reputation the persons had been, the greater and higher were the turves raised over their bodies: this some used to call *hurling*, some *heaving* of the dead; all being one thing, though differently pronounced, and from whence we yet retain our speech of *burying* the dead, that is, *hidding* the dead.—*Verdegan.*

Slave, thou hast slain me!
If ever thou wilt thrive, *bury* my body.

Shakespeare, King Lear, iv. 6.

3. Place one thing within another.

A tearing gown did break

The name of Antony: it was divid'd
Between her heart and lips; she render'd life,

—*John*, iii. 7.

She was the daughter of a king.

• *Shakespeare, Pericles*, iii. 2. scroll.

In the Bronze-period, cremation seems to have alternated with the simple *burying* of the dead, though the former seems to have been the most general. It is, however, certain that different tribes observed different customs in this particular. In Mecklenburg and Lauenburg, for example, burying the dead without burning appears as the exception. In both cases, a kind of foundation seems to have been made, which was formed of the stones strewn thickly around in the flocks. *Krafft, Horte Ferules*, introd. p. 45.

Burying-place. *s.* Place appointed for the sepulture of dead bodies.

The characteristics belonging to the graves of this period are not nearly so clear and definite as those attending the former. The grave, as regards its form, has only the appearance of a mound of earth superimposed upon the true *burying-place*, circular in form, and varying very greatly in height according to circumstances.—*Keable, Horte Ferules*, introd. p. 44.

Bush. *s.* [see extract.] Lining of harder material let into an orifice to guard against the wearing effect of friction.

fire

Religion did not consume, but inspire
Such piety, so chaste use of God's day.

That what we turn to feast, she turn'd to pray.

Donne.

With such a care,
As roses from their stalks we tear,

When we would still prefer them new,

Shall weeds and poisonous plants refuse to bear;
Each common *bush* shall Syrian roses wear?

Dequien, Virgil's Eclogues.

2. Bough of a tree fixed up at a door, to show that liquors are sold.

If it be true, that good wine needs no *bush*, 'tis true that a good play needs no epilogue.—*Shakespeare, As you like it*, epilogue.

3. Wild country in general. (That this meaning was originally attached to tracts covered by wood, and, as such, uncultivated, is beyond doubt. At present, however, it may apply to districts remarkable for nothing so much as their want of trees: such being the case in the parts north of the Cape of Good Hope settlements, and in a large part of Australia. The word is directly of colonial, remotely of Dutch, origin: Dutch being the language wherein the term is most generally used for a wild country; and the Dutch colonists of the Cape the particular introducers of it. It is probably from the Dutch *bushman*, rather than from the English combination *bush* + *man*, that we get the word *bushman* in its ordinary sense, i.e. as a term denoting an inhabitant of the barest and barrenest parts of the Cape. It is, however, a geographical, rather than a common, term; the division of mankind to which it applies being a section of the Hottentot class: the native name is

Saab. A *Bushwoman* is a female *Bushman*.

Beet the bush.

1. As in the proverb, 'One *beats* the *bush*, while another catches the birds.' Applied to cases where the labour bestowed upon any object falls to the share of one partner, whilst the results are monopolized by another; the metaphor being taken from *furling*. *Colloquial*.

2. Approach anything in a roundabout manner, instead of going directly to it; the metaphor being taken from *hunting*. (The verb here is often neuter, giving *Beet about the bush*.) *Colloquial*.

For a refinement upon this explanation, see *Bushfighting* and *Bushman*.

Bush. *v. n.* Grow, serve, or show as a bush.

Each flower of tender stalk.

I cannot but applaud the worthy industry of old Sir Bartholomew Crispstone, who from a very small nursery of ospreys, which he sowed in the neglected corners of his ground, did draw forth such numbers of osks of unexpected growth, as being planted about his fields in even and uniform rows, *bushed* and well watered till they had sufficiently fixed themselves, did wonderfully improve both the beauty and the value of his demesnes. *Revelyn, Sylva*, b. i. ch. ii. (Ord MS.)

Bushbeater. *s.* One who beats the bush in any of the senses of that combination. (In the following extract it is used as in *sporting* one who beats bushes to rouse the game.)

In time, however, Ferdinand sufficiently rallied to recover his reputation with the keeper, who, from his first observation, began to wink his eye to his son, an attendant *bush-beater*, and occasionally even thrust his tongue inside his cheek—a significant gesture perfectly understood by the imp.—*Disraeli the younger, The Earl of Temple*, b. i. ch. vi.

We rode through a *bushet*, or common, called Rodwell Lake. *Id.*, p. 153.

Bushfighting. *s.* [Though, word for word, this is a genuine grammatical compound of Bush and Fighting, the exact import of neither element is absolutely beyond doubt. This is on account of the complication introduced by the word *Am-bush*, its congener. Its meaning, especially when connected with any word denoting a fight or contest, is closely allied with those of the word Bush denoting the quarters of an enemy; yet without being identical. And the same connection between the same words exists in respect to their derivation; inasmuch as *ambush*, *ambuscade*, the French *bois*, and several other allied words, are all originally from the root *b-sh*. In *Bushman* we probably have little more than *ambushment* in another shape; just as we have *broider* from *embroider*, *body* from *embody*, and many other words beside. Hence, *Bushfighting* may mean anything between actual warfare with ambuscades and mere verbal circumlocution, hesitation, and avoidance of the main topic of

discourse, i.e. mere 'beating about the bush.']

Method of fighting practised against the American Indians, in which the troops scatter and fire from behind the shelter of a tree or bush.

And range amid the bushes thy self to feed.
Lucian, Poetical Rhapsody, p. 39: 1611.

[The foregoing modes of spelling the word (Bush and Busk, indicate a double origin: from the Icelandic *buskr*, a tuft of hair, bush, thicket (*buski*, a bunch of twigs, *bescan*); and from the French *busche*, *busche*, a whisp, tuft, whence *buschon*, a tavern bush, *buscher*, to stop, to thrust in a *busche* or tuft of hemp, tow, or the like. *Busch*, a bush, *bramble*.—*Wedgwood, Dictionary of English Etymology*.]

Busk, *v. n.* [This word, in respect to the questions connected with its form, and the explanation of the final *s + k*, is, in the eyes of those who uphold the importance of the Scandinavian, Norse, or Danish element in English, one of the most interesting in the language. Why it is this, may be seen from the following doctrine, taken along with certain facts connected with the Reflective Pronoun. Jamieson derived this verb from the Icelandic *bua*=prepare, dress; which may be, and often is, followed by the reflective pronoun *sik*=self; upon which Wedgwood remarks (*Dictionary of English Etymology*, in voce) that 'it is singular that, having come so near the mark, he fails to observe that *busk* is the simple adoption of the deponent form of the Icelandic verb *at buast*, for *at buase*, contracted from the very expression quoted by him at *bua sik*.' This identity of the three forms, *bua sik*, *buase*, and *busk*, is not only beyond all doubt, but is one of the most generally admitted facts in Scandinavian philology; wherein the following processes are verified in such a manner as to give us not only the special explanation of certain forms in Danish, Swedish, and Icelandic, but something like a general exhibition of the way in which an ordinary passive or deponent may be developed out of a middle voice; the middle voice itself having originated in the combination of an active verb and a reflective pronoun.

In the Norse language every Transitive Verb is in the same predicament with *bua*; i.e. (1) it can govern a Reflective Pronoun in the objective case which follows it, as

kalla sik=call (one's) self; (2) it can coalesce into one word with that Pronoun, the *i* being elided and the number of syllables lessened, as *buase*, *kallase*; (3) it can change the *se* into *st*, as *buast*, *kallast*; (4) it can lose the final *t*, so that words like *kallus* (or, with a change of vowel, *kalles*) result; in which case the original reflective and pronominal nature of the final consonant is so thoroughly concealed, that, if it were not for the history of the transformations being known to the minutest details, the real nature of the element in question would be either doubtful or obscure. In respect to their import, these forms are treated as Passives; and that, not only in Danish and Swedish, but also in the Icelandic grammars; and, in the later forms of speech, this is what they generally are. Still, even in respect to meaning, their more immediate origin as Middles and their remoter origin as Reflectives are manifest. In the Icelandic of the Edda distinctions may be found between such forms as *han var namnral*=he was named (a true passive), and *han namdist*=he named, or called, himself (a true middle); distinctions which become less clear as the language becomes modern. Again, as *sik* may mean not only (one's) self, but each other, its construction is often reciprocal; the result of which is a number of Deponent Verbs, such as *slauas*=fight, *bröttas*=wrestle, from *slau*+*sik*, *brötta*+*sik*=strike or grapple with one another.

Of the forms, that in *se* is characteristic of the oldest Icelandic and the oldest Norwegian. In the later Icelandic, *-st* is the sign of the Passive voice; and in the Danish and Swedish the still more altered forms in *-s* alone. If all this gives us the *-sk* in the word before us, the phenomenon is a curious one. In the first place, it gives us what is wholly wanting in the Anglo-Saxon, a Passive, Middle, or Deponent Verb; and, in the second place, it supplies what is also wanting, the Reflective Pronoun by means of which it is made: for, although we have in the words *him* and *self*, the equivalents to the Latin *illum* and *ipsum*, the representative of the true reflective pronoun *se* is wanting; a point upon which more will be written under Self. Nevertheless, it is doubtful whether *Busk* be a word of the kind in question; i.e. an English word which has grown out of a Norse middle voice; itself deduced from the combination of a verb with a pronoun almost unknown in Anglo-Saxon.

The general reasoning against this view will be given in the Preface. It consists chiefly of the presumptions against any given words being of Norse origin; presumptions which, in the mind of the present writer, are very great. But as the opposite doctrine is held by many respectable authorities, to whom the influence of the Danish or Norse language upon our own appears to have been considerable, it is necessary in the present place for the objection to be more specific.

Now a little enquiry will show us that the date of the Danish invasions is scarcely the date of the origin of the Norse form in *-se*.

The earliest specimens of the Norse, with the exception of a few pieces of verse which, in respect to their form, we have no

reason to believe are older than the prose in which they are quoted, are no earlier than the time of Henry II. in England; a time at which, with the exception of Shetland and Orkney, we may fairly presume that no Norse was spoken in Great Britain, certainly none in England. In these however the evolution of the forms which have been under notice is only beginning. Thus:

Sik, se, st, or s, the pronominal element in the combinations which have just been considered, though a reflective pronoun, is in the first instance the reflective pronoun of the *third person only*. Hence, before it can become incorporated with the verb, and serve as the reflective for *all three persons*, certain preliminary changes are necessary. The natural Reflectives in English for the First Persons are, 'I strike (*my*)self; we strike (*our*)selves; wherein the Pronoun which is governed, or the object, is in the same Person as the Pronoun which governs, or the subject. In other words, they are names of the same individual: and of the two facts, namely, that of A giving a blow, or being the striker, and receiving a blow, or being the person struck, equal notice is taken. By thinking however less of A in his character of agent, and more of him in his character of patient, we lose sight of the necessity of this agreement (i.e. that of Person between the two Pronouns); and a series of changes, different in detail according to the language, takes place. Sometimes the possessive element (e.g. *my*) is omitted, and the import of what remains (e.g. *self*) becomes indefinite. In general, however, the Reflective Pronoun of the Third Person, as being the one which is most used, supersedes the other two. It does so in some of the German provincial dialects, where *sich* is used with the First and Second Persons of both numbers. It does so in Greek where not only *se* can be found for *ip̄i* and *oi*; but where *tautoi* is found for *ip̄i* and *oi*; and it did so in the later Icelandic and its derivatives. In short, it is supposed to do so in such expressions as *bush thee*, *I bushed*, &c. But all this implies so many stages in the history of the combination: the first, in which it is purely Reflective; the others, wherein it is partially Reflective; but, in the main, Middle with a Reciprocal, Deponent, or Passive sense. Now in the earliest Icelandic of which we have specimens, the Icelandic of the Edda, which, whatever may be the antiquity of its matter, is in point of form the Icelandic of the time subsequent to the Norman conquest of England, and the date of the extinction of the Danish in England, the combination is only in its *first stage*, the Edda giving forms like *hugðauk = hugð + mik* (*mik* = me), wherein the supremacy of the Third Person is scarcely beginning to show itself. Yet forms like *bush*, supposing the *s-k* to give the Reflective Third Person, imply that it was supreme some two centuries earlier. This is not impossible; nor is it impossible that with the element *sik*, and the same habits of combining it with the Verb and letting it prevail against the other two, the development of a Passive or Deponent may have begun earlier in the Norse of England than in that of Scandinavia. Still, as the presumptions are against it, it is suggested that the foregoing details, details

which have never been fully considered, constitute an objection to the current doctrine. So late as the beginning of the thirteenth century, this was not the case. On the contrary, we find in the Norse of the Edda forms equivalent to *bua mik* = prepare (my)self, and *bua þik* = prepare (thy)self; forms which, if they were predominant in the Danish of the time of their invasions of England, are, to say the least, unlikely elements of the word in question.

Still, the main argument against the view here combated lies less in the minute history of the present Norse or Scandinavian Passive, than in the general fact of the Danish having had but little influence on the literary English; a point upon which there are extreme and opposite opinions, those of the present writer being adverse. Upon this, however, more will be found in the Preface.

The doctrine now suggested is, that *Busk* is much such a word as *brace* or *gird*, i.e. a word applied to denote preparation from the settling of some part of the dress; in which case a *busk* is the ordinary Substantive (like *girdle* and *brace*), and to *busk* is to be busied about it. If so, all such Participles as *borne*, *boon*, *bound*, be on the way for a place, are connected, not with the element *bu-*, but with the root of *bow* = bend.]

(Neumann.) The same change from *l* to *r*, as in *bolza*, *bolzo*, given Italian, *borzacchini*, Dutch, *broeckje* (French, *brodequin*), English, *buskin*. In

Buss. s. Colloquial for Omnibus.

Buss. s. [from German, *busse*; Dutch, *buysse*.] Bait for fishing.

It was a sea most proper for whale-fishing: little
busses might cast out nets for sunfish and herrings.
— *Bishop Hacket, Life of Archbishop Williams, p. 82: 1803.*

If the king would enter towards building such a
number of boats and busses, as each company could
easily manage, it would be an encouragement both
of honour and advantage. *Sir W. Temple.*

Buss. s. [from Lat. *busium*; a derivation which at the first view suggests the propriety of spelling it with a single *s*. By so doing, we not only favour the correct notion of its origin, but distinguish it from *buss*, meaning a kind of boat.

The same applies to *Bus* = Omnibus.

Of the Verb the pronunciation is uncertain; the final *s* being sometimes pronounced with its ordinary sound, and sometimes as *z*. The latter power is strictly grammatical, inasmuch as it is a rule that Substantives ending in a sharp, or surd, mute may change it into a flat, or sonant, one, and become Verbs: as *grease*, *greaze*; *use* pronounced *uce* and *use* pronounced *uze*, along with others. Hence the distinction between *bus* = a *kiss* and *bus* (sounded *buz*) = to *kiss*, is probable. At the same time the principle of attempting a distinction between *bus* = to *kiss*, and *buzz* = to make a buzzing sound, has a tendency to keep the pronunciation of the Verb and Substantive alike. Upon the whole, however, it is best to use the double *s*. This is because English spelling is little more than a system of orthographical expedients. Now, the common method of showing that a vowel is short, is to double the consonant which follows it, whether actually sounded, which is rarely the case, or not. With monosyllables this is hardly necessary; and if *buss* were one of the uninflected parts of speech, an adverb, a preposition, or a conjunction, the single *s* might suffice, as it does with *but*. The case is altered, however, when the word is a Substantive or a Verb; inasmuch as out of these may be evolved plural numbers or participles, such as *buss-es* or *buss-ing*. In this case a syllable is added; and, if the spelling were *buses* or *busing*, there would be the danger of the first syllable being sounded long, i.e. like the second

syllables in *a-bused* and *a-busing*. Hence, the double *s*, in spite of the reasons to the contrary derived both from the derivation and the principle of distinguishing between words sounded alike, is preserved. For further application of this principle, see Butte.] Kiss; salute with the lips.

Thou dost give me flattering *busses*.—By my troth, I kiss thee with a most constant heart.—*Shakespeare, Henry IV. Part II. ii. 4.*

Busto. s. [Italian.] Statue. See Bust.

[The *bust* is properly the body of a man, the trunk with-
out arms or legs, then a statue representing the head
and upper part of the trunk. The word *bust* was
used in the North of France in the same sense.
'Le buste de St. Sulpice en en chaise du dit Saint
de Saint Supérieur sont en bon état.' (Hécart, A.D.
1774.)

Both *bust* and *bust* were then used in the sense of a
body garmented, a garment closely fitting the body,
and as this was supported by a stiff bone or steel in
front, the word *bust* has ultimately been confined to
the piece of bone, wood, or steel in the front of a
woman's stays or stomacher. French, *bu*, *bust*, *bustier*,

Widker was treated less respectfully. William
thought him a *busybody* who had been properly
punished for running into danger without any call

Busybodyism. s. Habit or character of a busybody.

and *busybodyism*. *Coleman, Table Talk.*

Busyless. adj. At leisure; without business; unemployed.

These sweet thoughts do even refresh my labours;
Most *busyless* when I do sit.

Shakespeare, Tempest, iii. 1.

[So stands the text in the previous editions; giving us not only the word under notice, but Shakespeare as the authority for it. The must, however, that can be said upon this last point is, that it is a *probable* Shakespearean term. All that is *certain* is that it is a conjecture of Theobald's; a conjecture which has probably been approved oftener than condemned. Yet, as a derivation, it is faulty. The proper use of *-less* is to stand as an affix to a substantive, denoting the absence of the character which that substantive suggests. *Noiseless* means 'without noise,' and the strictly grammatical compound meaning 'without business' is the awkward word *businessless*; there being not only no such substantive as *busy*, but a good reason against coining one, viz. the fact of *-y*=A.S. *-ig*, being a characteristic adjectival ending.]

Busyness. s. [In origin the same as *Business*; in meaning different. Different also, in sound. The present word, denoting simply the attribute suggested by *busy*, is a trisyllable in which the middle vowel should be heard. In the other compound (i.e. *business*=affairs, employment, &c.) the pronunciation is *bizness*. As a synonym for this latter word the compound under notice is obsolete. As a *modern* compound its meaning approaches *Busybodyism*; as may be seen from such a sentence as '*Busyness* (i.e. excess of active interference) is a bad quality in *business*.' Should the word be found necessary it may be conveniently spelt with a *-y*.] Attribute suggested by *Busy*. *Obsolete.*

But, conj. [A.S. *bute*, *butan*; itself a compound, of which the elements are the *b*, as in *be-side* or *be-sides*, and the *ut* of *out*. For a triple compound into which the same element (*-b-*) enters, see A butt. In Low German there is the corresponding form *binnen* = within, inner, or internal. The doctrine propounded by Horne Tooke, that the first element is the imperative mood of the so called substantive verb, is only noticed because it still finds numerous adherents, and because it needs special condemnation.] Unless.

Ah me! said Paridell, the signs he sad;
And, but God turn the same to good soothsay,

Spenser, Faerie Queene, lib. 8, 50.

I must wait
And watch withal; for, but I be deceiv'd,
Our fine musician groweth amorous.

Shakespeare, Taming of the Shrew, lib. 1.

To the notion of 'outness,' or 'externality,' suggested by the etymology, all the secondary meanings may be referred; the chief difficulties connected with the word being, not so much the etymological origin of a given signification, as the grammatical form in which that signification is conveyed; in other words, it is often difficult to say what the word *But* is, as a Part of Speech.

It is generally a Conjunction, often a Preposition, sometimes an Adverb; whilst, in many instances, its construction is equivocal or ambiguous: e.g. it may be a Conjunction, or it may be something else. Upon this, however, more will be said under the next entry. Of course too, like every other particle in the language, it may be a Substantive. We may say, 'None of your *buts*,' i.e. none of your objections expressed by the word *but*; just as we may say, 'None of your *ifs*,' i.e. doubts expressed by that particle. See remarks on *but yet*; see also *But*, *v. n*.

Bearing in mind the fundamental notion of 'exclusion,' we shall find that the commonest use of *But*, as a clear and undoubted conjunction, is to introduce a second proposition, in which some exception is taken to the first; the first being one of a *general* character. From this the second *excludes* something; and by so doing limits it. It admits, however, all that it does not exclude. Hence, wherever we find the Conjunction *But*, we find (1) two propositions, (2) one which is more general than the other, and (3) one in which this generality, though admitted up to a certain point, is objected to and limited.

It is true that all money is wealths. (*But*) I deny the converse. . . that all wealth is money.—*Whately, Logic*, ii. 2, 8.

When two or more things are connected by resemblance or analogy they will frequently have the same name. Thus a blade of grass or the contrivance in building called a dovetail are so called from their resemblance to the blade of a sword, and the tail of a real dove. (*But*) two things may be connected by analogy, though they have in themselves no resemblance; for analogy is the resemblance of ratios (or relations): thus, as a sweet taste gratifies the palate, so does a sweet sound gratify the ear; and hence the same word *sweet* is applied to both, though no flavour can resemble a sound in itself. So, the leg of a table does not resemble that of an animal; nor the foot of a mountain that of an animal; (*but*) the leg answers the same purpose to the table, as the leg of an animal to that animal; the foot of the mountain has the same situation relatively to the mountain, as the foot of an animal to the animal.—*Ibid.* lib. iii. 816.

The parentheses in the preceding extract

are the editor's, and inserted in order to show the distinctness of the propositions.

Upon this limiting power one of the notices of the previous editions is founded: viz. *But*, a 'particle which introduces the minor of a syllogism.'

If there be a liberty and possibility for a man to kill himself to-day, then it is not absolutely necessary that he shall live till to-morrow; *but* there is such a liberty, therefore no such necessity.—*Bishop Bramhall, Against Hobbes*.

God will one time or another make a difference between the good and the evil. *But* there is little or no difference made in this world; therefore there must be another world, wherein this difference shall be made.—*Watts, Logic*.

The major premiss is, of course, the more general proposition, which is in part admitted, and in part objected to.

If this more general proposition were always *explicitly* exhibited, the construction of *But* would be simple enough. Instead however of this being the case, it is frequently only implied or suggested; and then it is often a matter of difficulty to determine what that general proposition really is. It is often involved in a long and unconnected context; indeed, at times it is only suggested or dimly shadowed out. Thus:

If every increase of population is desirable, some misery is desirable; *but* no misery is desirable; therefore some increase of population is not desirable.—*Whately, Elements of Logic*.

Here the proposition which *but* refers to is only hinted at.

Again, in the very first proposition of Euclid we find:

Because the point A is the centre of the circle BCD; therefore AC is equal to AB. And because the point B is the centre of the circle ACE; therefore BC is equal to AB. *But* it has been proved that AC is equal to AB; therefore AC BC are each of them equal to AB. *But* things which are equal to the same thing are equal to one another, &c.

Here, *but* means: 'this is the place for a fresh part of the demonstration; *but*, as it has already been either given or assumed, no notice need be taken of it.'

The same applies to

Must the heart, then, have been formed and constituted, before the blood was in being? *But* here again, the substance of the heart itself is most certainly made and nourished by the blood, which is conveyed to it by the coronary arteries. *Bealby*.

This means that from the preceding train of reasoning a presumption has been established in favour of the heart having been older than the blood, as the illative conjunction *then* sufficiently shows. To this presumption (a general *prima facie* view) the *but* conveys an exception; showing that the nutrition of the heart itself had been *excluded* from the consideration, i.e. laid out of it.

In Whately's Rhetoric (and from the works of that influential writer, the illustrations have been taken almost at random) two successive sections *begin* with this word:

But in the second place, not only does a reward for Energy require that we should not use terms more general than are exactly adequate to the objects spoken of, but we are also allowed, in many cases, to employ less general terms than are exactly appropriate.—*Whately, Elements of Rhetoric*, pt. iii. ch. ii. § 2.

But to proceed with the consideration of Tropes: the most employed and most important of all these kinds of expressions which depart from the plain and strictly appropriate style—all that are called and limited sense; viz. a word substituted for another, on account of the resemblance or analogy between their significations.—*Ibid.* § 3.

Here the word applies to something said many sentences before, in which both Energy and Tropes were spoken of more generally, whereas they have now to be spoken of more particularly.

This shows that the conjunctive chan-

acter of *But* is obscure in proportion as the second proposition is implicit and inferential and clear. It is eminently so in such a sentence as the following from Bacon (quoted by Whately):

Men imagine that their minds have the command of language; (*but*) it often happens that language bears rule over their minds.

Here the two propositions form two independent sentences; the second requiring nothing from the first except 'men' the antecedent to the word 'their,' which is easily supplied. The same is the case with the dictum of Dr. Johnson:

There are objections against a plenum and objections against a vacuum; (*but*) one of them must be true.

In

Many are called; (*but*) few chosen, the second clause is not so quite independent; inasmuch as it requires the 'are' from the first to make it grammatical. The following from Swift is less explicit still:

Our wants are many, and grievous to be borne, *but* quite of another kind.

Here, in order to make 'quite of another kind' into a proposition, we must supply what precedes; not only 'are,' the copula, but 'our wants,' the subject.

The clearness, then, of the construction is susceptible of degrees; the measure being the amount of matter required to expand a complex and elliptical pair of propositions into two independent and complete ones. When one of these is little more than a matter of inference, or when (as in the extracts from Whately where *But* begins a section) it is not only inferential but placed in a different part of the work, the obscurity approaches its maximum, which it reaches when, in addition to these elements of uncertainty, we get elliptical expressions, along with other obscurities of which notice will be taken under the Prepositional and Adverbial powers of the word under consideration, which notices form the complement to this criticism.

Under the present head it is enough to state that the exception taken by *But* may be *strengthened*. This is done by adding a second particle, such as *yet*, *nevertheless*, *rather*; the result being a combination which requires analysis.

The first point which strikes us in respect to them is, that the second word, whatever it may be, has practically much the same import as the word *But* itself. This is because while *But* simply denotes the existence of an exception or limitation, the superadded word indicates the manner or mode in which it is made. *Rather*, for instance, indicates a comparison with some other alternative; *nevertheless*, a certain presumption in favour of the opposite view. And so on with the rest.

The next point is, the fact of this expression of *modality* being Adverbial rather than Conjunctive; the Adverbial character being eminently clear and evident in such words as *rather*, *instead*, &c.

This is not as you suppose;

(*but*.)

Rather, the contrary.

Here, *rather* — more preferably, more readily, more easily, or the like.

Again,

Don't do this;

(*but*.)

Instead, do what I advise.

Here, for *instead*, we may write in place of what you contemplate.

At the same time the Adverbial character changes with each word; and, when we get

to such as *yet*, nevertheless, the apparent grammatical construction gives us little more than either one Conjunction strengthened by another, or a tautology; one construction passing into the other imperceptibly.

Then let him speak, and any that shall stand without shall hear his voice plainly; *but yet* made extreme sharp; and exile, like the voice of puppets; and yet the articulate sounds of the words will not be confounded.—*Bacon, Natural and Experimental History.*

But yet, madam—
I do not like *but yet*; it does only
The good precedence; the upon *but yet*!
But yet is as a snail to bring forth
Some monstrous malfactor.

Shakespeare, Antony and Cleopatra, li. 5.
It is clear that in each of the preceding extracts we may omit either of the two words *but* and *yet*. If so, and if one be conjunctive rather than adjectival, it is clear that, when one is eliminated, we have either (1) two propositions connected with each other by means of a Conjunction *between* them, or (2) one complex proposition in which the one clause contains and implies an intermediate Conjunction *understood* from the context. Hence, Conjunctions take the guise of Adverbs, and Adverbs of Conjunctions. For more on this see *But adv.*

With *but* if we have really two Conjunctions; unless, indeed, were fine upon the construction and say that the only true Conjunction is *if*, and that *but* is an Adverb showing that the hypothetical connection between the two clauses of the sentence to which it belongs partakes of the nature of an exception or limitation to something implied in something elsewhere. If so, it is modal and adverbial rather than purely conjunctive. Still, few would say that in such combinations *but* is an Adverb. The right view probably is the following, viz. that when we meet with two true Conjunctions (e.g. *but if*) we have not two *but* four propositions, or rather two pairs, i.e. two (one pair) implied by *if*, and two (one pair) implied by *but*. A third pair is suggested by *then*; *but* upon this it is not necessary to enlarge.

- (a. Provided that A is B,

Such is the ordinary construction in such combinations as 'If it prove fine, I shall go out; (*but*,) if it rain, I shall stay at home.' The following extract, however, gives us specimens of an obsolete combination = useless.

I wold breake thy head *but if* thou get thee hence.
Udall, Plumes from Latine: 1533.
No living aide for her on earth appeares,
But if the heavens helpe redresse her wrong.
Spenser, Faerie Queene, iv. 7, 23.

The following is, probably, an imitation of the Greek idiom by which *ὅτι . . . ἀνάγκη* = *ὅτι μὴ* . . . ἀνάγκη. At any rate, the full English would be: 'for it does not only most commonly safeguard the man; *but also* always,' &c.

Courage is the greatest security; for it does most commonly safeguard the man, *but* always rescues the condition from an intolerable evil.—*Jeremy Taylor, Rule and Exercises of Holy Living, in. 4.*

But. adv. [see *But, conj.*] Only; merely; simply.

I am, my lord, *but* as my betters are,
That led me hither.

Shakespeare, King Henry IV, Part II, iv. 3.
Thus fights Ulysses, thus his name extends.
A formidable man *but* to his friends. *Dryden.*
Berce *but* now [just now] I left. *Id.*

A genius so elevated and unconfined as Mr. Cowley's was not necessary to make Pindar speak English.—*Id.*

Did *but* men consider the true notion of God, he would appear to be full of goodness.—*Archbishop Tillotson.*

The mischiefs or harms that come by play, inadventence, or ignorance, are not at all, or *but* very gently, to be taken notice of.—*Locke, Thoughts on Education.*
It is evident in the instance I gave *but* now [just now].—*Locke.*

If a reader examines Horace's Art of Poetry, he will find *but* very few precepts in it, which he may not meet with in Aristotle.—*Addison, Spectator.*

All the preceding extracts from the previous edition verify the statement made under *But, conj.*, that in every case we may first write *but only* in full, and then omit either particle; the sense remaining the same, except so far as, if we omit *but*, we get two clauses of one proposition connected by an Adverb expressing the manner or mode of their connection; and, if we omit *only*, we get two propositions connected by a Conjunction but without any modality, i.e. without learning whether the form which remains gives us the *only* connection. In most cases it does. Hence, *only* is a fair equivalent for *but*—*but only*, minus *only*. But its meaning is given by the general context, rather than by the text of the extract itself.

Thus, in the extract from Dryden, it is by no means certain from the text itself that it is *only* to his friends that Ulysses is formidable. It might have been that Ulysses was a bad ally, because he was *equally* dangerous to friend and foe. If so, *only* is out of place: for the meaning is

Ulysses is formidable,
(*but*)

He is formidable on the wrong as well as on the right side.

In which case *but* is a Conjunction.

In another of the extracts (given here instead of in the context of the last edition) we find

What nymph see'er his voice *but* hears,
Will be my rival though she has *but* ears.

R. Jonson.

The meaning is obscure. Though *but* = *only*, it seems as if *though* were the wrong word, or as if the whole combination meant *provided only*.

In another of the original extracts:

To think *but* nobly of my grandmother:
but = otherwise than.

The full criticism of this word still requires further remarks under *But, prep.*

But. prep. [see *But, conj.*] Except.

The cases wherein the word *but* comes before us in respect to its parsing, and wherein the question arises as to whether it is a Conjunction or a Preposition, fall into two classes, as may be inferred from consideration of the conditions which determine the construction; the fundamental rule being this:

When the noun which follows is in the Nominative case, *But* is a Conjunction; when in the Accusative (or Objective) a Preposition.

This is because, with a Nominative case, we have a second subject, to which the preceding proposition or clause supplies a copula and predicate; and, as long as the noun is nominative, this understood complement is possible. The grammarian who would parse such a sentence as 'All ran away *but* John,' is free to maintain that the construction, if given in full, would be,

'All ran away,
but
John [did not run away].'

the parts between brackets being supplied from the context, or understood. Such being his view, he would, if he translated it into literal Latin, write,

'Omnes fugerunt,

Johannes [non fugit].'

Here *but* = *sed*, a conjunction; and the result is two propositions, of (what is necessary to be noticed) two different Qualities; i.e. one being negative, the other affirmative. Of these the second is represented by the subject only, the predicate being supplied from the first, and the negative element from the word which stands between the two; the function of which being to express an exception, qualification, or partial contradiction, gives the difference of Quality which is characteristic of propositions of this kind.

But what if *John* be treated as an accusative? or (what is the same thing) what if *but* be rendered in Latin by *præter* or *excepit*? In that case there is no possibility of framing a second proposition at all; inasmuch as there is no second subject; *but*, on the contrary, only a greater amount of complexity in the single one, which is

Subject.	Copula and Predicate.
'All except John,	fled.'

In Latin,

'Omnes, præter Johannem, fugerunt.'

To these notices, exhibiting the fundamental fact of the opposition in Quality of either the two propositions or the two parts of a single proposition, in all cases where *But* either is or can be treated as a proposition, it need only be added, with reference to the quotations from Smith and Goldsmith given below, that a question to which there is but one answer, and that negative, is for the present purpose an actual negation. 'Who can it be *but* Lyccon?'—'It is no one *but* Lyccon.'

Who can it be, ye gods, *but* perjurd Lyccon?
Who can inspire such storms of rage, *but* Lyccon?
Where has my sword left one so black, *but* Lyccon?
E. Smith, Theodos and Hippolytus.
Your poem hath been printed, and we have no objection but the obscurity of several passages, by our ignorance in facts and persons.—*Nesft.*
Our modern birds, why what, a pox,
Are they *but* senseless stones and blocks?
Goldsmith.

See *Except, prep.*

Such the rule; a rule which is purely logical. How far it carries us depends upon the nature of the language to which it applies. In the Latin or Greek it would carry us far, because in those tongues the nominative case is formally distinguished from the oblique ones; e.g. *Johannes* (in the foregoing illustration) as contrasted with *Johannem*. In the English, where, as a general rule, there is no such distinction, it helps us but little. That in many instances, where there is no sign of case, the construction from one point of view is far more natural and simple than it is from the other, is beyond doubt.

In English, however, a test so precise and definite as to preclude any reasonable difference, is wanted; and this is not to be found, except in one class of words, viz. those pronouns in which the difference between the nominative and objective cases is expressed by a difference of form: *I, me; thou, thee; he, him; she, her; we, us; ye, you; they, them*. Here, and here only, is the construction absolutely unequivocal.

Such being the fact, we have the following test.

In any doubtful sentence, change the noun which follows But into a proper name; and then change the proper name into a pronoun. In the extract under 2 part of this operation is performed already. For *Lycan*, then, write *he* or *him*, and see which reads best. If the nominative case give the simpler sense, But is a Conjunction; if the objective, a Preposition. Thus the possible answers to the question

Is John ready?

are,

No! we are all ready *but* *him*;

and it is probable that few persons could tell without reflection which of the two he would give. In writing, the nominative is the commoner, e.g.

Away went Gilpin—who *but* *he*?
His name soon spread around;
He carries weight, he rides a race!
‘Tis for a thousand pound.

Cooper.

That *he* is right is beyond all doubt; the position of *him* is less certain. In the opinion of the editor, the prepositional use of But is little less defensible than the prepositional use of *than*; of which the doctrine is as follows. So good a writer as Prior supplies us with the following lines:

Thou art a girl as much brighter than *her*,
As he was a poet sadder than *me*;

lines which give us an authority for a strange usage, or an instance of bad grammar in a good writer, according to the critical temperament of the reader. Whichever view be taken, the fact of prepositional meanings and conjunctive meanings being closely allied, and passing imperceptibly into each other, is the primary fact in the eyes of the critic who, taking human speech as he finds it, accommodates the grammar to the language rather than the language to the grammar. Further observations on this point will be found under *Except, prep.*

Another combination of But is with the infinitive mood of the verb:

And here on this delightful day,
I cannot choose but think
How oft a vigorous man I lay
Beside this fountain's brink. *Wordsworth.*
The wedding-guest sat on a stone,
He cannot choose but hear,
When this spoke on that aged man,
The bright-eyed marriage.

Coleridge, *Ancient Mariner.*

Here, as the verb is in the infinitive mood, its construction is that of a substantive.

The prepositional construction can be extended to whole clauses; i.e. a whole sentence may be treated as a single word.

Rash man! forbear, *but* for some unbelief,
My joy had been as fatal as my grief. *Waller*
Her head was bare,
But for her native ornament of hair,
Which in a simple knot was ty'd above.

Dryden, *Fables.*

When the fair boy receiv'd the gift of right,
And *but* for mischief, you had died for spite. *Id.*

This leads to another construction; the combination of *but* with *that*: the full details of which are connected with the latter word rather than the former (see *That, conj.*). The general principle, however, which guides us in this intricate philology is the fact that the word *that* may stand for a whole clause or proposition.

In the following extracts the several secondary clauses are: (1) The fact of the emission of certain virtues being avouched, &c. (2) The fact of an account being taken of the navy, &c. (3) The fact of there being no suspicion that the humour would waste itself. To these several facts the word

that applies; indeed, it is a short term for them. So far as it is this, it is Pronominal; whilst, so far as it stands between the two propositions and connects them it is a Conjunction. As a Pronom. however, it may be governed by a Preposition, which *but* in such constructions may be considered. Hence, as *that* may represent a whole proposition, the combination *but that* is very common.

An emission of immaterial virtues are a little doubtful to propound, it is so prodigious; *but that* it is so constantly avouched by many.—*Bacon.*
They made no account, *but that* the navy should be absolutely master of the seas.—*Id., War with Spain.*

I fancied to myself a kind of ease in the change of the puerosity; never suspecting *but that* the humour would have wasted itself.—*Dryden.*

When *that* is omitted, which is often the case, we get such constructions as the following; in each of which it is clear that the word *that* could be inserted.

And *but* infinity,
Which waits upon worn times, hath something seiz'd
His wish'd ability, he had himself

Butcherbird, s. [see last extract.] Bird
of the genus *Lanius* (called also *shrike*),
of which there are three British species:
1. *L. excubitor*, or grey shrike; 2. *L. col-*
lurio, or red-backed shrike; 3. *L. rutilius*,
or woodchat.

The next bird that I procured (on the 21st of May)
was a male red-backed *butcher-bird*, *Lanius collurio*.
My neighbour, who shot it, says that it might easily
have escaped his notice, had not the outcries and
chatterings of the white-throats and other small
birds drawn his attention to the bush where it was.
The crow was filled with the legs and wings of beetles.
—*White, Natural History of Selbourne, vol. 20.*

The grey shrike feeds upon mice, shrews, small
birds, frogs, lizards, and large insects. After having
killed its prey, it fixes the body in a forked branch,
or upon a sharp thorn, the more readily to pull off
small pieces from it. It is from this habit of killing
and hanging up their meat, which is observed also
in other shrikes, that they have been generally
called *butcher-birds*. . . The red-backed shrike [is]
another species of *butcher-bird*, very similar in its
habits to the grey shrike.—*Yarrell, British Birds.*

[French, *butillier*, as if from *butille*, a bottle, the servant in charge of the bottles, of the wine and drink. But the name must have arisen before the principal part of the drinkables would be kept in bottles, and the real origin of the word is probably from *buttery*. Butler, the officer in charge of the *buttery* or collection of casks, as *Butler*, the officer in charge of the pantry. *Buttery*, from *butl*, a barrel; Spanish, *buterin*, the store of barrels or wine skins in a ship.—*Wedgwood, Dictionary of English Etymology*.]

It is common at Berwick and Yarmouth; at which latter place it is called a *butt*—a northern term; and these flounders which are caught in the extensive backwaters behind Yarmouth, where there is a considerable deposit of mud, are, in consequence, so dark in colour as to be distinguished from the lighter-coloured ones caught on the sands of the sea by the name of Black Butts.—*Tarrell, British Fishes*.

1. Thick end of a musket, pistol, fishing-rod, or similar object; extremity of any plank which joins to another endwise on the outside of a ship.

But, if I ask you what I mean by that word, you will answer, I mean this or that thing, you cannot tell which; but if I join it with the words in construction and sense, as, but I will not, a butt of wine, *butt* and boundary, the ram will but, shoot at butt, the meaning of it will be as ready to you as any other word.—*Holder*.

(Dict. Etym.) Butt-end. *s.* [two words rather than a compound.] Blunt end of anything; end upon which it rests.

On entering the broken ground, the creek turns more to the westward, and crosses by two remarkable *buttes* of a red conglomerate, which appear at a distance like tables set in the mountain side.—*Barton, Mexico and Rocky Mountains*, p. 211.

[*Butte* (French). This word is of frequent occurrence in books that relate to the Rocky Mountains and Oregon regions, 'where,' says Col. Fremont, 'it is naturalized, and if desirable to render into English, there is no word which would be its precise equivalent. It is applied to the detached hills and ridges which rise abruptly, and reach too high to be called hills or ridges, but not high enough to be called mountains. Knob, as applied in the Western States, is the most descriptive term in English; but no translation or paraphrase would preserve the identity of these picturesque landmarks.' (Exposition to the Rocky Mountains, p. 145.)—*Bardell, Dictionary of Americanisms*.]

The criticism that applies to the *ss* in Buss-*ss*, applies here. Just as monosyllabic Substantives in *-ss* become dissyllables in the plural; so do monosyllabic Verbs in *t* become dissyllables in the Participle and the Preterite Tense: *buss*, *busses*; *butt* and *butted*. Hence, notwithstanding the differences of origin, all the forms under notice are spelt with *tt*.

Butter. *s.* [A.S. *buttere*; Lat. *butyrum*; Gr. *βούτυρον*.]

1. Unctuous substance obtained by agitating the cream of milk till the oil separates from the whey.

I heard a rattling of diables and plates—the back

drawing-room was the dining-room—I heard Daly superintending, and the great doll whispering—a confused sound of 'the butterfly-there'—a mild, the musical at top,—and a sort of hostile-inimical kind of confusion, &c.—*Theodore Hook, Gilbert Gurney*, vol. iii. ch. ii.

Butterbar. *s.* Plant so called (Tussilago Petasites).

Butter-bar is called in the Greek *scorpius* of the hugeness of the leaf, which is like *scorpius*, a but; the Latins call it *Petasites*; in High Dutch, *Pestle-wurts*; in Low Dutch, *Duckelholzen*; in English it is named *Butter-barre*. It is very manifest that this is like to coltsfoot, and of the same kind. *Butter-barre* is hot and dry in the second degree, and of thime parts. The roots of *butter-barre* stamped with ale and given to drinke in pestilent and burning fevers, mightily cooleth and abateth the heate thereof.—*Gerarde, Herball*, p. 814; 1633.

Buttercup. *s.* [see Butterwort.] Native Ranunculaceae plant so called.

(That the name applies to, at least, four closely allied species, *Ranunculus acris*, *repens*, *bulbosus*, and *hirsutus*, is certain. It also applies to the *Ranunculus Ficaria*; and, perhaps, to *R. auricomus*.)

The application, however, is indefinite. The first four species (with divided leaves) have all another name, *Crowfoot*; whilst the *Ranunculus Ficaria* is in the same predicament, being called *Pilewort*. Each of these terms is appropriate; *Crowfoot* suiting the *Ranunculi* with divided leaves, and *Pilewort* the *Ranunculus Ficaria*; the resemblance to piles being suggested by the roots.

They suit, too, *exclusively*; i.e. *Pilewort* is inapplicable to the *Crowfoot*, and *Crowfoot* to the *Pilewort*.

Kingcup is another name for the *Crowfoot*; whilst the *Goldilocks* (*Ranunculus auricomus*) is really but another *Crowfoot*. With these synonyms it is clear that *Buttercup* is a superfluous, as well as an indefinite, name. Yet it is common. The typical *Buttercups* are probably, the *Ranunculus acris* and *bulbosus*; the species to which the application of the term is the most doubtful being the *Ranunculus Ficaria* (*Pilewort*) and *R. auricomus* (*Goldilocks*). That the name comes from the yellowness of the flower combined with its appearance at the time when the grass is best for butter, notwithstanding the exception suggested by the last extract, is probable. That the yellowness, however, of the butter is due to the *Buttercup* is a popular error, the whole genus of the *Ranunculi* (indeed the entire class to which they belong) being acrid poisons and avoided by cows.)

'Are they very pretty, Boh?' She called him Boh by his own particular request and instruction. —'Lovely. Full of flowers. There's *buttercups*, and there's daisies, and there's' the turnkey hesitated, being short of floral nomenclature. 'There's dandelions, and all manner of games.' —*Dickens, Little Dorrit*, ch. vii.

Several varieties of the *buttercup*, the common daisy, the ragged robin with its delicate pink, and the white *Cardamine pratensis*, afford never-failing contrasts to the green fresh grass.—*André, The Chateau d'Audoubert*, p. 170.

And daisy there, no d cowslip too, And *buttercups* of golden hue, The children meet as soon as sought, And gain the hill as soon as thought.

Village Minstrel. *Buttercup*, not, perhaps, from *butter* and *cup*, but rather more probably from the French *bouton d'or*, the bachelor's button, a name given to its double variety, the cup being the old English cup. . . . It will have originally meant *button-head*.—*Dr. Prior, Popular Names of British Plants*.

Butterfingers. *s.* [two words rather than a compound.] Colloquial or slang term addressed to anyone who lets slip what he ought to hold or catch.

When, in the executioner lifting the head of the seventh traitor, as the preceding six had been lifted to the public gaze, he happened to let it fall, cried 'Ah, clumsy!'—'Halloo, *butter-fingers*!' were heard

from various quarters of the assembly.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. i.

Butterfish. *s.* Fish so called (*Gunnellus vulgaris*).

What your Cornish *butterfish* (*Gunnellus vulgaris*) is, I know not. I a little suspect it will prove the same with our sea-sunil, if years were into oil as ours do.—*Rog. Correspondence, Letter of Mr. Johnson*, p. 129.

The spotted murrel, or *butterfish*, as it is frequently called, from the consistence and quantity of mucus secretion with which its sides are covered, is sufficiently distinguished from the blennies by its dorsal fin, . . . from which it has obtained in the Orkneys and in some other countries of the North of Europe the names of *Suorlick*, . . . *elisk* in Norway, from a supposed resemblance in shape to the blade of a sword.—*Yarrell, British Fishes*.

Butterflower. *s.* [see Butterwort.]

Crowfoot is called by *Ladl Ranunculus pratensis* . . . in English, *King Kule*, *Gold cups*, *Gold knolls*, *Crowfoot*, and *Butter-flourcs*.—*Gerarde, Herball*, p. 952; ed. 1633.

What they say betwixt their wings?

Or in stillest evenings

With what voice the violet wags

To his heart the silver dew? —*Tranquilo*.

Butterwort. *s.* Plant so called of the genus *Pinguicula*.

The second is called *Pinguicula*, of the fatness or fulness of the leaf, or of fatness; in Yorkshire, where it doth specially grow, and in greatest abundance, it is called *Butterwort*, *Butter-root*, and *White root*; but the last name belonged in more propriety to *Solomon's seal*.—*Gerarde, Herball*, p. 789; ed. 1633.

'Sed mox ingentia saxa

Ruitit cabulata.' (Thib.)

From the sense of a projectile engine the designation was easily transferred to the strong rope by which the strain of such an engine was exerted.

'Quocessant, . . . obsecracionem saxorum doliorem suis instrumentis, subiect *cabulis* et undasio tantum.' (DuRoi, Dicit.)

Examples of the fuller form of *cable* in the sense of cable are not given in the dictionary, but it would seem to explain the Icelandic form *kabul*, a rope or cable. It is remarkable that the Icelandic has *kabul*, a rope, string, band, and the Arabic *habl*, a rope, would correspond to *cable*, as the Turkish *bayrak* to *banner*.—*Wedgwood, Dictionary of English Etymology*.]

Cáble, *adj.*

1. Fastened with a cable.

While they, her flattering creeks and opening
Caution approaching, in Myrina's port
Cast out the *cabled* stone upon the strand. *Dyer.*

2. In Heraldry.

Cabled, in Heraldry, is applied to a cross formed of the two ends of a ship's cable; sometimes also to a cross covered over with rounds of rope; more properly called a cross corded.—*Rees, Cyclopædia*, in voce.

Cáble, *s.* [Fr. *cablot*.] Tow-rope.

Cable, in sea-language, denotes any cable-haul rope under nine inches in circumference.—*Rees, Cyclopædia*, in voce.

Cábling, *verb. abs.* Ornament with which the flutings of a column are sometimes filled to one third of their height.

Cabling, in Architecture, is the figure of a staff or rod, either plain or carved in resemblance of a rope or rush, wherewith the third part of the flutings of a column are (or) filled up; hence called *cabled flutings*. There are also *cablings* in relief without flutings.—*Rees, Cyclopædia*, in voce.

Cáblish, *s.* See extract.

Cablish (caldium) signifies brushwood, according to the writers of the Forest Laws; but Spelman thinks it more probably windfall-wood, because it was written of old 'caldilum,' from 'calere,' or, if derived from the French 'chablis,' it must also be windfall-wood.—*Anglo-Lat. Dictionary*, in voce.

The sense of *windfall* is confirmed by the following passage:

Cable, a windfall, or tree overthrown by the wind or tempestuous weather.—*Colgrave.*

Cabób. See *Keob*.

Cabóche, *s.* Bullhead, or mallet's thumb; (probably applied to other big-headed fishes, or to the tulipole). *Obsolete*.

Vocabularies in Library of National Antiquities. (Wright.)

Cabóche, *v. a.* (whence *Caboched*.) In Heraldry. Beasts' heads borne without any part of the neck, and full-faced.

Caboched, caboched or *cabouché*, . . . is where the head of a beast is cut off behind the ears by a section parallel to the face; or by a perpendicular section, in contradistinction to couped, which is done by a horizontal line; besides that it is further from the ears than *cabousing*. The head, in this case, is placed full-faced, or affronted, so that no part of the neck can be visible. This bearing is by some called *trunked*.—*Rees, Cyclopædia*, in voce.

Cabóching, *verb. abs.* See *Caboche*.

Caboóse. See *Kabuse*.

Cábriolet, *s.* [Fr.] Open two-wheeled carriage with an occasional cover for the head.

In the days men drove 'glas' as they since have driven stanhopes, tilbories, denets, and *cabriolets*, my chestnut horse was a fast trotter, and in little more than three quarters of an hour, from Westminster Bridge, I reached my lord's retreat.

Theodore Hook, Gilbert's Tivoli, v. d. ii. ch. i.
Daily did Bijou de Millecrochades drive his peerless *cabriolet* to the spot in question. *Dorothy the gongorist, The young Duke*, l. c. ch. ix.

Cáburnus, *s.* [?] See extract.

Caburnus, in sea-language, denotes small lines made of spun yarn, wherewith to bind cables, seize tackle, and the like.—*Rees, Cyclopædia*, in voce.

Cáchalot, *s.* [?] Spermucet whale. (This is what the word means in ordinary language; the statements in the extracts, as to the varietal species of the animal, apply rather to the zoological value of the term *Physeter*, than to the import of the English word.)

Physeter, the *cachalot*, in Ichthyology, is a genus of animals of the class and order Mammalia Cete, of which the general character is, both in the lower jaw and none in the upper. . . . There are *Cachalot*, Lesser *Cachalot*; Macrocephalus, blunt-headed *Cachalot*; Micros, sharp-nosed *Cachalot*; Tursio, high-nosed *Cachalot*.—*Rees, Cyclopædia*, in voce.

Some of our readers may perhaps be surprised that under the general term *cachalot* we introduce their notice only one species of this variety of whale. This we do, not because we deny the existence of others, far from it, but only because those others have not accurately been described or established. Desmarest but a few years ago admitted three sub-genera and seven species; and Lacépède has three genera and eight species, including his *Cachalot*, *Physalus* and *Physeter*. *Naturalist's Library*, Whales, by R. Hutton.

Cachinnatory, *adj.* Laughing with cachinnation.

So pass the sultry dog-days, in the most electric manner; and the whole month of July. And still, in her sanctuary of justice, sounds odious but harmonious—Ariston at eloquence, surrounded with the hum of crowding Paris; and no registering accomplished, and no 'states' furnished. 'States!' said a lively parliamenter: 'Messieurs, the states that should be furnished us, in my opinion, are the States-General.' On which timely joke there follow *cachinnatory* buzzes of approval. *Carlyle, French Revolution*, pt. i. b. iii. ch. iv.

'Mr. Polham,' said this gentleman, who was dressed in a brown coat, white waistcoat, buff-coloured inexpressibles, with long strings, and gaiters of the same hue and substance as the breeches.—'Mr. Polham, pray be seated—excuse my rising; I'm like the bishop in the story, Mr. Polham, too old to rise; and Mr. Briggs granted out a short, quick, quondam "he—he—he," to which, of course, I replied to the best of my *cachinnatory* powers. *Sir E. L. Bulwer, Polham*, ch. xxvi.

Cacothés, *s.* [Lat. *cacothés*, from Gr. *κακός* = bad, *θής* = habit.] Bad custom or habit; (generally applied to scribblers; the well-known passage of Juvenal,

'Fœtus insaniabilis imitator
Scribendi *cacothés*, et agro in corde senescit,'
explains the allusion).

There is a certain distemper, which is mentioned neither by Galen nor Hippocrates, nor to be met with in the London Dispensary. Juvenal, in the motto of my paper, terms it a *cacothés*, which is a hard word for a disease, called in plain English, the itch of writing: This *cacothés* is as epidemic as the small pox.—*Addison, Spectator*, no. 382.

He hath a confused remembrance of words since he left the university; he hath lost half their meaning, and puts them together with no regard, except to their *cadence*. - *Swift*.

One would imagine that this check might have damped the North Briton; but it served only to acerbate his humour for disputation. He said if every nation had its own revenue or music, the Scots had theirs; and the Scotchman who had not yet acquired the *cadence* of the English, would naturally use his own in speaking their language; therefore, if he was better understood than the native, his recitative must be more intelligible than that of the English; of consequence, the dialect of the Scots had an advantage over that of their fellow-subjects; and this was another strong presumption that modern English had corrupted their language in the article of pronunciation. - *Smollett, Expedition of Humphry Clinker*.

5. In the following extract a more definite import, as the name of a kind of metrical prose, is suggested.

Measured prose seems to have been known in our language from the earliest period. Even in the simple narrative of our venerable Chronicle, we often find traces of a rhythmic structure, much too marked to be the result of accident. . . . *Cadence* seems to have been the term used to denote the kind of measured prose of which we are now speaking; and, if in any composition much attention was paid to the flow of the rhythm, it was said (at least in the fourteenth and fifteenth centuries) to be "prosed in faire *cadence*." In the House of Fame, Chaucer represents himself as thus addressed:

That . . . hast set thy wit . . .
To maken bookes, songes, and ditties,
In rhyme or else in *cadence*.

And Tyndal conjectures . . . that he had written in "a species of poetical composition, distinct from rhyming verses." The tale of Melchior has been considered as blank verse, but . . . it is certainly a specimen of *cadence*. This measured prose, or *cadence* seems to have been long considered as peculiarly suitable to sermons. . . . There are portions of Chaucer's *cadence*, which might [the italics are the author's] have given Milton the hint on which he fashioned his choral rhythms in Samson Agonistes. - *Dr. Guest, English Rhythms*, b. iii. ch. ix.

Cadenced. *adj.* Regulated by musical measure or proportion.

A certain measured, *cadenced* step, commonly called a dancing step, which keeps time with, and as it were beats the measure of, the music which accompanies and directs it, is the essential characteristic which distinguishes a dance from every other sort of motion. - *A. Smith, On the Initiative Arts*.

Cadency. *s.* Same as Cadence.

The *cadency* of one line must be a rule to that of the next; as the sound of the former must slide gently into that which follows. - *Dryden*.

Cadent. *adj.* [Lat. *cadens*, *cadent-is*.] Falling down. *Rare*.

Let it stamp wrinkles in her brow of youth;
With *cadent* tears fret channels in her cheeks;
Turn all her mother's pains, and benedictions,
To laughter and contempt.
Shakespeare, King Lear, i. 4.

As matters themselves are soon to him, he is only rather worse off than before; for commonly he has some intrusive upper-boy fastened upon him at such times; some *cadet* of a great family; some neglected lump of nobility or gentry; that he must drag after him to the play, to the Pantheon, to Mr. Bartley's Oratory, to the Pantheon, or into the country, to a friend's house, or his favourite watering-place. - *Lamb, Essays of Elia*, The old and the new School, *miscd.*

What he [Louis XIV.] really obtained in Italy was little more than a special provision for a *cadet* of his house. - *Macleay, History of England*, ch. xxiv.

Cadétship. *s.* Military appointment in the East India service.

Cadger. *s.* Colloquial, with Provincial variations of meaning; as huckster; hawk-er; buyer up of poultry, &c., from the small breeders for selling in the larger (London) market. *Cadger* is given in Bailey as the name of a round frame of wood on which the hawks were carried: a fact which connects the word with the sale of poultry above.

Cadmiun. *s.* See extract.

This metal was obtained in 1817 by Professor Stromeyer of Göttingen, in examining into the cause of the yellow colour of certain oxides of zinc, which had been erroneously supposed to contain arsenic: he called it *cadmium*, from *cadmus*, a term formerly applied both to cadmus and to the substance which antihumors from the furnace during the manufacture of iron. - *Cadmiun*, in its physical qualities, much resembles tin, but is rather harder and more tenacious. - *Brown, J. and of Chemistry*.

Cadnat. *s.* See extract.

Cadnat - a word mentioned only, as far as I know, in a book entitled "The Perfect course of Instruction for Officers of the Month," by L. Rose, 1802, where it is defined, a sort of state of being for princes, dukes, or peers, at a great dinner. . . . The term "cadnat" was given in French to the ship-board vessel belonging to the table-service, which is more commonly called a "net." - *Franz Nares's Glossary*, by Holcroft and Wright.

Cadow. *s.* [?] Jackdaw; chaugh; young crow: (its application varying with the district. It seems, however, to be limited to the crow kind. In the following extract it translates *puffos*).

Cæsarian, *adj.* See *Cæsarian*.

Cæsura, *s.* See *Cæsura*.

Cáfeine, *s.* Crystallizable principle of coffee. With *ff*, as in the English *coffee*.

It is remarkable that one and the same principle, and that belonging to the class of azoic basic bodies, should be found in two such dissimilar substances as tea and coffee, infusions of which are used as a beverage over the greater part of the known world, and yet that the peculiar characteristic properties of tea and coffee should not be referable to its presence; at least the action of theine and caffeine on the system is by no means obvious; it is neither narcotic nor in any way poisonous. —*Reade, Manual of Chemistry*.

With *f*, as in the French *caffé*.

Coffee has been analysed by a great many chemists with considerable diversity of results. The best analysis is, perhaps, that of Schröder. He found that the raw beans distilled with water in a retort communicated to it their flavour. On redistilling the beans, filtering, and evaporating the liquor to syrup, adding a little alcohol till no more water was precipitated, and then evaporating to dryness, he obtained 17.58 per cent of a yellowish-brown transparent extract, which constitutes the characteristic part of coffee, though it is not in that state the pure proximate principle called *cafféine*. —*Ure, Dictionary of Arts, Manufactures, and Mines*, voc. *Coffee*.

Cag, *s.* Same as *Keg*.

A *cag*. —*Arden, Two* (c) *of* *Records of Twenty Years (Hull)*, 1676–1683. (Orel MS.)

1. Enclosure formed with twigs or wire, in which birds are kept.

See whether a *cage* can please a bird? whether a dog grow old flower with tying? —*Sir P. Sidney*.

Though slaves, like birds that sing not in a *cage*, They lost their voices and lost their rage. —*Walker*.

Swift many years later confessed some part of what he felt when he found himself on his way to court. His spirit had been bowed down, and night seem to have been broken by calamities and humiliations. . . . A sharp word or a cold look of the master sufficed to make the servant miserable during several days. But this tameness was merely the tameness with which a tiger, caught, *cag'd*, and starved, submits to the keeper who brings him food. —*Macaulay, History of England*, ch. xix.

Cágebird, *s.* Bird kept, or capable of being kept, in a cage.

They will here learn what the German naturalist, Bechstein, the greatest of authorities upon the natural history and treatment of *cage-birds*, has written. —*Translation* (edited by G. H. Adams) of Vol. I.

Bechstein's Handbook of Chamber and Cage Birds, p. 106.

Cáged, *part. adj.* Confined in a cage; furnished with cages or cells.

Though you close anchor's contracted shroud
Made his immured carcass seem a crowd,
Yet the *cag'd* doves did not wider dwell.

—*Then thou in thy large roof, and spreading cell*.

—*Verse prefixed to Greville's Aethusa*: 1650.

And now she would the *cag'd* cloister fly:

Religious love put out religion's eye.

—*Shakspeare, Love's Complaint*.

Caín-coloured, *adj.* See *extract* and remarks.

Peter Simple, you say your name is!—Ay, for fault of a better. And Master Slender's your master!—Ay, forsooth. Does he not wear a great long beard, like a glove's paring-knife?—No, forsooth! he has but a little wee face, with a little yellow beard, a *caín-coloured* beard. —*Shakspeare, Merry Wives of Windsor*, l. 3.

Such is the reading in Theobald, Dyce, and Singer; being in Knight and Collier

caín-coloured. The former is the reading

of the folio; the spelling being with a

capital C and final e, i.e. *Caín-coloured*.

The second, that of the quarto, is *hane-co-*

loured, with a *h*. Theobald's remark that

Cain and Judas, in the tapestries and pictures

of old, were represented with yellow

beards, is partially approved by Stevens,

who quotes passages to show that the red

beard of Judas was often alluded to, and

also instances of *Abraham-coloured* as an

adjective with a similar application, these

latter being subject to the exception that

Abraham might simply mean *auburn*. Still

the term *caín-coloured*, interpreted as

sickly yellow, has the expression *straw-*

coloured in the Midsummer-Night's Dream

(also applied to a beard) in its favour. Mal-

lone, finding in the quarto—

'Quickly. He has, as it were, a *whay-coloured*

beard.'

—*Simple*. Indeed, my master's beard is *hau-*

loured.

—and holding that *whay* and *canes* are

much of a colour, considers that this latter

reading is probable. The desideratum,

however, in the case of *Cain* is the want

of any special evidence that *Cain*, in regard

to the colour of his beard, was in the same

category with Judas. Neither Theobald nor

Dyce supplies this, though both treat the

word as a proper name. Of those who

read *caín*, all agree in making the word

mean the vegetable cane. The entry, how-

ever, of *Caín*—weazel suggests another

interpretation.

Caín, *s.* Heap of stones piled over a grave,

as a memorial, in Celtic times.

A *caín* is a heap of stones thrown upon the

grave of one eminent for dignity of birth, or splen-

dour of achievements. —*Johanson, Journey to the*

Western Islands of Scotland.

Caín-gorm, *s.* See *extract*.

Caín-gorm is a name given by lapidaries to an ornamental stone found on the mountain of that name in Inverness-shire. It is a splendid quartz, of various shades and nearly transparent. —*Walcroft, Cyclopædia of Commerce*, in voce.

Caínson, *s.* [Fr.] See *extract*.

The practice of building in *caínsons* is a method sometimes adopted in laying the foundation of

bridges in very deep or rapid rivers. These are large

hollow vessels framed of strong timbers, and made

watertight, which being launched and floated to a

proper position in the river, where the ground has

been previously excavated and levelled, are there

sunk. The piers of the bridge are then built within

them, and carried up above, or nearly to the level of,

the water, when the sides of the *caínson* are de-

tached from the bottom and removed: the bottom,

composed of a strong grating of timber, remaining,

and serving for the foundation to the pier. —*Rees, Cyclopædia*, in voce.

Cáitiff, *s.* [O.Fr. *chetiff*, *chaitiff*; Lat. *cap-*

tivus—see, also, last extract.] Mean vil-

lain; despicable knave: (often implying a

mixture of wickedness and misery).

Vile *caitiff*: vassal of dread and despair,

Unworthy of the common breathed air;

X X

Why lived thou, dead dog, a longer day,
And dost not unto death thyself prepare? —*Spenser*.

'Tis not impossible,

But one, the wickedest *caitiff* on the ground,
May seem as shy, as grave, as just, as absolute,
As Angelo. —*Shakspeare, Measure for Measure*, v. 1.

The wretched *caitiff*, all alone,

As he believ'd, began to moan,

And tell his story to himself. —*Butler, Hudibras*.

I see him who was once the object of my contempt
And scorn, a despised beggar, an abject *caitiff*,
A baseless spectacle of mortality, now looking down
Self in Abraham's bosom. —*Atterbury, Sermon*,
p. 178.

On the other hand, many words which denoted originally a low class in society have, by a reverse process, acquired in modern times a moral significance; thus villain, rogue, rascal, scoundrel, *caitiff*, *chit* and *caitiff*, from *captivus*, have been transferred from baseness of social condition to baseness of conduct. —*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. viii.]

Cáitiff, *adj.* Base; servile.

Would raise one's mind above the starry sky,
And cause a *caitiff* courage to aspire.

—*Spenser, Shepherd's Calendar, October*.

Good cause he had to hasten thence away;
For on a day his wary dwarf had spy'd
Where, in a dungeon deep, huge numbers lay
Of *caitiff* wretched thralls, that wailed night and
day.

—*Id., Rieu's Queen*, l. 5, 15.

Start not, Dervise,

'Tinge not thy *caitiff* cheek with reddening honour.

—*Thomson*.

Cáitiffe, *s.* [as contrasted with *captivity*,
this is a good specimen of a word derived
indirectly from the Latin through the Nor-

man, compared with one derived directly
from the Latin.] Captivity. *Obsolete*.

He that leaped into *caitiffe*, shall go into
caitiffe. —*Wycliffe, Apocalypse*, xiv. 24.

Cajólo, *v. a.* [Fr. *cageole*—to talk like a cage-

bird.] Flatter; soothe; coax; wheedle.

Though he, 'tis no mean part of civil
State-prudence, to *cajole* the devil.

—*Butler, Hudibras*.

The one affronts him, while the other *cajoles* and
pities him; takes up his quarrel, smokes his head at it,
claps his hand upon his breast, and then protests
and protests. —*Sir R. L. Estlin*.

Those, whom great learning, parts, or wit renowns,
Cope with hopes of honours, sacred gowns,
Provinciaships, and pulcs, and triple crowns.

—*Shakspeare, Soliman upon the Desert*.

In the course of three centuries which preceded
Edward's reign, they had ample time and opportunity
to threaten or *cajole* a simple-minded race
into the belief that they had a right to impose
the Levitical obligations upon them. —*Kemble, The*

Saxons in England, b. ii. ch. x.

Barlow was most desirous to remain a few days
longer in London, and for that end omitted no art
which could conciliate the victorious party. . . . At
his table he publicly drank the health of the Prince
of Orange. But William was not to be so *cajoled*. —*Macaulay, History of England*, ch. x.

With *into*.

To this assertion full credit is due. But bribes
may be offered to civility as well as to cupidity; and
it is impossible to deny that Pagan was *cajoled* into
bearing a part in some unjustifiable transactions of
which others enjoyed the profits. —*Macaulay, History*

of England, ch. iv.

Cajólo, *v. a.* Talk in a wheedling or coax-

ing manner.

My tongue, that wanted to *cajole*,

I try'd, but not a word would trill. —*Rymer*.

Cajólery, *s.* Flattery; coaxing; wheedling.

Thus the christian spirit, by his *cajólery*, per-

suades many easy persons to set vain and wanton

liberties upon the exterior of their behaviours. —*W.*

Moulton, Devout Essays, pt. ii. p. 165: 1683.

Even if the lord-mayor and speaker mean to in-

sinuate that this influence is to be obtained and held

by flattery their people, &c., such *cajoleries* per-

haps would be more prudently practised than pro-

posed. —*Burke, Letter to R. Burke*.

Nevertheless despen your *cajólery*, harp quex

and quicker, ye royalist seigneurs, with a dead-life

effort you may bring it to that. —*Carlyle, French*

Revolution, pt. ii. b. v. ch. vi.

Cájuput, *s.* [Malay. —see extract.] Tree

so called (Melaleuca minor), whence *cájuput*

oil.

This tree was described by Rumphius under the
names of arbor alba minor, *cájuputi*, dann kitsjil,
and *cájup-kilan*. It has got its name from its colour
kájup-puti, which signifies white wood, and hence its
appellation, as given to it by Rumphius, arbor alba.
Cájuput oil is usually imported in green-glass bot-

tles; . . . its colour is green; . . . it is transparent,
liquid, of a strong penetrating smell. —*Forster, Elements of Materia Medica*.

As the word meaning *tree* is spelled with

337

k and *y* in Crawford's Malay Dictionary (where the words under notice are *kayu* = tree and *putih* = white), and as such is its sound; it would be well to adopt this spelling; that with *j* being Dutch. The term is, probably, recent enough to allow of this.

Cake. s. [Dutch, *koek*.]

1. Kind of delicate bread.

You must be seeing christenings! do you look for ale and cakes here, you rude rascals? —*Shakespeare, Henry VIII.* v. 3.

The dismal day was come, the priests prepared Their heavenly cakes, and fillets for my hair.

Dryden.

2. Anything of a form rather flat than high, by which a cake of bread is sometimes distinguished from a loaf.

There is a cake that groweth upon the side of a dead tree, that hath golden no taste, but it is large and of a chestnut colour, and hard and pithy. — *Bacon, Natural and Experimental History.*

3. Coagulated matter; coagulated matter.

Yet when I meet again those sorrower's eyes, Their bonus my hardest resolutions thaw, As if that cakes of fire and Julyan't.

Brumant and Fletcher, Mortal Maid.

Then when the fiery skies now cloath the world, And cakes of rustling ice come rolling down the flood.

Dryden.

4. Oilcake.

How much cake or guano this labour would purchase we cannot even guess at, and without being in possession of information on all these points we should not be justified in asserting that urine is not cheap manure. — *Anders, The Channel Islands*, p. 47.

My cake is dough — I have failed in baking; thence meaning failure, miscarriage, disappointment in general.

My cake is dough, but I'll be among the rest, Out of hope of all, but my share of the best.

Shakespeare, Twelfth of the Night, v. 1.

Steward! your cake is dough as well as mine.

B. Jonson, The Case is altered.

You shall have rare sport if my cake be a'd dough, and my jod do but take. — *Ozell, Translation of Robt. p. 105.*

Notwithstanding all these traverses, we are content here that the match will take; otherwise *my cake is dough*. — *Hurdl, Letters*, i. § 3, t. 12. (Notes by H. and W.)

Cake. v. n. Harden; become as a cake or crust.

This turning matter, as it sunk very leisurely, had time to cake together, and form the bottom, which covers the mouth of that dreadful vault that lies underneath it. — *Adrian, Travels in Italy.*

He rins'd the wound.

And wash'd away the strings and clotted blood, That cak'd within.

Sh.

Cakebread. s. Manchet.

As I and eat them all too, as they were in cakebread. — *B. Jonson, Bartholomew Fair*, v. 3. (Notes by H. and W.)

Caked. part. adj. Converted into a cake, crust, or concretion.

He knoweth also whether that our stone Be caked earth, or exhalation.

Spenser, Du Bartas, p. 350.

Caking. part. adj. Forming a crust or cake. Dr. Thompson arranges the different kind of British coal under the following divisions: (1) *caking coal*; (2) *splitting coal*; (3) *cherry coal*, which is less hard and more slaty in fracture, and cannot coal; such as that from Wigan in Lancashire. — *Beauch, Manual of Chemistry.*

Calabash. s. [Spanish, *calabaza* — gourd.]

Vessel made of a dried gourd.

One mighty monarch, the Lewis the Great of the isthmus, who wore with purple a cap of white reeds lined with red silk and adorned with an ostrich feather, seemed well inclined to the strangers, received them hospitably in a palace built of canes and covered with palmetto royal, and seated them with calabashes of a sort of ale brewed from Indian corn and potatoes. — *Munday, History of England*, ch. xxiv.

Calamanco. s. [See last extract.] Kind of woollen stuff.

He was of a bulk and stature larger than ordinary, had a red coat, flung open to show a *calamanco* waistcoat. — *Tidley.*

Calamander is a woollen stuff manufactured in Brabant and in Flanders. . . . It is commonly woven wholly of wool; there are some, however, wherein the warp is mixed with silk; and others with goats' hair. There are *calamancos* of all colours, and diversely wrought. Some are quite plain; others have

broad stripes adorned with flowers. . . . This has been also no inconsiderable branch of the woollen manufacture in England. — *Rees, Cyclopædia*, in voce. [In the Latin of the middle ages are found *calamatum*, *calamancus*, *calamancum*, *capitis integumentum et julei genus ex canaliculorum pilis confectum*; a covering of the head, or kind of cap formed of canal's hair; whence some consider the word to be derived. — *Richardson*, in voce.]

Calamander (wood). s. [See second extract.]

Wood of the *Diospyros hirsuta*.

Calamander wood is a beautiful shiny wood obtained from a tree which grows in Ceylon. It is extremely hard, and thick veined with different shades of black and brown. Being scarce and very dear, little is imported. — *Waterdon, Dictionary of Commerce*.

The *Calamander*, the most valuable cabinet wood of the island, resembling rosewood, but much . . . passing it both in beauty and durability, has, at all times, been in the greatest repute in Ceylon. It grows chiefly in the Southern provinces . . . but here it has been so gradually felled, first by the Dutch, and afterwards by the English, without any precautions for planting or production, that it has at last become excessively rare; . . . [it] runs some risk of becoming extinct in the island; but, as it is not peculiar to Ceylon, it may be restored by fresh importations from the south-eastern coast of India, of which it is equally a native; and I apprehend that the name *Calamander*, which was used by the Dutch, is but a corruption of *Coromandel*. — *Sir J. E. Tennant, Ceylon*, pt. i. ch. iii.

Calamary. s. [Romanic, *calamari* — inkstand.]

Cuttlefish.

ink-ling consists of tough white fibrous texture in the outer surface of which is coated by a thin silvery or mercurous layer; its inner surface presents a fine spongy glandular texture. It is usually of an oblong pyriform shape, . . . but it presents at certain seasons a trilobate form in the Sepioida, in which Peters has observed it to contract regularly. It is a very active organ, and its ink secretion can be reproduced with great activity. The tint of the secretion varies in different species, a exemplified in insipidated state, by the Italian pigment called Sepia, and the Chinese one, called Indian ink. It is also very durable, as is shewn by its frequent preservation in a fossil state in both the extinct *Calas* and the Belemnite. It is affirmed by some chemists to contain a peculiar animal principle, which Vizio has termed melanine. — *Owen, Lectures on Comparative Anatomy*, lect. xxiv.

Calambak. s. See Englewood.

Calamine. s. Ore of zinc. See extracts.

We must not omit those, which, though not of so much beauty, yet are of greater use, viz. limestone, whetstones of all kinds, limestones, *calamine*, or 'lapis calaminarius,' &c.

The principal ores of zinc are the sulphuret called blende, the silicate called *calamine*, and the sparry *calamine*, or the carbonate. . . . *Calamine*, or the silicate of zinc, is divided into two species, the prismatic or electric *calamine*, and the rhombohedral; though they both agree in metallurgical treatment. The first has a vitreous lustre, inclining to pearly; colour white, but occasionally blue, green, yellow, or brown. . . . The second species, or rhombohedral *calamine*, is a carbonate of zinc. . . . It occurs in kidney-shaped, botryoidal, stalactitic, and other imitative forms. — *Ure, Dictionary of Arts, Manufactures, and Mines*, Zinc.

Calamint. s. [Gr. *καλάνθη*.] Name applied to plants of the genus *Calamintha*.

The *calamint* which groweth on mountains is of a fervent taste, and biting, hot, and of thin substance, and dry after a sort of the third degree; as Galen saith, it dieth with or wasteth away thin humors, it cutteth and maketh thick humors thin. — *Gervase, Herbal*, p. 188; ed. 1633.

Calamistrate. v. a. [Lat. *calamistro* = twist the hair with curling-irons.] Curl or frizzle the hair.

Which helike makes our Venetian ladies, at this day, to counterfeit yellow hair so much; great women to *calamistrate* and curl it up, to adorn their heads with tangles, pearls, and made-flowers; and all courtiers to affect a pleasing grace in this kind. — *Barton, Anatomy of Melancholy*, p. 460.

Calamistratio. s. Act or process of curling the hair. *Obsolete*.

These curious needle-works, variety of colours, jewels, embroiderys, *calamistrations*, ornaments, &c., will make the veriest dowdy otherwise a goddess. — *Barton, Anatomy of Melancholy*, p. 476.

Calamitous. adj. Miserable; ill-omened; unfortunate; unhappy; wretched. Applied to men.

This is a gracious provision God Almighty hath made in favour of the treacherous and *calamitous*; the state of some in this life, being so extremely wretched and deplorable, if compared with others. — *Calamy*.

Applied to external circumstances.

What *calamitous* effects the air of this city wrought upon us the last year, you may read in my discourse of the plague. — *Marey, Discourses of Consumption*.

Strict necessity

Salvage me, and *calamitous* constraint! Lest on my head both sin and punishment, However insupportable, be all Devolv'd.

Milton, Paradise Lost, x. 131.

Much rather I shall chuse To live the poorest in my tribe, than richest, And be in that *calamitous* prison left.

In this sad and *calamitous* condition, deliverance from an oppressor would have even revived them. — *South*.

Calamity. s. [Fr. *calamité*; Lat. *calamitas*.] — see, also, extract from Bacon.] Misfortune; cause of misery; distress.

Another ill accident is drought, and the spinning of the corn, which with us is rare, but in hot countries common; inasmuch as the word *calamity* was first derived from *calamus* when the corn could not get out of the stalk. — *Bacon*.

This infinite *calamity* shall cause To human life, and household peace confound.

Milton, Paradise Lost, x. 967.

From adverse shores in safety let her leave Foreign *calamity* and distant war; Of which, great Heaven, let her no portion bear.

Prior.

Calamus. s. [Lat. = reed, cane, stalk.] Sweet flag (*Acorus Calamus*), a native plant belonging to the Aroidæ.

Take them also into three principal species of pure myrrh, of sweet cinnamon, and of sweet *calamus*. — *Evides*, xxx. 23.

Calash. s. [Fr. *calèche*.]

1. Four-wheeled carriage; originally, and perhaps generally, with a head.

Daniel, a sprightly swain, that used to slash The vigorous steeds that drew his lord's calash.

King.

The ancients used *calashes*, the figures of several of them being to be seen on ancient monuments. They are very simple, light, and drove by the traveller himself. — *Archeolog, Tables of Ancient Coins, Weights, and Measures*.

Mr. Vanstycken was up at daylight, and dressed in his uniform; he put on his pocket all the copies of the Japanese correspondence, and went on shore — hired a *calash*, for he did not know how to ride, and set off for the Hague, where he arrived about ten o'clock. — *Marey, North-gate*, vol. ii. ch. iv.

2. Covering to protect the head of a lady fully dressed: (generally made of silk supported with hoops of cane or whalebone, and projecting considerably over the face).

Thus, throughout the passage from the Ferry, she pettishly repulsed his caresses and kind words, and pleading, not without air of reason, that she had a headache and desired to be left in peace, hid her *calash* over her head, and sat as far away from him as the limited space permitted, like a pretty malicious child. — *Sala, The Shop-Chauffeur*.

Calathian (violet). s. Plant so called (Gentiana Pneumonanthe), native, though rare.

It is called *Vida autumnalis*, or autumnal violet, and seemeth to be the same that Valerius Cordus calleth *Pneumonanthe*, which he says is named in the German tongue *Lungen Blume*, or lung-flower; in English, Autumn Bellflower, *Calathian* Violets, and of some Harvest-bells. — *Gervase, Herbal*, p. 128; ed. 1633.

As the Gentian under notice has *Pneumonanthe* for its specific name, the term *Calathian* is attached to it in the ordinary Floras. It is doubtful, however, whether the application be real, i.e. whether it belong to the popular language of England. The exact plant meant by Pliny (N. H. xxi. 14) is uncertain. It was, probably, no true *Viola*. 'In totum vero sine odore, minutoque folio *Calathiana*, munus autumnum, cætera veris.'

Calcareous. adj. Partaking of the nature or qualities of lime.

On the east side is a stratum of bones of all sizes, belonging to various animals and fowls, enclosed in an incrustation of a reddish *calcareous* rock. — *Swinhorne, Travels in Spain*, let. 20.

Soils consist of different combinations of two or more of the four primitive earths: namely, the *calcareous*, which I sometimes call mild calc; magnesian; argill; and the silicious. — *Kirwan, On Manures*, i. § 1.

Calcevélla. s. See Carcavillos.

Calcedony. *s.* See Chalcedony.

The first foundation was a Jasper; the second, a sapphire; the third, a *calcedony*.—*Revelation*, xxi. 30.

Calceolaria. *s.* [Lat. *calceolus* = slipper.] Plant of the natural order Scrophulariaceæ: (so called from its likeness to a slipper).

Thus the botanist tells us of *Linus*, *Stapellus*, *Menyanthes*, *Polanthes*, and *Euphorbia*, as concentrated in Southern Africa; of *Magnolia* in Central America, of *Calceolaria* on the Andes; of *Myrica*, *Banksia*, *Mimosa*, and *Eucalypti* in Australia; and of the Bread-fruit trees in the South Sea Islands, &c.—*T. V. Wallaston, On the Variation of Species*, p. 112.

Calcification. *s.* Conversion into lime.

When the calcareous matter has been dissolved away from a very thin lamella of bone and the remaining substance is carefully examined, it is found to consist, not (as is commonly stated) of cartilage, but of a substance made up of indistinct fibres interwoven with each other. These fibres correspond in appearance and composition with those of the white fibrous tissue; and it seems probable that the solid mass of fully formed bone is formed by the calcification of this tissue.—*Carpenter, Principles of Physiology*, p. 203.

Calcified. *part. adj.* Constituted of, or characterized by, lime.

A tooth is a hard body attached to the mouth or commencement of the alimentary canal, partially exposed, when developed. *Calcified* teeth are peculiar to the vertebrates, and may be defined as bodies primarily, if not permanently, distinct from the skeleton, consisting of a cellular and tubular basis of animal matter containing earthy particles, a fluid, and a vascular pulp. —*Owen, Anatomy of Vertebrates*.

Calcify. *v. a.* [Lat. *calx*, *calcis* = lime, *flu* = become.] Convert into lime.

If we compare the dental system of *Lepidodiren* with that in *Batrachia*, it is to the larval state of the anurous that an analogy may be found: the talpoid of the frog having its maxilla and mandible each sheathed with a continuous horny translucent covering. Were this sheath actually dentified in tissue and moved to the jaw-bone, the resemblance to the *Lepidodiren* would be closer; but it is never *calcified*, and is shed during the progress of the metamorphosis. —*Owen, Anatomy of Vertebrates*.

Calcifiable. *adj.* Capable of being, or liable to be, calcified.

Not fermenting with acids, and imperfectly calcifiable in a great fire.—*Hill, On Fossils, Minerals*.

Calcinate. *v. a.* Same as Calcine. *Rare.*

In hardening, by baking without melting, the heat hath three degrees; first, it indurates, then maketh fragile, and, lastly, it *calcinate*. —*Bacon, Natural and Experimental History*.

Calcination. *s.* Process by which anything is calcined.

Divers residues of bodies are thrown away, as on as the distillation or *calcination* of the body that yielded them is ended. —*Boyle*.

This may be effected, but not without a *calcination*, or refining it by art into a subtle powder. —*Sir T. Browne, Vulgar Errors*.

Calcination is the chemical process of subjecting metallic bodies to heat with access of air, whereby they are converted into a pulverulent matter somewhat like lime in appearance, called *calx* in Latin. The term *calcination*, however, is now used when any substance whatever is exposed to a roasting heat.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Calcine. *v. a.* Reduce to a Calx; reduce to ashes; burn up.

It [a fever] doth not only melt him, but *calcine* him, reduce him to ashes and to atoms.—*Boone, Decisions*, p. 23.

Few disputes that union have *calcified*, Almost as many minds as men we find.

Sir J. Denham.
The solids seem to be earth, both together with some oil; for if a bone be *calcined*, so as the least force will crumble it, being immersed in oil, it will grow firm again. —*Arbuthnot, On the Nature and Choice of Aliments*.

Calcine. *v. n.* (both in the active and neuter forms of this verb, the accentuation of the previous editions is Calcine.) Become a calx.

This crystal is a pellucid flasse stone, clear as water, and without colour, enduring a red heat without losing its transparency, and, in a very strong heat, *calcining* without fusion.—*Sir I. Newton, Opticks*.

Calcined. *part. adj.* Reduced by calcination. He put up the ashew into several glasses, sealed hermetically, and written upon with the several names of the *calcined* herbs.—*Gregory Posthumus*, p. 70.

When it was urged that the reduction of a metal

from a *calcined* to a metallic form could not consist in the addition of phlogiston, because the metal was lighter than the calx had been; it was replied by some, that this was not conclusive for that phlogiston was a principle of levity, diminishing the weight of the body to which it was added. —*Wheatstall, History of Scientific Ideas*, ii. 34.

Calcitratio. *s.* [Lat. *calcitratio*, -onis, from *calcitra* = kick, from *calx* = heel.] Act of kicking. *Rare.*

The birth of the child is caused partly by its *calcitratio*, breaking the membranes in which it lath.—*Ross, Arcana Microscopia*, p. 32: 1632.

Calcium. *s.* [from *calx*, *calcis* = lime; the final -um belonging to the artificial language of Chemistry, and denoting the metallic character of the substance to which it applies.] Metal so called; metallic basis of lime.

Many obtained evidence of the existence of this metal [*calcium*], and of its analogy to the preceding metals. . . . The hydrate of peroxide of *calcium* precipitates on adding lime water, drop by drop, to a solution of peroxide of hydrogen.—*Graham, Elements of Chemistry*.

Calceography. *s.* [see Chalcography.] Art of engraving on brass.

The histories of refining; of making copperas; of making alum; of *calceography*; of enamelling. —*Bishop Sprat, History of the Royal Society*, p. 238.

Calculable. *adj.* Capable of being calculated.

The deposit of peat, or of rolled pebbles and stratified sand; the removal of other similar deposits already bedded. . . . the introduction and operation of various forces, visible and *calculable*; the mode in which rocks are undermined, weathered, broken up, and carried up in fragments by the sea. . . . these together form a class of phenomenon, which are, as it were, the very grammar of geology.—*Aschard, The Channel Islands*, p. 263.

Calculary. *adj.* Relating to the disease called Calculus, or the stone.

Motion was tedious and noxious to him, by reason of his *calculary* infirmity and capriciousness. —*Bishop Haden, Life of Bishop Becon*, i. 181: 1660.

Calculate. *v. a.* [see Calculus.] Compute; adapt; contrive.

A cunning man did *calculate* my birth, And told me that by water I should die.

Shakespeare, Henry VI. Part II. iv. 1.
Who were there then in the world, to observe the births of these first men, and *calculate* their natures, as they sprang out of ditches? —*Booth*.

The reasonableness of religion clearly appears, as it tends so directly to the happiness of men, and is, upon all accounts, *calculated* for our benefit. —*Archbishop Tillotson*.

This letter was admirably *calculated* to work on those to whom it was addressed. —*Mackenzie, History of England*, ch. xviii.

Calculate. *v. n.* Predict; speculate.

But if you would consider the true cause, Why all these fires, why all these shining ghosts, Why birds and beasts from quality and kind; Why old men, fools, and children *calculate*; Why all these things change from their ordinance,

Shakespeare, Julius Cæsar, i. 3.

Calculating. *part. adj.*

1. With the power or habit of calculating. The American *calculating* boy, Zerah Colburn, was asked how many black beans it would take to make ten white ones; to which he very properly answered, "Ten if thy skin thou'st; but the ten skinned beans would not be the same beans as before, except, indeed, to those to whom black is white." —*De Morgan, Formal Logic*, ch. iii. note.

Such are the facts which, by a certain adjustment of the *calculating* engine, would be presented to the observer.—*Babbage, Ninth Bridgewater Treatise*, ch. ii.

2. Farseeing; with an eye to the main chance: (with a *disparaging* rather than a complimentary import).

With his cool, *calculating* disposition, he easily got the better of his ardent rival.—*Godevin, St. Leon*.

Calculation. *s.*

1. Computation; practice or manner of reckoning; art of numbering.

2. Reckoning; result of arithmetical operation.

If then their *calculation* be true; for so they reckon.—*Hooker*.

Being different from *calculations* of the ancients, their observations confirm not ours.—*Sir T. Browne, Vulgar Errors*.

Calculative. *adj.* Belonging to calculation.

Persons bred in trade have in general a much better idea, by long habits of *calculative* dealings, of the propriety of expending in order to acquire. —*Bacon, On the Propriety of Laws*.

Calculöse. *adj.* (in previous editions the accent is erroneously placed on the first syllable.) [Lat. *calculosus* = abounding in calculi.] Stony; gritty.

The volatile salt of urine will congregate spirits of wine; and thus, perhaps, the stones, or *calculöse* concretions in the kidney or bladder, may be produced. —*Sir T. Browne, Vulgar Errors*.

Calculous. *adj.* In Medicine. Of the nature of a Calculus, or stone, in the urinary passages.

I have found, by opening the kidneys of a *calculous* person, that the stone is formed earlier than I have suggested.—*Sir W. B. Scurr, Surgery*.

Calculus. *s.* pl. *calculi*. [Lat. = pebble used in counting; and hence the basis of the whole class of words connected with number in general.]

1. In Mathematics. Generic name for the method of investigating indefinitely small variable quantities, and, as such, the equivalent to Fluxions; originally continental rather than English, but now generally not only adopted but extended in its application. See last extract; see, also, Differential and Integral.

When such processes as Newton thus deduced from the conception of a limit, are represented by means of general algebraical symbols instead of geometrical diagrams, we have then before us the method of fluxions, or the differential *calculus*; a mode of treating mathematical problems justly considered as the principal weapon by which the splendid triumphs of modern mathematics have been achieved. —*Wallis, History of Scientific Ideas*, i. 14.

On the continent, the advantages offered by a familiar use of symbols, and by attention to their symmetry and other relations, were accepted without reserve. In this manner the differential *calculus* of Leibnitz, which was its origin and significance identical with the method of fluxions of Newton, soon surpassed its rival in the extent and generality of its application to problems. This *calculus* was applied to the science of mechanics, to which it, along with the symmetrical use of co-ordinates, gave a new form; for it was soon seen that the most difficult problems might, in general, be reduced to finding integrals, which is the reciprocal process of that by which differentials are found; so that all difficulties of physical astronomy were reduced to difficulties of symbolical calculation, these indeed, being often sufficiently stubborn. —*Ibid.*, p. 163.

It is designed . . . to give expression . . . to the fundamental laws of reasoning in the symbolical language of a *calculus*. . . . These considerations furnish a sufficient answer to all protests against the exhibition of logic in the form of a *calculus*. —*Boole, Investigation of the Laws of Thought*, ch. I.

2. In Medicine. Here nearly retaining its original sense of pebble or small stone, and applied to certain concretions; more especially (a) Urinary, or concretions in the bladder, and (b) Biliary, or concretions in the gall-duets. Hence—Stone (in Bladder) and Gall-stone (q.v.).

Heberden agrees with him [Haller] in admitting that whilst urinary *calculi* are much more common in the male, biliary concretions are most frequent in the female sex. . . . *Calculi* in the gall-bladder seldom give rise to any marked or definite symptoms, unless they are very large. —*Copland, Dictionary of Practical Medicine, in voce Concretions, Biliary*.

Caldron. *s.* (sometimes, and that on good grounds, pronounced with *al* sounded as the *al* in *fulcon*, i. e. *fulcon*.) [*Fr. chaudron*.] Pot; boiler; kettle.

In the midst of all
There placed was a *caldron* wide and tall,
Upon a mighty furnace, burning hot.

Spenser, Faerie Queen.
Some strip the skin, some portion out the spoil;
The limbs, yet trembling, in the *caldrons* boil:
Some on the fire the reeking entrails boil.

Drayton, Virgil's Æneid.
In the late eruptions, this great hollow was like a
vast *caldron*, filled with glowing and melted matter,
which, as it boiled over in any part, ran down the
sides of the mountain. — *Addison*.

was circulated that knives, cut-throats, and *caldrons*,
intended for the burning of heretics, were conveyed

the king's protection at Clerkenwell. — *Macaulay*,

thy soul; cherish it with daily supplies from that
ocean which is never dry, but abounds, and will
increase thee, while thou seekest in humility to be
enriched to a devout and just *calefaction* of others.

— *Waterhouse, Apology for Learning*, p. 153; 1653.

Every *caléfaction* of the brain, whenever
it arises, is apt to make a man ecstatic.

heated.

to attract straws, or light bodies, and convert the

rors.

Calendar. *s.* [from *Lat. calendarium*, from
calendæ = kalends.]

1. Register containing the order of seasons,
months, festivals, and holidays, throughout
the year.

What hath this day deserved? what hath it done,
That it in golden letter should be set
Among the high tides, in the *calendar*?

Shakespeare, King John, lii. 1.

We compute from *calendars* differing from one
another: the compute of the one anticipating that
of the other. — *Sir T. Browne*.

Could he the day when first I did appear;
Let it be blotted from the *calendar*. — *Drayton, Fables*.

But the distinguishing brother, for whom we shall
hereafter find a name, now his hand was in, proved
by a very good argument that K was a modern ille-
gitimate letter, unknown to the learned as
anywhere to be found in our ancient
is true, and he, the word *calendar* (both *Calendarius*
Veterinarius) (Codicibus) been sometimes written
with a K, but erroneously; for in the best copies it
hath ever been spelt with a C. And, by consequent
it was a gross mistake in our launce to spell Knol
with a K; from henceforward he would take
it should be written with a C. — *Sir J. Tale of a*
Tub.

shall now proceed to shew, . . . have been *calendar*ed

Calendar, *v. a.* Act of entering in a
calendar.

The Council of the Irish Archaeological and Celtic
Society, by its action at this juncture, has added
another to its many requisited merits. These con-
sistent and scholars have presented to the
Treasury a memorial advocating the concentrating
and *calendar*ing of all the scattered Public Records
of Ireland, and dwelling with emphasis on the ne-
cessity of providing that the execution of such an
arrangement should be entrusted to scholars of tried
ability and known skill in this department of learn-
ing, so as to insure the fullest possible advantages to
the public. — *On the History, Position, and Treat-*

Calendar, or **Calender.** *s.* See Caloyer.

Thirty jades in the habit of pilgrim *calendar*ed. —
Sir Thomas Herbert, Relation of some Years
Travels into Africa and the Great Asia, p. 70.

Calender. *s.* [from *Fr. calandre*, from *Lat.*
cylindrus; *Gr. κύλινδρος* = cylinder.] Hot
press; press in which clothiers smooth
their cloth.

Calender is the name of a machine consisting of
two or more cylinders, revolving successively in contact
with each other, that cloth passed through between
them is smoothed and glazed by their powerful
pressure.

It is employed either to finish goods for
the market, or to prepare cotton and linen webs for
the calico-printer, by rendering their surfaces level,
compact and uniform. The condensation and pol-
ishing, or satining, as the French call it, differs in degree
according to the object in view. . . . The numerous
accidents which have happened to the hands of
workmen engaged in a calender's establishment
should direct the attention towards an effective
contrivance for preventing such misfortunes. — *Ency-*
clopædia of Arts, Manufactures, and Mines.

Used adjectively.

As a matter of as . . . notation the different pro-
cesses of packing, cording of boxes, shorting of
trunks, and, in general, all the arrangements pre-
servatory to shipments, and also the intimations and
surveys necessary for obtaining drawbacks, de-
bentures, or licences, according to the exigent laws,
are generally conducted at the *calender* houses,
which are situated near the docks. These establishments
efficiently account for the general meaning attached to
the word. — *Ency. Dictionary of Arts, Manufactures*
and Mines.

Calender. *s.* (*Calenderer* would be the more
correct form.) One who calenders.

I am a linen-dropper bold,
As nil the world does know,
And my good friend the *calender*
Will lend his horse to go. — *Campy, John Gilpin*.

Calender. *v. a.* Submit cotton or linen
cloth to the action of the calender.

When *calendar*ed the pieces are packed and
stamped. — *Ency. Dictionary of Arts, Manufactures*
and Mines.

Calendering. *verbal abs.* Process by which
anything is calendered.

For the first course of the printers, where high
calendering is necessary, the goods are usually passed
through between two paper cylinders, to give that
equality of surface which could not be obtained by
passage, however strong the pressure. — *Ency-*
clopædia of Arts, Manufactures, and Mines.

Calends. *s.* [*Lat. calendæ* = first day of the
Roman month.] Register; record. *Rhetor-*
ical, rare.

Such thoughts, and such deep-piercing darts,
As in the beauty of their eye
Harboured might, but flattery!
Their tears are drawn that drop deceit,
Their faces *calends* of all sleight.

— *Shakespeare, Twelfth Night*, act i. sc. 5.

And all their love is but a wile. — *R. Greene, Poems*.

Calenture. *s.* [Medical Latin, *calentura*,
from *calen* = be hot; as implying either
fever or a tropical climate.] Distemper
peculiar to sailors in hot climates, where-
in they imagine the sea to be green fields,
and will throw themselves into it.

And for that lethargy was there no cure.

That to be cast into a *calenture*. — *Sir J. Denham*.

So, by a *calenture* misled,

The summer with rapture sees.

On the smooth ocean's azure bed,
Enamelled fields, and verdant trees;

With eager haste, he longs to rove
In that fantastick scene, and thinks
It must be some enchanted grove;
And in he leaps, and down he sinks. — *Swift*.

Calf. *s.* [see extract.] Fleishy part of the
muscles in man between the knee and the
ankle.

Mr. Didapper, or Ben Didapper, was a young
gentleman of about four feet five inches in height.
He wore his own hair, tho' the scarcity of it might
have given him sufficient excuse for a periwig. His
face was thin and pale; the shape of his body and
legs none of the best; for he had very narrow
shoulders and no calf; and his gait might more pro-
perly be called hopping than walking. — *Fielding*
Adventures of Joseph Andrews.

[*Calf* of the leg. *Calf*, *calpa*, *calpa*, or *calpa na cois*,
the calf of the leg. The primary meaning of the
word seems simply a lump. *Calp* is *calid*, principal
and interest, the lump and the increase. It is another
form of the English *collap* or *gallap*, a lump or large
piece, especially of something soft. The calf of the
leg is the collap of flesh belonging to that member.
In like manner the English *collap* is related to Welsh
calp, a lump. The Latin analogue is *gallus*; *gallus*
cruris, the fleshy part of the leg; *gallus ligni*, butch-
er's half, the pith or soft part of wood. Icelandic
kalf, the calf of the leg. — *Waggoner, Dictionary of*
English Etymology.]

Calf (of the lips). [?] ?

Turn to the Lord, and say unto him, Take away
all iniquity, and receive us graciously: so will we
render the calves of our lips. — *Hosai, xiv. 2.*

Calf. *s.* [A.S. *cealf*.]

black cattle.

perimental History.

S. Lewis, &c. in No. 40.

2. Dull; stupid person.

These, when a child begins to be got
That after perceives an idiot,
When folk perceive it thriveth not,

skin leather.

the other, 'I find *calfskin* of sheep-skin that will do
his business.' — *Smollett, Expedition of Humphrey*
Clucker.

Calibre. *s.* [Fr. *calibre*, with accent and spelling retained.] Cast; turn; stamp.

Brethren, whose subjects are ye? Did ye swear your oath of fidelity, homage, and supremacy to the dispersed heads of Kimbolton, Hampden, Sir Henry Vane, and others of such *calibre*?—*Drammond, Scenarchæ, 160.* (Orl. MS.)

(Coming from men of their *calibre*, they were highly mischievous. *Darke.*

[*Calibre*: *Caliber*: *Caliper*. French, *calibre*; Italian, *calibro*, *calibra*, the bore of a cannon; English, *caliper*, *compass*, a compass contrived to measure the diameter of the bore. The earlier sense seems to be that of the Old English *califer*, an archbishop or saint canon, the name of which was probably transmitted from the French *calibre*, a machine for casting stones, whence also the name of the carbine is supposed to be derived. It was natural that the names of the old siege machines for casting stones should be transferred to the more efficient kinds of ordnance brought into use after the discovery of gunpowder. Thus the *musquet*, Italian *moschetto*, was originally a missile discharged from some kind of spring L.-cannon. . . . The name of the *calibre* as a projectile engine is probably a corruption of the simpler form *cable*, from *cabot*, a boat, as the Portuguese has both *cable* and *calibre* in the derivative sense of a cable. . . . The reason why the name *caliber* is used to designate a machine for casting stones is probably that the term was first applied to a lathe-ram, in German *lock*, a beam, a machine named by the most obvious analogy after the boat and the ram, whose mode of attack is to rush violently with their heads against their opponent. From the battering-ram, the earliest instrument of mural attack, the name might naturally be transferred to the more complicated machines by which large stones were thrown, and from them it seems to have descended to the harmless cranes or crabs of our more recent times, designated in the case of the German *lock*, as in that of the French *calibre*, by the name of the gun. Wedgwood, *Dictionary of English Etymology*.]

Calice. *s.* Same as Chalice.

There is a natural analogy between the ablution of the body and the purification of the soul; between eating the body bread and drinking the sacred *calice*, and a participation of the body and blood of Christ.—*Jeremy Taylor.*

Calico-printer. *s.* One who practises the art of calico-printing.

Suppose an ingenious gentleman should write a poem of advice to a *calico-printer*: if you think there is a girl in *King*—and that would wear anything but the takers of *Lace*, or the battle of *Oudenarde*?—*Taylor, no. 3.*

Could we like *Symonides*, without sitting down to chess with her eternal brother; or know *Sulpicia* without knowing all the round of her curd-pheezing relations? must my friend's brethren of necessity be mine also? must we be hand and glove with *Dick Selley the parson*, or *Jack Selley the calico-printer*, because *W. S.*, who is neither, but a ripe wit and a critic, has the misfortune to claim a common percentage with them?—*Lamb, Essays of Elia, Popular Gallies.*

Calico-printing. *s.* See extract.

Calico-printing is the art of impressing cotton cloth with topical dyes of more or less permanence. Of late years silk and woollen fabrics have been made the subjects of a similar style of dyeing. Linens were formerly stained with various-coloured

designs; but since the modern improvements in the manufacture of cotton cloths, they are seldom printed. . . . *Calico-printing* has been for several hundred years practised by the Oriental methods in Asia Minor and the Levant; but it was unknown as an English art till 1686, when a small print-ground was formed on the banks of the Thames, near Richmond, by a Frenchman. . . . The sagacious legislators of day . . . enacted in 1729 an absurd sumptuary law, prohibiting the wearing of all printed calico—whatever, either of foreign or domestic origin.—*Ware, Dictionary of Arts, Manufactures, and Mines.*

Calidity. *s.* [Fr. *calidité*.] Heat.

Callæsthetics. s. Proposed term for Esthetics.

Since, however, æsthetics would naturally denote the doctrine of perception in general; since this doctrine requires a name, since the term æsthetics has actually been applied to it by other German writers (as Kant); and since the essential point in the philosophy now spoken of, the theory of the Fine Arts, is that it attends to beauty; it appears desirable to change this name. In pursuance of the maxim now before us, I should propose the term *Callæsthetics*, or rather *Callæsthetics*, the science of the perception of beauty. *W. Hecell, Noema Organismæ reformata, p. 313.*

Callet. s. [see last extract.] Loose woman.

Calligraphic. adj. Relating to beautiful, or ornamental, writing.

At the end is an inscription, importing the writer's name, and his excellence in the *calligraphic* art.—*T. Warton, History of English Poetry.*

Calligraphy. s. [Gr. *καλλιγραφία* = beautiful writing, and, on better authority, *καλλιγραφία* = beautiful writer, in the way of handwriting. Other compounds of *καλλ* (i. e. the forms with *αλ*) are older still, e. g. in Homer, *καλλιγράφος* = abounding in beautiful women. With these facts we take the word as we find it in such writers as Ben-

Jonson, Lamb, and Warton; all scholars. Nevertheless, as compared with other compounds of a similar meaning, the composition is, at the first view, exceptional. Taking such a word as Orthography for a type, we infer that for 'beautiful writing' the first element ought to be the *adjective* *καλός* with a single *λ*, and the connecting vowel *ο*, giving *Kalography*.

Again, compounds of *γράφω* with a *substantive* give to the Verb the sense of *describing*, or rather *writing*, whilst the Noun conveys the name of the *thing* described; e. g. Geography = description of the earth. Calligraphy, however, is the current form, Calligraphy being, in every respect, wrong.] beautiful, ornamental, or ornamented, writing.

My calligraphy, a fair hand.

Fit for a secretary. *R. Johnson, Magnetic Lull.*

I have kept deluding myself with the idea that Mary would write to you, but she is so lazy (or I believe the true state of the case, so diffident), that it must revert to me as usual; though she writes a pretty good style, and has some notion of the force of words, she is not always so certain of the orthography of them; and that, and a poor hand-writing (in this age of female *calligraphy*), often deters her, where no other reason does. *Lamb, Letter to Wordsworth.*

Previous to the invention of printing, the art of *calligraphy* was of great importance. It was the custom and pride of the large religious establishments to have the books used in the celebration of Divine Service exquisitely written and adorned with miniatures. . . . The sister arts of *calligraphy* and miniature-painting flourished simultaneously in Italy and in the countries north of the Alps. *Mrs. Merivell, Original Treatises, &c., on the Art of Painting, introd. ch. ii.*

Calling. verbal abs.

1. Summoning; convocation.

Having to express testimony against Buckingham, they came to a vote that common fame is a good ground of proceeding either by inquiry or presenting the complaint to the king or lords; nor did a speech from the lord-keeper, severely rating their presumption, . . . nor one from the king himself, bidding them 'remember that parliament were altogether in his power for their *calling*, sitting, and dissolution' . . . tend to justify or to intimidate the assembly. *Hutton, History of England, vol. i. ch. vi.*

2. Vocation; profession; trade; proper station or employment.

If God has interwoven such a pleasure with our ordinary *callings*, how much superior must that be which arises from the survey of a pious life! Surely, as much as Christianity is nobler than a trade.—*South.*

At length he had turned pauper, had exceeded even the ordinary violence of his vile *calling*, and had received money from absolute young gentlemen commoners for services such as it is not good that history should record.—*Ibid. ch. viii.*

Callosity. *s.* [Lat. *callositas*, from *callosus*, from *callus* or *callum* = hardened skin.] Thickening and hardening of the skin, often giving it a horny appearance; from the impairing of the sense of touch thus caused, the notion of insensibility is suggested.

The surgeon ought to vary the diet of his patient, as he finds the fibres loosen too much, are too flaccid, and produce funguses, or as they harden and produce *callosities*; in the first case, wine and spirituous liquors are useful, in the last, *Althoff*, *On the Nature and Choice of Aliments*.

Applied, in *Surgery*, to the indolent thickening at the edge of a wound or ulcer; in *Zoology* to certain natural growths on different parts of different animals, e.g. the buttocks of certain apes, and the legs of horses and camels.

On looking to the more obvious marks for discriminating the minor groups of the particular family now before us, the Simiidae, we find that the apes have no cheek-pouches, severely any naked spaces or *callosities* on their buttocks, and (with but one exception) no tails; the fore feet or arms are also much busier than the hinder. The apes, monkeys, on the contrary, have all of them cheek-pouches, naked *callosities*, and long tails. . . . At the head of the quadrumanous order stands the genus *Simia*, in its most restricted and prevalent sense; that is, containing only those animals which, like the orang-outang, being destitute of cheek-pouches, *callosities*, or tail, evince a stronger analogy to the structure of man than do any other of the monkey tribe. . . . The gibbons, in general, have no naked *callosities*; but as nature is now progressing towards another form, we find a slight indication of this character in the Hylobates Lar, and one or two others; a circumstance which renders the transition to the anthropoid Presbytis more easy; this singular type, which agrees with all the former in its want of cheek-pouches, and its elevated forehead, has been placed next to the gibbons, although it is the only example in this group where the tail is developed. Like the gibbons, however, its arms are excessively long; and as some of these latter have small *callosities*, the only exclusive distinction of Presbytis is its tail. — *Saturnian, Natural History and Classification of Quadrupeds*, §§ 77, 78.

Callous. *adj.* Thickened and hardened.

In process of time, the ulcers became simons and *callous*, with induration of the glands. — *Wickman, Surgery.*

Applied to the passions.

Great and strange *calms* usually portend the most violent storms; and therefore, since storms and *calms* do always follow one another, certainly, of the two, it is much more eligible to have the storm first, and the *calm* afterwards: since a *calm* before a storm is commonly a piece of a man's own making; but a *calm* after a storm, a piece of God's. — *Norton.*

Calm. *v. a.* Still; quiet; pacify; appease.

The quicksilver combines with the deutochloride, and converts it into protochloride or *calomel*. — *Ure, Dictionary of Arts, Manufactures, and Mines.*

Caloric. *s.* [Fr. *calorique*; from *calor* = heat. As an English word, this is simply a term adopted, with a change of spelling and accent, from the French. As a French word, it is purely artificial and scientific; coined for the purpose of distinguishing *heat* as a physical force from *heat* as a sensation.] *Caloric* term for heat.

What are the principles by which we are to be guided to the true measure of heat? Here, as in all the sciences of this class, we have the general principle, that the secondary quality, heat, must be supposed to be perceived in some way by a material medium or fluid. If we take that which is, perhaps, the simplest form of this hypothesis, that the heat depends upon the quantity of this fluid, or *caloric*, which is present, we shall find that we are led to propositions which may serve as a foundation for a natural measure of heat. — *Whately, History of Science*, p. 350.

A dryness, we are told, will found a comrade by saying, 'you're a pretty fellow'; without having learnt that he is employing the heat called irony; . . . and that he will set his kettle on it the fire, to boil, though ignorant of the theory of *caloric*; and of all the belated vocabulary of chemistry. — *Whately, Elements of Rhetoric.*

Calorific. *adj.* [Lat. *calorificus*.] Having the quality of producing heat; heating.

Calorimeter. *s.* [Gr. *μέτρον* = measure.] Instrument for measuring the intensity of caloric.

It does not belong to our present purpose to speak of instruments of which the object is to measure, not sensible qualities, but some effect or modification of the cause by which such qualities are produced: such, for instance, are the *calorimeters*, employed by Lavoisier and Laplace, in order to compare the specific heat of different substances; and the actinometer, &c. — *Whately, History of Scientific Ideas*, i. 350.

Calotte. *s.* [Fr.] Cap or coif worn as an ecclesiastical ornament in France.

Caloyer. *s.* [Romanic, *caloyōre*, the *y* being sounded nearly as *y*. — *Calender* is a corruption of this word, and, as such, is the more truly vernacular term; indeed Caloyer can scarcely be called English. Hence the accent is left doubtful. In spelling the word with a *e* the ordinary practice is followed rather than approved.

* Indeed there is probably no word in the English language in which the *c* is more out of place than in Calver. In the modern, as in the ancient, Greek it has no existence; whilst the doctrine that the word came to us through the Italian is untenable. Monk of the Greek church: (the meaning of *derrière*, often attached to the other form Calender, being incorrect).

How name ye you lowe caltrop?
His features I have scanned before
In mine own land: 'tis many a year
Since, dashing on the lonely shore,
I saw him once as fleet a steed
As ever served a horseman's need.

The Grecians call it *σφαλαρος ἔρδος*; the Latins *Trifolium aquaticum*; . . . the apothecaries *Trifolium marianum*; in High Dutch *Wasser nusz*; the Bretoners *Water melen*, and of the like uses of iron nails, Mine-kisiers; the Frenchmen *Maerres*; in English it is named *Water Caltrop*, *Sliced*, and *Water-nuts*: must do call the fruit of this *Caltrop* *Castanea aquatica*, or *water-chestnuts*.—*Ibid.* p. 824.

In the sea between the coast of America and Kamtschatka, they are now most abundant; and there from May to October, the American whalers reap a rich harvest.—one, too, likely to last a little longer than elsewhere, since the Russians previously prohibit bay-winding, a practice destructive to the cow whales about the time of calving.—*E. Forbes, Literary Papers*, p. 152.

Calvish. *adj.* Like a calf.

ditation you thought, for your pains in advertizing the picture-mother, to have sucked her dug.—*Sheldon, Miracles of Antichrist*, p. 131.

Calz. *s.* [Latin.] Anything reduced to powder by burning, i.e. such mineral constituents, found in most substances, as resist the action of fire when everything else is burnt.

Gold, that is more dense than lead, resists perceptibly all the dividing power of fire, and will not be reduced into *calz*, or lime, by such operation as reduces lead into it.—*Sir K. Dight.*

Cályx. *s.* [Lat.] Botanical term, but, probably, adopted into the current language. Its literal meaning is *cup*, whence it denotes those modifications of the leaf which, when both are present, immediately enclose the corolla. Its English synonyms, nearly obsolete, are *Cup* and *Empalement*. See *Corolla*.

(For example see extract under *Corolla*.)

Calzoóns. *s.* [Spanish, *calzones*; Fr. *calçons*.] Drawers. *Doubtful English.*

The better sort of that sex here wear linen drawers, or calzoóns.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 115.

Cam. *adj.* [Welsh, *cam*, *s.* and *adj.* = crooked or bent, and bend or flexure.

The word *cam* has long been known to be of Welsh origin. Its derivatives, however, are common to both the English and the French languages.

'Contrepail, a contrepail. Against the wall, the wrong way, plane contrary, quite *contra*. *Camber*: crook, crooked, lanchy, bow, *cambr*-like, vaulted, arched, bent or built arch-wise.—*Camber*, *u. & c.* The same, *Southey*, *Cambr*, shoes which have hollow, raised, or Padian heels.—*Camber*: to bow, crook, bend, vault, arch, or as *cambrare*.—*Camber*, *f.* A bowing, crooking, or bending; a vaulting or building archwise, or as *cambrare*. ('*Cambrare*')

This may arise either from the origin of the term being Anglo-Norman, or from the root *cam* having belonged to the Celtic of Gaul as well as to that of Britain.

The spelling, as may be seen from the extract, is with *k*; and, were it not for the great extent to which the etymological principle is recognized in our orthography, it would be unobjectionable. Etymologically, however, it is a blunder. As one of the few genuine Celtic elements in English, it should be spelled as it is in Welsh, where there is no such letter as *k*; further reasons lying in the fact of the great majority of its congeners and derivatives beginning with *c*. See extract from *Cambridge*: to which may be added certain English words; e.g. among proper names, the first element in *Cambridge*. The stream, however, to which it originally applied was not the *Cam*, which is remarkable for its straightness, but the more winding *Grant*.

The initial-letter changes, which play so important a part in Welsh grammar, encourage the change of *c* into *g*, or *cam* into *gum*: giving such phrases as *ar y gum*—at a foot pace; *o gum i gum*—step by step; *i gum o gum*—with a tottering or uneven gait. Hence the slang term *gamey leg* has reasonably been interpreted *crooked leg*; its origin being British. David *Gam*, the valiant Welshman of the battle of Agincourt, was probably *Crooked Davy*.

The following extracts are from the notes of Steevens and Reed on the passage in *Coriolanus*. They give us a shadow of a justification for the spelling with *k*; inasmuch as if *kym* were written *cym*, it would run the risk of being sounded *sym*.

'Souldur incertum studi in contrariis vestes. The wavering common in *kym-kam* vestes are hailed.' (Stanhurst, *Trans. of Ewald*.)
'All goes topelo turvie; all kim, cam; all tricks

and devices; all riddles and unknown mysteries.' (Translation of Guzman de Alfarache.)
Crooked. Obsolete.

This is *clean kam*.—*Shakespeare, Coriolanus*, iii. 1.
Merely awry.

Camblet. s. [see extracts.] Bill-broker; one skilled in the science of exchange.

Exchange... is a subject of the first importance both in commerce and political economy. By its direct and common application... not only private fortunes are thus realised, but even public credit has been sustained by skillful *camblets*, or negotiators of bills. ... The word *camblet*, which is made the title of this work, may require some explanation, as it is of recent adoption in England, though long known on the Continent. *Camblet* in France, or *camblete* in Italy, Spain, and Portugal, signifies a language or exchange merchant. ... It may be further observed that *camblet* is not only a word of legitimate derivation, but is also a term much wanted in the English language, as there is none other to express the same meaning except *Exchange*, which seems too general and indefinite. — *Kelly, The Universal Cambist and Commercial Instructor, being a general Treatise on Exchange*, prof., 1811.

Cambio, an Italian word which signifies exchange... *Cambist*, a name given in France to those who trade on bills of exchange. The word *camblet*, though a term of antiquity, is even now a technical word of some use among merchant traders and bankers. — *Rees, Cyclopaedia*, in voce.

Camblum. s. [P.] In Botany. Mucilaginous matter between the bark and wood of trees.

Beneath the liber, and above the wood, is interposed in the spring a mucous viscid layer, which, when highly magnified, is found to contain mucous minute transparent granules, and to exhibit faint traces of a delicate cellular organization. This secretion is named *camblum*, and appears to be exuded both by the bark and wood. Dutrochet says only by the former, founding his opinion upon the presence of *camblum* in bark nodules, which he says have no communication with the wood of the parent tree. Although the name of *camblum* was originally given to the mucous secretion found in the spring between the bark and wood of exogens; yet it is, in truth, nothing more than the agglutinated or granular sap, which occurs in all the living parts of plants, and out of which new *camblum* are formed. It is, therefore, here introduced in connection with bark merely in compliance with custom. — *Lindley, Introduction to Botany*, b. i. ch. i. sect. 2.

Cámbrel. s. Mentioned by Warburton as a derivative of *cam*; but without any definite explanation; the fact of its meaning something crooked being an inference from the etymology rather than an ascertained fact. Among butchers and pigkillers, in some parts of the country at least, *cambril*, or *camerell*, means that piece of wood slightly bent or bowed, but not remarkable for its crookedness, by which slaughtered animals are hung up by their hind legs.

Cámbric. s. [from *Cambry*, in Flanders, where it was principally made.] Kind of fine linen used for ruffles, and for women's sleeves, caps, &c.

He hath ribbons of all the colours of the rainbow; inkles, caddises, *cambricks*, and lawns. — *Shakespeare, Winter's Tale*, iv. 3.

Rebecca had, by the use of a looking-glass, and by the further use of certain attire, made of *cambric*, upon her head, attain'd to an evil art. — *Taller*.

An excellent imitation of this fabric is made in Lancashire, woven from the fine cotton yarn hard-twisted. Linen *cambric* of a good quality is also now manufactured in the United Kingdom from power-spun flax. — *Ure, Dictionary of Arts, Manufactures, and Mines*.

Used adjectively.

Confederate in the cheat, they draw the throng, And *cambrick* handkerchiefs reward the song. *Guy*.

Cámel. s. [Lat. *camelus*.] Animal so called.

Considered scientifically, they [the *camels*] have several peculiarities. Instead, says M. Cuvier, of the great hump, flattened on the internal side, which envelops the whole lower part of each toe, and determines the figure of the ordinary cleft foot, they have but one small toe, which adheres only to the last phalanx; and this is of an asymmetrical form, like the hoofs of the Pachydermata. Their swelled and cleft lip, their long neck, prominent orbits, the weakness of their crupper, and the unsightly proportions of their legs and feet, give them, in some degree, an appearance of deformity; but, we may add, among the harmonious structures devised by nature, there is not one so beautifully adapted for the station and purposes for which it was created, than is the *camel*. As we shall, however, illustrate this subject in another place, we merely cite the words of Major Smith, as opposed to the insinuation of a French writer, that the peculiarities above al-

luded to make the *camel*, in some degree, deformed beings. These apparent disproportions are, however, in reality, only manifestations of that Great Will which has adapted everything, with wonderful precision, to its destined end: for, in the lands of nature, true disproportion is nowhere to be found. — *Newman, Natural History and Classification of Quadrupeds*, § 2m.

Camel-backed. adj. Having a back like a camel; hunchbacked.

Not that he was crook-shoulder'd, or camel-backed, — *Feller, History of the Holy War*, p. 215.

Camel-driver. s. One who drives camels.

So numerous were they in Upper Egypt, that in the time of Strabo half the population of the city of Coptos were Arabs; they were the *camel-drivers* and carriers for the Theban merchants in the trade across the desert. — *Sharpe, History of Egypt*, ch. xi.

Camélla. s. [named in honour of George Joseph Kamel (or *Camellus*), the botanist.] Flowering shrub so called.

Having a more equable temperature than almost any part of the western shores of Europe, but not a larger rain-fall, there is every facility of cultivating whole classes of plants, elsewhere difficult to keep alive; and, though there is little intense heat in summer, still the absence of cold in winter is sufficiently marked to admit of the orange-tree bearing fruit, while the *camélla* is loaded with flowers in sheltered gardens, from December to March. — *André, The Channel Islands*, p. 10.

Camélopárd. s. [Lat. *camelopardalis*; Gr. *καμηλοπαρδάλις*; the elements being *camelus* = camel, and *pardus* = panther, leopard, or tiger; the analysis into *camel* + *leopard*, with the corresponding pronunciation *camel leopard*, being noticed only to be condemned.] Translation of the generic name *Camelopardalis*; the animal to which it applies specifically being more commonly called the Giraffe.

Camelopardalis... a genus... established... for the reception of that curious animal the giraffe or *camelopard*. ... The description Gellius affords us of the giraffe is still more satisfactory. This writer saw three *camelopardalis* at Caesarea which he thus describes, &c. — *Rees, Cyclopaedia, Camelopardalis*.

The *camelopard* was seen by Denham and Clapperton in parties of five or six, on the shores of Lake Tchad, and also met with and described by Ruppell in his travels in North Africa; while those of the South are frequently mentioned in the travels of Le Vaillant and Hurchell. — *Naturalists' Library, Remarkable Animals*.

Cámeco. s. [Fr. *cameau*; Italian, *cammeo*.] — in the first extract both forms are found within a few lines.] Small and delicate carving in relief (as opposed to the *intaglio*, which is sunk) on stone or shell.

As a more immediate introduction to the present subject, we will call the attention of our readers to the two forms of engraving entitled *cameos* and *intaglios*. ... We refer our readers to Winkelmann's interesting account of the celebrated *cameos* which are handed down to us, particularly the exquisite one of Perseus and Andromeda. — *Foreign Quarterly Review*, no. 1.

The apparent conversion of a *cameo*, or bas-relief, such as that of a piece of money, into an *intaglio*, and of an *intaglio* into a *cameo*, when viewed with a single eye, especially through a microscope, is a well-known instance of this indetermination of judgement, and is an illustration of the aid we derive in estimating the form of solid objects from a different projection of them being presented to the two eyes. — *Dr. Haly, Treatise of Miller's Physiology*, p. 126.

Isabella of Este was distinguished by her elegant accomplishments and refined taste, which led her to collect antique statues, *cameos*, medallions, and other specimens of art. — *Rees, Life and Pontificate of Leo X.* i. 157. (3rd MS.)

With the accent on the second syllable.

Each new mould a softer feature drinks, The bold *cameo* spunks, the soft intaglio thinks.

Darwin, Botanic Garden.

Cáméra. s. [Lat. = chamber.] Chamber or compartment for exhibiting, by means of reflection, the image of anything external to its opening.

The *camera lucida* (=lucid, or clear chamber) is a contrivance of Dr. Hook for making the image of anything appear on a wall in a light room either by day or by night. — *Rees, Cyclopaedia*, in voce.

Dr. Wollaston's *camera* reduces external objects, by means of a prism, to a size which renders them capable of being traced.

In the *camera obscura* (=obscure or

darkened chamber) the light comes only through a double convex glass; and objects exposed to daylight, and opposite to the glass, are represented inverted upon my white surface placed in the focus of the glass.

The first invention of the *camera obscura* has been attributed to Baptista Porta. — *Rees, Cyclopaedia*, in voce.

He there saw the moral scenes of life passing in review before his mind, as exactly as the beautiful objects on his river Thames from his *camera obscura*. — *Tyce, Historical Rhapsody on Pope*, p. 16.

That the objects of sight are all painted in the bottom of the eye, upon a membrane called the retina, pretty much in the same manner as the like objects are painted in a *camera obscura*, is well known to whoever has the slightest tincture of the science of optics. — *A. Smith, On the External Sense*.

Cámérate. s. Same as Comrade.

Comrades with him, and confederates in his design. — *Ryder*.

Cámérate. adj. [Lat. *camera* = chamber.] In Zoology. Divided into chambers, as certain shells: (in the following extract we find both the Latin and the corresponding English term).

A more beautiful fossil shell than any of the preceding, but allied to them by the *camerated* and sigmoid structure of one of its constituent parts, once occasioned much perplexity amongst paleontologists. ... The shell to which I allude is that called the *Belonite*, which is associated with the more obvious conifers of the Nautilus through a considerable range of the secondary rocks. It makes its first appearance, with *Tudopsis* and *Clonema*, in the Lias, as the precursors of the *calymene* and *rudites*. The chambered part of the shell of this extinct *Cephalopod* has the form of a straight cone, the septa being numerous, with a slight and equable convexity directed towards the out or base of the cone. The intervening chambers are so shallow that the septa have been compared to a pile of watch-glasses. ... This chambered part, with its sherd, is lodged in a conical cavity. — *Ure, Lectures on Comparative Anatomy*, lect. xviii.

Cámis. s. [Italian, *camise*; Fr. *chemise*; Lat. *camisia*; Romani, *capimio*.] Kind of shirt or smock; tunic. *Scarcely English*.

Oh, who is more brave than the dark Sultane, With his snowy *camise* and his shaggy capote! — *Rygon, Child Harold*, ii. 75, song.

Camisado. s. [Spanish.] Attack made by soldiers in the dark, on which occasion they put their shirts outside, to distinguish each other by; also, the dress itself.

They had appointed the same night, whose darkness would have increased the fear, to have given a *camisado* upon the English. — *Sir J. Hopwood*.

Their armours and *camisados*: I mean the shirts that covered their armours. — *Sir R. Williams, Letters of the Love Contrasts*, p. 83; 1618.

After midnight, we dislodged from our quarter some two thousand of our best men, all in *camisados* with scaling ladders. — *Ibid.*, p. 82.

The towns and cloister, having intelligence, called out from both quarters some eight hundred footmen, with all their horsemen, to give a *camisado* under the conduct of Monsieur de Boveres. — *Ibid.*, p. 41.

Cámiet. s. [Fr. *camelot*; Italian, *camelotto*.] Kind of stuff originally made of a mixture of silk and camel's hair; now made with wool and silk.

He had on him a gown with wide sleeves, of a kind of water *camelot*, of an excellent azure colour. — *Bacon*.

This habit was not of camel's skin, nor any coarse texture of its hair, but rather some finer weave of *camelot*, program, or the like; in as much as these stuffs are supposed to be made of the hair of that animal. — *Sir F. Brouncker, Vulgar Errors*.

Meantime the pastor shears their hoary beards, And cases, of their hair, the laden herds: Their *camelots* warm in tents the soldier hold, And shield the shiv'ring mariner from cold.

Deighton, Lucid Chesterfield.

Cámhook. s. [A.S. *cammeo*.] Name said in botanical works to be applied to the *Ononis arvensis* or Rest-harrow; a plant by no means remarkable for its crookedness; its name being taken from the toughness and depth of its roots by which the harrow is ur-rested.

Cammoek, like Cambrel, has been derived from Cam; and in the extracts from Lyly *crookedness* is a conspicuous element in the import of the word. The last extract, however, shows that neither the origin nor the meaning is beyond doubt.

But timely, muckum, cracks that tree that will be a camock, and young it cracks that will be a thorn.

- Lyly, *Eudymus*.

Camocks must be bowed with sleight, not strength.

- Id., *Scipho and Phona*.

Katman on Bartholomew spells it *cambock* and *cambock*, but from his description seems to mean the furze. . . . In Apuleius *camocoe* is translated Peneceum, from which we may conclude that it did not originally mean a woody and thorny shrub; but rather, like *kambuck* in Suffolk at the present day, and *lex*, or some such plant as the Shepherd's Coad, which it seems to do in a passage of Piers Plowman's Vision:

For communklike in cuntries,

Camocke and weles,

Forde the fruit in the feld;

Then they growen togidres.

Dr. Prior, *Popular Names of British Plants*.

Camoused. adj. Crooked. *Rare*.

And though my nose be *camou'd*, my lips thick,

And my chin bristled, Pan, great Pan, was such.

- R. Jonson, *Sad Shepherd*.

Her nose some dele hoked,

And *camously* crooked. - Skelton, *Poems*, p. 124.

Camp. s. [Lat. *campus* = field, plain.] Area

on which a number of persons fix up movable habitations of any kind, for a longer or shorter occupation; collection of tents used by armies when they keep the field; army.

The hum of either army stilly sounds.

- Shakespeare, *Henry V.* iv. chorus.

Campagnol. s. [Fr.] Term applied to the

rodents of the genus *Arvicola*, as separated from those of the genus *Mus*. See *Vole*.

The generic name *vole*, applied to the *Arvicole*, by Dr. Fleming, seems to be preferable to *campagnol*, because, although it has no meaning, it gives no erroneous idea of these animals; whereas the latter, besides being descriptively inaccurate, is merely a French word, awkwardly introduced, with a pronunciation quite un-English. . . . This species (*Arvicola pratensis*) . . . was first discovered in England by Mr. Yarrell . . . and described by him . . . under the name of the *Bank Campagnol*. - *Naturalist's Library*; W. Macgillivray, *British Quadrupeds*.

Add to these the suttlers and *campfollowers*, and the amount of this vast army becomes incredible. - Goldsmith, *History of Greece*.

Cámpfor, or Cámpfire. s. Vegetable secretion so called.

This immediate product of vegetation was known to the Arabs under the name *camphi* or *kaphi*, whence the Greek and Latin *camphora*. It is found in a great many plants, and is secreted in purity by several kinds; . . . but it is extracted for manufacturing purposes only from the Laurus *Camphora*, which abounds in China and Japan, as well as from a tree which grows in Sumatra and Borneo. . . . The *camphor* exists in these trees between the wood and the bark. - E. Forbes, *Dictionary of Arts, Manufactures, and Mines*.

Cámpforate. adj. Same as Camphorated.

By shaking the saline and *camphorate* liquors together, we easily *c* founded them into one high-coloured liquor. - Boyle.

Can. v. n. [This word must be considered under several heads. 1. Its form and place as a tense. - Can is no Present tense in respect to its form, however much it may be one in respect to its import; but, on the contrary, a Perfect; and still less is it an Infinitive Mood, though in the previous editions it is preceded in its entry by the word *to*, i.e. *to Can*. This, indeed, is a form which it never takes in ordinary English, though catenachrestic forms like *to can* - to be able - *posse* are probably to be found. It is a Perfect of the same class as *swam* and *swum*; its Anglo-Saxon singular being what it is in English for the First and Third persons, its Second singular *cunne*, and all its persons in the plural *cunnon*; as *ic can*, *þu cunne*, *he can*, *we, ye, hi, cunnon*: exactly the conjugation of *swam*, *sung*, and numerous other verbs. The Present from which such a series would be formed is *can* or *cun*; or, as it would be spelt in all the allied languages, *ken* or *kin*.

2. Its meaning. - When we *have* known, *have* learned, *have* understood, how to do a thing, we *can* do it; and the sense is Present: our present ability being the result of our previously acquired knowledge and treated as such. "The same is the case with *memini* = I have called to mind - I remember, in Latin; with *scio* = I have known or seen (compare the Latin *vidi*), in Greek; and with *shall* (q.v.), in English. "This use of it in the sense of *know* is frequent in old English; and at the present time the provincial expression, 'I will do all I *know*' = 'I will do all I *can*,' is common.

3. Its age. - Like several other verbs in English which are in this or in similar respects abnormal (see *Dare*, *May*, *Owe*), it is one of the oldest words in the language, being fundamentally the same as the root of the Greek *γινώσκω*, and the Latin *gn-osc-o* (*nosco*).

4. The fact of its power being Present, whilst its form is Perfect, is odd. In the Anglo-Saxon it was so far treated as a Present, as to have a Preterite derived from it. This was *cude*. The German and Danish Preterites are *Rinnete*.

5. That the *i* in the ordinary Preterite *could* is entirely out of place is evident; indeed its presence in our spelling supplies us with one of the best instances of what is called Catachresis; concerning which more is said in the Preface. The only excuse, a preeminently insufficient one, is that (except in a few instances where the speaker, being misled by a little learning, fancies that in sounding it he is following the so called orthography of the written language) it does not belong to spoken, or real, language at all; but is merely a piece of bad spelling. The Scotch omit it (writing *cond*), and so did our oldest writers. The origin, however, is clear. The false analogies of *would* and *should*, from *will* and *shall*, where the *i* has really its place in the root, have misled us.

6. *Relation to Ken*.—As the *i* in *could* suggests a relationship to *should* and *would* which has no existence, so does the initial *c* conceal a relationship which is real. That the real Infinitive and Present of *can* are to be found in the North-Country word *ken* has, probably, been anticipated; yet, in practice, they are two different words, almost as different as *can* and *know*. The oldest spelling, however, of even *ken*, is that with the *e*; inasmuch as, unlike the allied languages, the Anglo-Saxon following the Latin in eschewing the use of the *k*; but, when an *e*, an *i*, or a *y* followed a *c*, the risk of that letter being pronounced as *s* made a resort to *k* convenient. Still, *can* and *ken* are the only words in English of which the character is thus disguised. Upon the whole, *could* may safely be branded as the worst spelt word in our language.

7. The construction of *Can* is generally Infinitive, rather than Gerundial; i.e. the verb which follows it is not preceded by *to*. We say 'I *can* speak,' but not 'I *can* to speak.'

1. Know; understand. *Obsolete*.

Scorneth thy flooke thy counsell can.

And can you these tongues perfectly?—*Beaumont and Fletcher, The Cornucopia*.

2. Be powerful; influential: (in the first extract the construction is gerundial). *Obsolete*.

The *canker*, scab, scurf, sap, and rot. *Erigen*.

In the following, the interpretation of the previous editions, 'kind of wild worthless rose, dugrose,' is apparently true of the quotations by which it is followed. In Gerard, however, the *canker-rose* is the red poppy; whilst *cankerwort* is given as a synonym of two words, Dandelion and Fumellin; the latter itself a term of doubtful meaning.

To put down Richard, that sweet lovely rose,
And plant this thorn, this *canker*-rose, Bohembrooke.

which it burns, is a species of coal found in most of
the English collieries, especially at Wigan in Lan-

Cannel is the corruption of the word *candle*,

Cánon. s. [Though often spelt with *nn*, the origin of this word is probably the Spanish *cañon* = tube or pipe. Hence, it may denote that which fits and encases anything, as a *boot*. The bones of the foreleg of the horse become firmer as we trace them downwards. The two bones corresponding with those of the forearm, are leaved together and consolidated; and the motion at the elbow joint is limited to flexion and extension. The carpus, forming what by a sort of licence is called the knee, is also newly modelled; but the metacarpal bones and phalanges are totally changed, and can hardly be recognized. When we look in front, instead of the four metacarpal bones, we see our strong horse, the *canon-bone*, and, posterior to this, we find two lesser bones, called splint bones.—*Sir C. Bell, Bridgewater Treatise, The Hand*.

[*Canter*: A slow gallop, formerly called a *Canterbury gallop*. If the word had been from *cantharicus*, a galling, it would have been found in the continental languages, which is not the case.—*Wedgwood, Dictionary of English Etymology*.]

The *canter* is to the gallop very much what the walk is to the trot, though probably a more artificial pace. The exertion is much less, the spring less distant, and the feet come to the ground in more regular succession: it is a pace of ease, quite inconsistent with any exertion of draught.—*Tonall, The Horse, On Draught*, p. 517.

Canterbury-bells. s. Name applied in the first extract to the Campanula Trachelium or Throatwort, in the second to the Cardamine pratensis or Lady's Smock; to the latter locally and without any manifest propriety. The garden-plant of the present time so named is a Campanula, allied to, but not specifically identical with, the Throatwort.

Throatwort is called in Latin *Corvicularia*, and *Cantharidæ* major, in Dutch, *Haksercut*; in English, *Canterbury bells*, *Hackewort*, *Throatwort*, or *Holewort*, of the virtue it hath against the pain of swelling thereof.—*Gerard, Herball*, p. 155: ed. 1633.

They are commonly called in Latin, *Flos Canuli*; in English *Curlew flowers*; in Norfolk *Canterbury bells*; at the Nampthick in Cheshire, where I had my beginning, *Ladies Smocks*, which hath given me cause to christen it after my country fashion.—*Ibid.* p. 261.

Cantering. verbal abs. In Horsemanship. Practice of the canter.

For the rest, he loved trotting better than *cantering*—piped himself upon being waded—wore doosh gloves—drank port wine, par preference, and considered beef-steak and oyster-sauce as the most delicate dish in the bill of fare.—*Sir E. L. Bulwer, Poems*, ch. xlii.

Cantharides. s. [plural of Gr. *κάνθαρις*, *cân*, diminutive of *αὐτοπαγος* = beetle or chafer.] Spanish flies (*Meloe vesicatoria*) used to raise blisters.

The flies, *cantharides*, are bred of a worm, or caterpillar, laid peculiar to certain fruit trees; as upon the fig tree, the pine tree, and the wild hawthorn; all which bear sweet fruit, and fruit that hath a kind of sweet biting or sharpness; for the fig hath a milk in it that is sweet and corrosive; the purple hath a kernel that is strong and abstersive.—*Bacon, Natural and Experimental History*.

Canthus. s. [Lat.] Angle of the eye.
A gentleman was seized with an inflammation and tumour in the great *canthus*, or angle of her eye.—*Wise man, Surgery*.

1. Song: (used generally for a song in Scripture).

This right of estate, in some nations, is yet more significantly expressed by Moses in his *cantic*, in the person of God to the Jews.—*Bacon, Advertisement touching a Holy War*.

The eighth chapter of Proverbs ceased to bear a Christian meaning, because as Theodoret maintained, the writer of the book had received the gift, not of prophecy, but of wisdom. The *Cantic* must be interpreted literally; and then it was but an easy, or rather a necessary step, to exclude the book from the canon.—*Neuenman, Development of Christian Doctrine*, ch. v.

2. Division of a poem; canto. *Rare*.
The end whereof, and dangerous event,
Shall for another *cantic* be sung.—*Spenser, Faerie Queen*, iv. 6, 40.

Cánting. part. adj. After the manner of one who cant.

That smooth affected garb of speech, or *cánting* language rather, if I may so call it, which they have of late taken up, is the signal distinction and characteristic note of that, which, in that their new language, they call the godly party.—*Bishop Sanderson*.

The busy, subtle serpents of the law,
Did first my mind from true obedience draw;
While I did limits to the king prescribe,
And took for oracles that *cánting* tribe.

Lord Roscommon.
I skill'd in schemes by planets to foreshow,
Take *cánting* vessels, how the wars will go.

Dryden, Juvénal's Satires.

Cánting. verbal abs. Act or habit of one who cant.

It has been held by some, that the art of *cánting* is ever in greatest perfection, when unminged by ignorance; which is thought to be emigmatized by Plutarch, when he tells us, that the best moral instructions were made from the bones of an ass. The art of *cánting* consists in skillfully adapting to whatever words the spirit delivers, that which may strike the ears of the audience with its most significant evidence.—*Swift, On the mechanical Operation of the Spirit*, (3rd MS.)

Cántingly. adv. In a *cánting* manner.

I dread nothing more than the false zeal of my friends, in a suffering hour, as he [Whitfield] *cántingly* expresses it.—*Treat of Mr. Whitfield's Spirit*, p. 10: 1740.

See how this river comes me cranking in,
And cuts me from the best of all my land,
A huge battlement, a monstrous *cantle* out.

Shakspeare, Henry IV, Part I, iii. 1.
Do you remember

The *cantle* of immortal cheese ye carried with ye?
—*Ben Jonson on Fletcher, Queen of Corinth*.
His robe of state is a scarlet mantle,
With eleven kings' heads border'd about,
And there is room left yet in a *cantle* about,
For time to stand, to make the twelfth out.

Endrick, Cambria triumphans, p. 167.

Dryden, Juvénal's Satires.

Nor shield, nor armour can their force oppose;
Huge *cantlets* of his buckler strew the ground,
And no defence in his hard arms is found.

Dryden.

Cánto. s. [Italian.] Book, or section, of a poem.

But now I will begin my poem. 'Tis
Perhaps a little strange, if not quite new,
That from the first of *cánto* up to this
I've not begun what we have to go through.

I thought, at setting-off, about two dozen
Cántos would do; but at Apollo's pleading,
If that my Pegasus should not be foiled,
I think to *cánto* gently through the hundred.

Byron, Don Juan, xii. 54, 55.

3. Small community, or clan: (especially applied to those of Switzerland).

The same is the case of rivers by land; such, as yet, are some *cantons* in Arabia, and some petty kings of the mountains, adjacent to straits and ways.—*Bacon, Advertisement touching a Holy War*.

Cánton. v. a. Divide into small parts.
They would have *cántoned* the kingdom, and

erected their several provinces into so many principalities. *Bishop Morley, Circumlocutionary, p. 28, 1661.*

Families shall quit all subjecthood to him, and cantonize his empire into less governments for themselves. — *Locke.*

It would certainly be for the good of mankind, to have all the mighty empires and monarchies of the world cantoned out into petty states and principalities. — *Addison, Thoughts in Italy.*

The late king of Spain, reckoning it an indignity to have his territories cantoned out into petty states by other princes, during his own life, and without his consent, rather chose to bequeath the monarchy entire to a younger son of France. — *Swift.*

And for what was he to make this terrible and costly sacrifice? For his ambition? Not even for that divinity of honour for which we all immolate so much! Mighty ambition, forsooth, to succeed to the Rights! To enter the House of Commons a slave and a tool; to move according to instructions, and to labour for the low designs of petty spirits, without even the consolation of being a dupe. — *Disraeli the younger, Contending, b. viii, ch. iii.*

Had the place only been in Yorkshire, she was sure he must have succeeded. She was the best the world, and everybody agreed that Harry Greylock could win election merely to her insinuating tongue and unvarnished powers of scolding. — *Disraeli the younger, The young Duke, b. iii, ch. iii.*

Such a master of the whole art of electioneering [as Wharton] England had never seen. Buckinghamshire was his own especial province; and there he ruled without a rival. But he extended his care over the Whig interest in Yorkshire, Cumberland, Westmoreland, Wiltshire. Sometimes twenty, sometimes thirty, members of Parliament were named by him. As a canvasser he was irresistible. He never forgot a face that he had once seen. Nay, in the towns in which he wished to establish an interest, he remembered, not only the voters, but their families. — *Macaulay, History of England, ch. xx.*

Caoutchouc, gum elastic, or Indian rubber occurs as a milky juice in several plants. . . The tree has incisions made into it through the bark in many

places, and it discharges the milky juice, which it spread upon clay mounds, and is dried in the sun, or with the smoke of a fire which blackens it. — *Ure, Dictionary of Arts, Manufactures, and Mines.*

I remember to have seen Dr. Wadston, a few days after he had become a flyfisher, carrying at his button-hole a piece of *caoutchouc* or Indian rubber, when, by passing his silk-worm link through a fissure in the middle, he rendered it straight and fit for immediate use. — *Sir H. Generally used of *verses*; in *capping* which one of the antagonists has to quote a verse corresponding to one quoted by his adversary. The principle which regulates this varies. Sometimes the respondent caps his opponent's verse by citing another or others which rhyme with them. With Latin or Greek it is more usual to quote a verse beginning with the same letter with which the last word of the adversary's either ends or begins.

Now move him under kirtle, I'll *cap* verses with him to the end of the chapter. — *Dryden, Amphitruon.*

sundry and manifold manners, nothing was yet de-
termined, but this vast *capability* of things was in-
settled, fluid, and of itself undetermined as water.
But the Spirit of God, who was the vehicle of the
Eternal Wisdom,—having lowered awhile over all
the *capabilities* of this fluid possibility,—forthwith
settled upon what was most perfect and exact.—
Dr. H. More, Conjectura Cabalistica, p. 23.

Often used *disparagingly* or *ironically*, in
the mention of a place which from its *capa-*
bility of being improved tempts the archi-
tect.

Sir Carte came as quick as thunder after light-
ning. He was immensely struck with Houdville,
particularly with its *capabilities*. It was a superb
place, certainly, and might be rendered unrivalled.
The situation seemed made for the pure Gothic.
The left wing should decidedly be pulled down, and
its site occupied by a knight's hall; the old *terrace*
should be restored; the donjon keep should be raised,
and a gallery, three hundred feet long, thrown
through the body of the castle. Estimates, esti-
mates, estimates! But the time? This was a greater
point than the expense. Wonders should be done.—
Disraeli the painter, The young Duke, b. i. ch. vi.

—*South.*

An heretic poem requires the accomplishment of
some extraordinary undertaking, which requires
the duty of a soldier, and the *capacity* and prudence
of a general.—*Dryden, Dedication to Translation of
Jerusalem's Saviour.*

Here the resemblance ends. Russell, with con-
siderable abilities, was proud, acrimonious, restless,

knowledge, and to be sunk in voluptuousness and
indolence.—*Manning, History of England, ch. ix.*

In digging, if a diamond exceed twenty *caracts*, (a carat is four grains,) such by the law of that place are reserved for the king.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 88.

A mark, being an ounce troy, is divided into twenty-four equal parts, called *caracels*, and each *carcel* into four grains; by this weight is distinguished the different thickness of their gold; for, if to the finest of gold be put two *caracels* of alloy, both minking, when cold, but an ounce, or twenty-four *caracels*, then this gold is said to be twenty-two *caracels* fine.—*Cocker*.

They are now that set the *caract* and value upon things, as they love them; but science is not every man's mistress.—*B. Jonson, Diabolics*.

Carafó. s. [Fr.; corrupted into *croft* and *watercroft*.] Glass bottle for water.

Carat. s. [See extract; in which the statement as to the exact details of the origin of the word in the Shaugalla language must be taken with caution; Shaugalla being a word meaning black or negro, and consequently applying to more than one African language on the frontier of Abyssinia. That *kuara*, however, is the root of the word under notice, as well as of Carob, is probable.

The spelling with *c* (see Caract) was probably encouraged, if not originally produced, by some confusion of the notion of *quality* as expressed by the weight of a diamond, and as expressed by the Greek *χαρακτ*, or character.] See extract.

The weight and value of diamonds is reckoned by *carats* of four grains each; and the comparative value of two diamonds of equal quality, but different weights, is as the squares of those weights respectively.... The term *carat* is said to be derived from the name of a bean, the produce of a species of *Erythrina*, a native of the district of the Shaugalla, in Africa, a famous mart for gold dust. The tree is called *kuara*, a word signifying 'sun' in the language of the country; because it bears flowers and fruit of a flame colour. As the dry seeds of the fruit are nearly always of uniform weight, the savages have used them from time immemorial to weigh gold. The beans were transported into India at an ancient period, and have long been employed there for weighing diamonds. The *carat* of the civilized world is an imaginary weight, consisting of four nominal grains, a little lighter than four grains troy. *Ery, Dictionary of Arts, Manufactures, and Mines, Diamond*.

Carbine. s. [Fr. *carabine*.]

1. Small sort of firearm.

He might have strengthened his surmise by a reference to the English *cudgel*, which is an obvious modification of the same word.—*Widgwood, Dictionary of English Etymology*.]

Casava. *s.* [Spanish, *cazabe*.] Bread made of the fecula obtained from the root of the tapioca plant (*Jatropha Manihot*).

The plant of whose root the Indian bread casava is made is a low herb; *Ger. Gerardus*, *Herball*, p. 153; ed. 1633.

The tubercles root consists principally of starch and a white milky poisonous juice. It is rasped and pressed to separate the juice, which deposits a fecula. The compressed pulp is dried in chimneys, exposed to the smoke, and afterwards powdered. In this state it constitutes casava powder. When dried or baked into cakes on plates of iron or clay, it constitutes casava, or cassava, bread.—*Pereira*, *Matéria Medica*.

The casava cakes sent to Europe (which I have eaten with pleasure) are composed almost entirely of starch, along with a few fibres of ligneous matter. It may be purified by diffusion through warm water, passing the milky mixture through a linen cloth, evaporating the strained liquid over the fire, with constant agitation. The starch evolved by the heat, thickens as the water evaporates; but, on being stirred, it granulates, and must be finally dried in a proper stove. The product obtained by this treatment is known in commerce under the name of tapioca; and being starch, very nearly pure, is often prescribed by physicians as an aliment of easy digestion. A tolerably good imitation of it is made by heating, stirring, and drying potato starch in a similar way.—*Liebig*, *Dictionary of Arts, Manufactures, and Mines*.

b. Instance in point.

But in this, as in almost every other dispute, it usually happens that much time is lost in referring to a multitude of cases and precedents, which prove nothing to the purpose, or in maintaining propositions, which are either not disputed, or, whether they be admitted or denied, are entirely indifferent to the matter in debate.—*Letters of Junius*, let. 25.

In the following extract it is used either adjectively or as the first element in a compound, and means *casuistical*.

5. In Grammar. See extracts.

The several changes which the noun undergoes in the Latin and Greek languages, in the several numbers, are called *cases*, and are designed to express the several views or relations under which the mind considers things with regard to one another; and the variation of the noun for this purpose is called declension. — *Clark, Latin Grammar.*

Sometimes grammarians use this word [case] to signify (which is its strict sense) a certain variation in the writing and utterance of a noun, denoting the relation in which it stands to some other part of the sentence; sometimes to denote that relation itself, whether indicated by the termination, or by a preposition, or by its education. . . . Much confusion and frivolous debate has hence resulted. Whoever would see a specimen of this, may find it in the *Port Royal Greek Grammar*; in which the authors insist on giving the Greek language an ablative *case*, with the same termination, however, as the dative; (though, by the way, they had better have fixed on the genitive; which often answers to the Latin ablative) ureine, and with great truth, that if a distinct termination be necessary to constitute a *case*, many Latin nouns will be without an ablative, some without a genitive or without a dative, and all nouns without an accusative. And they add, that since it is possible, in every instance, to render into Greek the Latin ablative, consequently there must be no ablative in Greek. If they had known and recollected that in the language of Lapland, there are, as we are told, thirteen *cases*, they would have hesitated to use an argument which would prove that there must therefore be thirteen *cases* in Greek and Latin also! All this confusion might have been avoided, if it had but been observed that the word *case* is used in two senses. — *Whately, Logic, Appendix, no. 1, Ambiguous Terms, Case.*

In case, if it should happen; upon the supposition that.

For *in case* it be certain, hard it cannot be for them to show us where we shall find it; that we may say these were the orders of the apostles. — *Hooker.*

This would be the accomplishment of their common felicity, *in case*, either by their evil destiny or advice, they suffer not the occasion to be lost. — *Sir J. Hayward.*

All a case. All the same; a matter of indifference.

I can but be a slave where-ever I am; so that taken or not taken, 'tis all a case to me. — *Sir R. L. Estcourt.*

Casehardening, verbal abs. Hardening on the outside, generally iron by steeling the surface.

The manner of casehardening is thus: Take cow horn or hoof, dry it thoroughly in an oven, then beat it to powder; put about the same quantity of bay salt to it, and mingle them together with stale chamberlye, or else white wine vinegar. Lay some of this mixture upon loam, and cover your iron all over with it; then wrap the loam about all, and lay it upon the hearth of the forge to dry and harden. Put it into the fire, and blow up the coals to it, till the whole lump have just a blood-red heat. — *Moreau, Mechanical Exercises.*

Casehardening is the name of the process by which iron tools, keys, &c., have their surface converted into steel. Steel when very hard is brittle, and iron alone is, for many purposes, too soft for use. It is, therefore, an important desideratum to combine the hardness of a steady surface with the toughness of an iron body. These requisites are united by the process of case-hardening. — *Vre, Dictionary of Arts, Manufactures, and Mines.*

(Florio.) *Casemate*, a loop-hole in a fortified wall. (Cudworth.) 'A vault of mason's work in the flank of a bastion next the curtain, to fire on the enemy.' (Bailey.) If we should find a father corrupting his son, or a mother her daughter, we must charge this upon a peculiar anomaly and baseness of nature; if the same of nature may be allowed to that which seems to be either *cashiering* of it, and deviation from, and a contradiction to, the common principles of humanity. — *South.*

Such was the first solemn, deliberate, authoritative act by which a General Council assumed a power superior to the Papacy. . . . It assumed a dictatorial right in a representative body of the Church to sit as a judicial tribunal, with confidence of the title by which Papal authority was exercised. . . . It was much less a decision on a contested election; it was the *cashiering* of both, and that not on account of irregularity or invalidity of title, but of crimes and excesses subject to ecclesiastical cen-

sure; it was a sentence of deposition and deprivation, not of uncanonical election.—*Milman, History of Latin Christianity*, ii. xlii. ch. v.

Like hunted *castors* conscious of their stay,
Their wayward wealth to Norway's coast they bring. *Dryden*.

In Castor Oil, the construction is either *adjectival*, or that of the first element in a compound. The oil itself has nothing to do with *castor* = beaver, in respect to its origin; but is expressed from the Ricinus Palma Christi, and resembles Castoreum only in its smell, and some reputed qualities.

Castor. s. See Castoreum.

Castoreum. s. [Lat.] In Medicine. Secretion from a special gland in the Castor Fiber.

Chemists, and in particular Boisson, Lagrange, Lavoisier, and Hildebrandt, have examined *castor*, and found it to be composed of a resin, a fatty substance, a volatile oil, an extractive matter, benzoic acid, and some salts. The mode of preparing it is very simple. The sacs are cut off from the *castors* when they are killed, and are dried to prevent the skin being affected by the weather. In this state the interior substance is solid, of a dark colour, and a faint smell; it softens with heat. When chewed, it adheres to the teeth somewhat like wax; it has a bitter, slightly acrid, and nauseous taste. The *castoreum*, as imported, are often joined in pairs by a kind of lincure. Sometimes the substance which constitutes their value is sophisticated, a portion of the *castor* being extracted, and replaced by lead, clay, gums, or some other foreign matters. This fraud may easily be detected, even when it exists in small degrees, by the absence of the membranous partitions in the interior of the bags, as well as by the altered smell and taste. The

Castrato. v. [Lat. *castratus*, part. from *castra*.] Geld; emasculate.

Casualty. s. (used also adjectively: the *casualty* ward in a hospital being the ward for accidents; thence the simple term for the room for receiving out-patients, and *casualty* patient = out-patient).

1. Accident.

a. In the sense of a thing happening by chance, not by design.

And soundest *casualists* doubt like you and me? *Page*.

Gentle *casualist*, I leave it to thee to conjecture, whether the blush (for there was one between us) was the property of the nymph or the swain in this

dilemma.—*Lamb, Essays of Elia, Detached Thoughts on Books and Reading.*

Casualist. *adj.* Relating to cases of conscience; containing the doctrine relating to cases.

What arguments they have to bewail poor, simple, unstable souls with, I know not; but surely the practical, *casualist*, that is, the principal, vital part of their religion savours very little of spirituality. *South.*

C. Lewis, On the Influence of Authority in Matters of Opinion*, etc. v.

Cat. *s.* [?] Three-masted vessel of Norwegian build used in the coal trade.

There are vessels, at this day, which are common upon the northern part of the English coast, and are called *cats*. Part of the harbour at Plymouth is called catwater, undoubtedly from ships of this denomination, which were once common in those parts.—*Bryant, Observations on Rowley's Poems*.

Cat. *s.* [Lat. *catus*.] Animal of the genus Felis.

A *cat*, as she beholds the light, draws the ball of her eye small and long, being covered over with a green skin, and dilates it at pleasure.—*Peachment, Complaint of Gentlemen*.

Used metaphorically.

'Twas you fencers'd the rabble;
Cats, that can juggle as dilly of his worth;
As I can of those mysteries, which Heaven
Will not have eartl' to know.

Shakespeare, Coriolanus, iv. 2.

Cat. *s.* Colloquial for Cat-o'-nine-tails. *Not (or just) room to swing a cat.* Phrase applied to narrow berths, boxes, or apartments. (This connection, at least, the editor thinks preferable to the notion that *cat* here means the animal so called.)

Now mark the contrast at London. I am pent up in frowzy lodgings, where there is not room enough to swing a cat; and I breathe the steams of endless putrefaction.—*Smollett, Expedition of Humphrey Clinker*.

Cat in pan. [probably no connection with *cat* as an English word at all; but the catachrestic transformation of some misunderstood foreign term.] The meaning of *turning the cat in the pan* does not seem to have been always the same; or, what is more probable, the exact import of the phrase was not always understood. (The construction is by no means unequivocal; since *turn* may be either active, and govern *cat*, or neuter, as in 'turn king's evidence'.)

1. Transfer of a charge of calumny.

A subtle *turning the cat in the pan*, or wresting of a false thing to some purpose.—*Holcroft, Dictionary*.

When George, at pudding-time, came o'er,
And moderate men look'd big, sir;

Until my dying day, sir,
That, whatsoever king shall reign,
I'll be the Vicar of Bray, sir.

Song.

In *Geology* it has taken a technical meaning, signifying a sudden or violent rush of water, considered as the efficient cause by which certain phenomena have been produced, rather than by the gradual action of moderate currents, or by that of ice. As such, it has as its adjectives *Cataclysmal* and *Cataclysmic*.

Catacomb. *s.* [see last extract.]

On the side of Naples are the *catacombs*, which must have been full of stench, if the dead bodies that lay in them were left to rot in open niches.—*Adelphi, Travels in Italy*.

The *Dictionary Etymologique* says that the name is given in Italy to the tombs of the martyrs which people go to visit by way of devotion. This would tend to support Diez's explanation from Spanish, *cata*, to look at, and *tomb*, a tomb (as the word is also spelt *catacombs* and *catacombs*), or *combar*, a vault, which however is not satisfactory, as *show* is not the primary point of view in which the tombs of the martyrs were likely to have been considered in early times. Moreover the name was apparently confined to certain old quarries used as burial places near Rome. Others explain it from *cata*, down, and *combar*, a cavity. —*Walwood, Dictionary of English Etymology*.]

Catadupe. *s.* [Gr. *κατάδουπος* = catarnet of the Nile: from *κατά* = down, *δουπος* = make a loud sound in falling.] Catarnet; waterfall: (applied by way of eminence to those of the Nile, and also to the inhabitants near them). *Rare.*

Catalépsy and *Ecstasy*, although treated of by some writers as distinct affections, generally present very nearly the same pathological conditions. ... This disease is very rare; so much so, that its existence has been doubted by many writers, who consider it to have been feigned. Its occasional occurrence, however, is well ascertained. I have seen one case of it in my own practice, and have been consulted by letter respecting a second. —*Croft, Dictionary of Practical Medicine*.

It is in point to notice also the structure and style of Scripture, a structure so mysterious and various, and a style so figurative and indirect, that no one would presume at first sight to say what is in it and what is not. An interesting class of decompositions has of late attracted considerable attention, as, as they cannot be accounted for on the ordinary laws of chemical affinity, have been referred by Berzelius to a new power, or rather new form of the force of chemical affinity, which he has distinguished as the *catalytic* force and the effect of its action as *catalytic*.

gla. . . A body in which this power resides resolve others into new compounds, merely by its contact with them, or by an action of pressure, as it has been termed, without adding or losing anything itself. Thus an acid converts a solution of starch (at a certain temperature) first into gum and then into sugar of grapes, although no combination takes place between the elements of the acid and those of the starch, the acid being found free and undiminished in quantity after effecting the change.—*Orabam Elements of Chemistry*, p. 186.

Cátamarán. *s.* [?] See extract.

The *cátamaráns* used in the Brazils, and which are also common in the East Indies, consist of three logs of wood tapered at one end and lashed together. These used in the Brazils also carry sail.—*Young, Nautical Dictionary*.

Of heav'n's wet net, on the earth shall pour
Rain day and night. *Milton, Paradise Lost*, xi. 824.
Tornadoes and loud impetuous *cátaracts*,
Through roads abrupt, and rude unfashion'd tracts,
372

Run down the lofty mountain's channel'd sides,
And to the vale convey their foaming tides.
Sir R. Blackmore.

Applied, like stream and other similar words,

What if all
Her stores were open'd, and this fragment
Of hell should spout her *cátaracts* of fire?
Milton, Paradise Lost, li. 174.

2. In *Medicine*. Opacity of the capsule of the lens of the eye.

Saladine hath a yellow milk, which hath likewise much acrimony; for it cleareth the eyes; it is good also for *cátaracts*.—*Bacon, Natural and Experimental History*.

And accordingly, a deaf-mute, before he has been taught a language—either the finger-language, or reading,—cannot carry on a train of reasoning any more than a brute. He differs indeed from a brute in possessing the mental capability of employing language; but he can no more make use of that capability till he is in possession of some system of arbitrary general-signs, than a person born blind from *cátaract* can make use of his capacity of seeing, till the *cátaract* is removed.—*Whately, Elements of Logic*, introd.

The *cátarrhal* fever requires evacuations.—*Sir J. Poyser*.

Old age attended with a phthisis, cold, *cátarrhus*, leucophlegmatic constitution.—*Arbuthnot, On the Nature and Cause of Mankind*.

Cátasterism. *s.* [Gr. *καταστερισμός*, from *κατά*—star.] See extract.

Ptolemy makes no mention of the star or the story, and his catalogue contains no bright star which is not found in the "Cátasterism" of Eudoxos. These *Cátasterisms* were an enumeration of 473 of the principal stars according to the constellations in which they are and were published about sixty years before Hipparchus.—*Barthol, History of the Inductive Sciences*, b. i. ch. iv. § 1.

There are, in the paleontological sciences, two antagonistic doctrines: *cátastrophical* and uniformity. The doctrine of a uniform course of nature is tenable only when we extend the notion of uniformity so far that it shall include *cátastrophes*.—*Whewell, Novum Organum renovatum*, p. 25.

Cátastrophist. *s.* In *Geology*. See preceding entry, 3.

The *cátastrophist* constructs theories, the uniformitarian demolishes them. The former adduces evidence of an origin, the latter explains the evidence away. The *cátastrophist's* dogmatism is undetermined by the uniformitarian's skeptical hypotheses. But when these hypotheses are asserted dogmatically, they cease to be consistent with the doctrine of uniformity.—*Whewell, Novum Organum renovatum*, p. 25.

Cátell. *s.* Squeaking instrument used in the playhouse to condemn plays.

Or call the winds through long avenues to roar.
Proud to catch cold at a Venetian door. *Pope*.

The production of the consequent required that they should all exist immediately previous, though not that they should all begin to exist immediately previous. The statement of the cause is mechanical; unless in some shape or other we introduce all the conditions. A man takes mercury, goes out of doors, and catches cold. We say, perhaps, that the cause of his taking cold was exposure to the air. It is clear, however, that his having taken mercury may have been a necessary condition of his catching cold.—*J. S. Mill, System of Logic*, b. iii. c. v. § 3.

Catch at. Endeavour suddenly to lay hold on.

In Syria too the schools were private, a circumstance which would tend both to diversity in religious opinion, and inattention in the expression of it; but the sole *catechetical* school of Egypt was the organ of the church, and its bishop could banish Origen for speculations which developed and ripened with impunity in Syria.—*Newman, Development of Christian Doctrine, v. 2.*

Categorém. s. [*Gr. kateghōmēnē*.] Categorématic word. See extract.

Similarly, names are called categorématic words, or *categorémata*, because they can be predicated independently of any other word. Some logicians would exclude adjective names from the class of *categorémata*, and reduce the latter to substantive names only. . . . As a proof of this, they say that an adjective cannot stand as subject of a proposition unless accompanied by the definite article, and in the plural number.—*Shedd, Elements of Logic*, ch. ii.

Categorématic. adj. Conveying a whole term, i.e. either the subject or predicate of a proposition, in a single word.

It is evident that a term may consist either of one word or of several; and that it is not every word that is *categorématic*, i.e. capable of being employed by itself as a term. Adverbs, prepositions, &c., and also nouns in any other case besides the nominative, are syncategorématic, i.e. can only form part of a term. A nominative noun may be by itself a term. A verb (all except the substantive-verb) is also an equal is a mixed word, being resolved into the Copula and Predicate, to which it is equivalent; and, indeed, is often so resolved in the mere rendering out of one language into another; as 'ipse adest,' 'he is present.'—*Whately, Elements of Logic*, b. ii. ch. i. § 3.

Categorématic. adj. Same as Categorématic.

Can there possibly be two *categorématic* words, positive substantival infinitives; or can it be that a finite should, remaining finite, yet not be finite, but infinite and innumerable places at once?—*Jeremy Taylor, Real Presence*, sec. 11, § 14. (Ord MS.)

Categorématically. adv. In a categorématic manner.

Categorématic. adj. Absolute; adequate; positive; equal to the thing to be expressed.

The king's commissioners desired to know whether the parliament's commissioners did believe that bishops were unlawful? They could never obtain a categorématic answer.—*Lord Clarendon*.

A single proposition, which is also categorématic, may be divided again into simple and complex.—*Watts, Logic*.

Propositions considered merely as sentences, are distinguished into *categorématic* and hypothetical. The *categorématic* asserts simply that the predicate does, or does not, apply to the subject; as 'The world had an intelligent maker.' 'Man is not capable of raising himself, unassisted, from the savage to the civilized state.' The hypothetical . . . makes its assertion under a condition, or with an alternative; as 'If the world is not the work of chance, it must have had an intelligent maker.' . . . The division of propositions into *categorématic* and hypothetical, is, as has been said, a division of them considered merely as sentences; for a like distinction might be extended to other kinds of sentences also. Thus, 'Are men capable of raising themselves to civilization?' 'Go and study books of travels,' are what might be called 'if sentences,' though not propositions.—*Whately, Elements of Logic*, b. ii. ch. ii. § 1.

Categorématic. s. Absolute, or unconditional, affirmative or negative (as *yes* or *no*).

A hypothetical proposition is defined to be two or more *categorématic* united by a copula (conjunction); and the different kinds of hypothetical propositions are named from their respective conjunctions, viz. conditional, disjunctive, causal, &c. . . . But when the reasoning itself rests on the hypothesis (in which way a categorématic conclusion may be drawn from a hypothetical premise), this is what is called hypothetical syllogism; and rules have been devised for ascertaining the validity of such arguments at once, without bringing them into the categorématic form. (And note, that in these syllogisms, the hypothetical premise is called the major, and the categorématic one the minor.—*Whately, Elements of Logic*, b. ii. ch. iv. § 2.

Categorématic. adv. Directly; expressly; positively; plainly: (as *yes* or *no*).

We must not look, from them, for either discourses, or demonstrations, or positions, directly and categorématic to this purpose.—*Fotherby, Athomastice*, p. 255.

Aster is drawn with a pot pouring forth water, with which descend grasshoppers, *cáterpillars*, and creatures bred by moisture.—*Peascham, Compleat Gentleman*.

[The frequency with which the element cat appears in the designation of this animal in different dialects makes it probable that it is named from its resemblance to the tail of a cat, and so originally to the tail of a cat or a dog. Swiss, *tenfalkatz*; Lombard, *gatta*, *gattola* (literally, a cat or catkin, a little cat); French, *chenille* (Latin, *canicula*, a little dog), a *caterpillar*; Milanese, *can*, *capum* (a dog), a silkworm. The second half of the English word doubtless alludes to the destructive habits of the insect, piling the trees upon which it is bred. The same notion is expressed by the former element of the Swiss *tenfalkatz*. The French *chate-peleuse*, a weevil (Norman, *carpeuse*, a caterpillar, is probably an accommodation from the English *caterpillar*; it may be formed from *chate*, *chacon*, a chat or catkin, with allusion to the hairy aspect of a caterpillar; Italian, *bruca pelosa*.—*Wedgwood, Dictionary of English Etymology*.]

Arbuthnot.

Cátfish. s. Anarrhichas Lupus, wolf-fish, sea-wolf, or sea-cat. (Though heard among fishermen, the compound in this form is not found in Yarrell. He gives however *sea-cat*, and, as may be seen under Catlike, recognizes the composition.) Popular or local.

Cátgut. s. See extract.

Cátgut is the name absurdly enough given to cords made of the twisted intestines of sheep. . . . It has long been a subject of complaint . . . that *cátgut* strings cannot be made in England of the same goodness and strength as those imported from Italy.—*Coxe, Dictionary of Arts, Manufactures, and Mines*.

Cátharist. s. [*Gr. kathnps* = pure.] One who holds himself more pure than others; puritan; member of a sect so called.

Catholic signifieth not the Romish church: it signifieth the consent of all true teaching churches of all times, and all ages.—*Hogers, in Foxe's Book of Martyrs*, 1565.

If such stuff as this may goe for argument, we may be eloyed with them in those unnumberable authors, *Silence* Metaphysics for the Greeks, and *Jacobus de Voragine* for the Latin, who make it a trade to lay for God and for the interest of the *catholic* cause.—*Jeremy Taylor, Real Presence*, sec. 10. § 6. (Ord MS.)

b. In the common sense.

Catholicism. *s.*

1. Universality, or the orthodox faith of the whole church, called catholic, that is, universal.

There is a church which is holy, and which is catholic; and I understand that church above, which is both catholic and holy; and, being this, holiness and catholicism are but affections of this church which I believe, I must first declare what is the nature and notion of the church, &c.—*Bishop Pearson, Exposition of the Creed*, art. iv.

Near akin to their notion of church authority is that of *catholicism*.—A particular church, indeed, may be catholic in one sense, i.e. true, sound, and pure, and holding the catholic doctrine; but not catholic, i.e. universal. To say Roman-Catholic therefore, as they the Papists mean it, is to say 'part-whole,' which is a contradiction. The church of Rome, notwithstanding her boasts, is but a part of the catholic church.—*Trapp, Popery truly stated*, i. § 2.

The subject then varied to Roman Catholicism, and he gave us an account of a controversy he had had with a very sensible priest in Sicily on the worship of saints.—*Cubridge, Table Talk*.

2. Adherence to the Romish church; condition or tendency of a Roman Catholic.

Though they conform to the Roman Catholic mode of worship, they are looked upon in the light of unbelievers; but all the episcopi I have conversed with, assured me of their sound *catholicism*.—*Steuernburg, Travels through Spain*, let. 23.

Catholicity. *s.* Catholic character.

It admits of being interpreted in one of two ways: if it be narrowed for the purpose of disproving the catholicity of the creed of Pope Pius, it becomes also an objection to the Athanasian; and if it be relaxed to admit the doctrines retained by the English Church, it no longer excludes certain doctrines of Rome which that church denies. *Newman, Development of Christian Doctrine*, introd.

Whether the majority be large or small, the catholic church is, as so understood, nothing more than a majority of Christians; its universality, in the view even of its advocates, is merely a pretence, and a demand of numbers over the ignorant sects, and therefore, an appeal to the catholicity of the church, in proof that its doctrines are true, is an appeal to the voice of the multitude upon a dispute as to truth.—*Ibid.*, ch. iv.

Catholicity. *adv.* Generally.

No drugist of the soul bestow'd on all

So *catholically* a curing countess.

Sir L. Cary, Elegy on the Death of Donne.

Independently of a foreboding-looking *cat-like* head, with an exceedingly thick coarse skin covered with slime, it possesses most formidable teeth, and neither wants it will nor the power to attack others or defend itself.—*Fuerdt, British Fishes*, *Acipenser lupus*.

Catling. *s.* Catgut; fiddle string. *Rare*.

What music fire will be in him when Hector has knocked out his brains, I know not. But I am sure, none unless the fiddle Apollo got his fingers to make catlings out.—*St. Asaph, Troubles and Crosses*, vi. 3.

Catmint. *s.* [see extract.] Plant so called (Nepeta Cataria).

The later herbiers do not call it *Herba cataria* and *Herba catia*, because the cats are very much delighted herewith, for the smell of it is so pleasant to them that they rub themselves upon it, and wallow and tumble in it, and also feed on the branches and leaves very greedily. It is named by the poets *Nepeta*; but *nepeia* is properly called as we have said *Wild penny-royal*; in High Dutch, *Katzen munt*; in Low Dutch, *Cattemint*; in Italian, *Catmura* or *Herba catia*; in Spanish, *Yerva cataria*; in English, *Catmint*, or *Ne* and *Nep*. Catcradle. *s.* Child's game in which the players take a looped string off each other's fingers alternately, giving a different form at each remove.

Catseys. *s.* Variety of quartz. See extract.

Catseys is of a glistering grey, interchanged with a straw colour. *Woodward, On Fossils*.

The *catseys* is one of the jewels of which the Soudanese are especially proud, from a belief that it is only found in their island; but in this I apprehend they are misinformed, as specimens of equal merit have been brought from Quilon and Cochim, on the southern coast of Hindustan. The *catseys* is a greenish translucent quartz, and when cut in cabochon it presents a moving internal reflexion which is ascribed to the presence of asbestos. The perfection is estimated by the natives in proportion to the narrowness and sharpness of the ray, and the pure olive-tint of the ground over which it plays.—*Sir J. R. Tennent, Ceylon*, pt. i. ch. i.

Catsfoot. *s.* Indigenous plant so called: (? according to the extract, the Ground-ivy, *Glechoma hederacea*; ? according to Hooker and Arnott, *Antennaria dioica*).

They took the enterprise upon themselves, and made themselves the people's *cat's-paw*. But now the chestnut is taken from the cinders, and the monkey is coming in for the benefit of the cat's subservience. Germany has conquered her kinsmen, and will not readily suffer the victory to slip through her fingers.—*Times*, July 20, 1844.

Since Granville was turned out, there has been no *cauliflower* in this nation worth the meal that whitened his periwig. They are so ignorant, they scarce know a crab from a *cauliflower*; and then they are such dunces, that there's no making them comprehend the plainest proposition. *Smollett, Expedition of Humphrey Clinker*.

The *cauliflower* is one of the most delicate and nutritious of the whole of the Brassica tribe, the flower-buds forming a close firm cluster or head, white and delicate, and for the sake of which the plant is cultivated. *London, Encyclopædia of Gardening*.

Caulking. verbal obs. [see extract.]

Caulking, caulking, or caulking in shipbuilding [is] the operation of driving a quantity of oakum, or old ropes unwarped and drawn asunder, into the seams of the planks, or into the intervals where the planks are joined to each other in the sides or decks of the ship, in order to prevent the entrance of water. After the oakum is driven very hard into these seams, it is covered with hot melted pitch or resin to keep the water from rotting it. . . . Kevelin derives the word from the barbarous Latin Calcaum, shining. *Rees, Cyclopædia*, in voce.

Caulking-iron. s. Iron chisel for driving the oakum into the seams of ship-builders.

He [Peter the Great of Russia] repaired to Amsterdam, took a looking in the dockyard, assumed the garb of a pilot, put down his name on the list of workmen, wielded with his own hand the *caulking iron* and the mallet, fixed the pumps, and twisted the ropes. Ambassadors who came to pay their respects to him were fawed, much against their will, to clamber up the rigging of a man of war, and found him enthroned on the cross trees.—*Macleay, History of England*, ch. xxiii.

Caulponize. c. n. [Lat. *caupo*, = inn-keeper, victualler.] Sell wine or victuals.

Causable. adj. Capable of being caused or effected by a cause. *Rare*.

That may be miraculously effected in one which is naturally *causable* in another. *Sir T. Browne, Vulgar Errors*.

Causal. adj. Relating to causes; implying or containing causes.

Every motion owning a dependence on prerequisite motions, we can have no true knowledge of any, except we would distinctly pry into the whole method of causal connections.—*Glasse, Sceptical Scientifics*.

Causal propositions are, where two propositions are joined by causal particles; as, houses were not built, that they might be destroyed; Robinson was

unhappy, because he followed evil counsel.—*Watts, Logic*.

But again; not only must we, in aiming at the formation of a *causal* section in each science of phenomena, consider fluids and their various modes of operation admissible, as well as centers of mechanical force; but we must be prepared, if it be necessary, to consider the forces or powers to which we refer the phenomena, under still more general aspects, and invested with characters different from mere mechanical force.—*Whewell, Novum Organum renovatum*, p. 121.

Causality. s. Agency of a cause; quality of causing. See Causation.

As he created all things, so he is beyond and in them all, in his very essence, as being the soul of their *causalities*, and the essential cause of their existences. *Sir T. Browne, Vulgar Errors*.

By an unadvised transference from the effect to the remotest cause, we observe not the connection, through the interposal of more immediate *causalities*. *Glasse, Sceptical Scientifics*.

But further;—though the Supreme Cause must thus be inconceivably different from all subordinate causes, and immeasurably elevated above them all, it must still include in itself all that is essential to each of them, by virtue of that very circumstance that it is the cause of their *causalities*.—*Whewell, Novum Organum renovatum*, b. iii. ch. x. art. 7.

Causally. adv. According to the order or series of causes.

Thus may it more be *causally* made out, what Hippocrates affirmeth.—*Sir T. Browne, Vulgar Errors*.

Causation. s. Act or power of causing.

(Though sometimes used indiscriminately, Causality is the commoner term in *Metaphysics*, where we look most to the connection of cause and effect; and Causation in *Physics*, where we look most for the exhibition of a force.)

Thus doth he sometimes include us in the conceits of stars and meteors, besides their allowable actions, ascribing effects thereto of independent *causation*. *Sir T. Browne, Vulgar Errors*.

We cannot fix the mind upon occurrences, without including these occurrences in a series of causes and effects. The relation of *causation* is an condition under which we think of events, as the relations of space are a condition under which we see objects.—*Whewell, History of Scientific Ideas*, i. 180.

The basis of all these logical operations is the law of *causation*. The validity of all the inductive methods depends on the assumption that every event, or the beginning of every phenomenon, must have some cause; some antecedent, on the existence of which it is invariably and unconditionally consequent. . . . The method of difference authorizes us to infer a general law from two instances; one, in which A exists together with a multitude of other circumstances, and B follows; another, in which A does not exist, and all other circumstances remaining the same, B is prevented. What, however, does this prove? It proves that B, in the particular instance, cannot have had any other cause than A; but to conclude from this that A was the cause, or that A will on other occasions be followed by B, is only allowable on the assumption that B must have some cause. . . . The universality of the law of *causation* is assumed in these things. . . . But in this assumption, we are warranted. . . . For this difficulty, which I have purposely stated in the strongest terms it would admit of, the school of metaphysicians who have long predominated in this country had a ready salvo. They affirm, that the universality of *causation* is a truth which we cannot help believing; that the belief in it is an instinct, one of the laws of our believing faculty.—*J. S. Mill, System of Logic*, b. ii. ch. xxi. § 1.

The order of the occurrence of phenomena in time is either successive or simultaneous; the uniformities, therefore, which obtain in their occurrence, are either uniformities of succession or of coexistence. Uniformities of succession are all comprehended under the law of *causation* and its consequences. Every phenomenon has a cause, which it invariably follows.—*Ibid.*, ch. xxi. § 1.

Causes of force would no longer represent the modes of *causation* which belonged to the phenomena. Polarization required some other contrivance, such as the undulatory theory supposed.—*Whewell, Novum Organum renovatum*, b. iii. ch. viii. art. 8.

There is nothing to be left void in a firm building; even the *cavities* ought not to be filled with rubbish, which is of a perishing kind.—*Dryden, Dedication to Æneid.*

An instrument with a small *cavity*, like a small spoon, dunt in oil, may fetch out the same.—*Arbuthnot, On the Nature and Choice of Aliments.*

If the atmosphere was reduced into water, it would not make an orb above thirty-two feet deep, which would soon be swallowed up by the *cavity* of the sea, and the depressed parts of the earth.—*Hentley.*

2. In Anatomy. See last extract.

The vowels are made by a free passage of breath,

vocalized through the *cavity* of the mouth; the said *cavity* being differently shaped by the postures of the throat, tongue, and lips.—*Holder, Elements of Speech.*

Materials packed together with wonderful art in the several *cavities* of the skull. *Addison, Spectator.*
Cavity . . . in Anatomy . . . is used to signify any excavation or even depression of more than ordinary depth, which may exist in or between the solid parts. Hence we find *cavities* existing in bones or formed by the junction of one or more bones; but we have likewise large excavations whose walls are of a more complicated arrangement, and which are destined to receive and protect those organs which are concerned in the functions of innervation, respiration, and digestion . . . namely the cephalic or cranial *cavity* containing the brain, the thoracic *cavity* containing the organs of respiration, and the abdominal *cavity* containing the organs of digestion and of the secretion of urine. To this last is appended, as a continuation, the pelvic *cavity*.—*Todd.*

Cávy. s. Animal of the genus *Cavia*; of which the guinea-pig is the best-known species. See extract.

The *cavies* are placed in the eighth and last division [of the Glires or Rodents]. They are among the largest-sized animals of this order, although, when compared with ordinary quadrupeds, they would be termed small. In these regions [certain parts of South America], however, are found the *cavies*, living much in the same manner, equally swift and equally indolent as hares, but clothed with hair so fine and thin, as to convey to the touch a feeling of coolness rather than of warmth. Their flesh, generally speaking, is excellent, as we can personally vouch for, these animals being the favourite game of the Brazilian hunters. The first sub-genus on the list is *Hydrochirus*, of which there is but one species, the *cayghara*, or water *cavy* of Brazil. Although it seems to inhabit the sides of nearly all the great rivers of South America, it is probably the largest animal in this order, measuring about three feet in total length.—*Swainson, History of Quadrupeds, p. 333.*

Caw. s. Note of the crow family.

The very rooks seem to have something hollow in that venerable *caw* which it always does me such good to hear.—*Sir R. L. Baker, Pilgrim, ch. liii.*

Caw. v. n. Cry as the rook, raven, or crow.

Russet-pated chonzies, many in sort,

Rising and *cawing* at the gun's report.

Shakespeare, Measure for Measure, ii. 2.

A walk of aged elms, so very high, that the rooks and crows upon the tops seem to be *cawing* in another region.—*Atkins.*

The rook, who hild amid the boughs,

In early spring, his airy city builds,

And censeless *caws*.—*Thomson, Spring.*

Cáxon. s. [?] Kind of wig.

He had two wigs, both pedantic, but of different

The one serene, smiling, fresh powdered, betokening a mild day. The other, an old, discoloured, unkempt, angry *caxon*, denoting frequent and bloody exertion. Woe to the school when he made his morning appearance in his *caxon*, or passionate wig.—*Laub, Christ's Hospital five and twenty Years ago.*

Cayenne, or Cayénne (pepper). s. (Common with an *adjectival* construction.) Powdered capsules of the *Capsicum frutescens*, a plant belonging to Solanaceae, and, as such, no true pepper. See Chillies.

Summer the sauce for a few minutes, and skim it well, then add salt should it be needed, a tolerable seasoning of pepper or of *cayenne*, in fine powder, from two to three teaspoonful of minced parsley, and the strained juice of a small lemon.—*E. Acton, Modern Cookery, p. 107.*

Cáyman. s. Name for the alligator. See extract.

The colonists and negroes give to this species [the crocodile of St. Domingo] the name of *cayman*. . . The tribe of *caymans*, as far as it is known at present, is confined to the continent of America. But the word *cayman* is generally employed by all European colonists to designate the crocodiles which are the most common among their habitations. Thus the *cayman* of St. Domingo is a true crocodile. Authors are but little agreed as to the origin of the name. Boutin will have it to be aboriginal to the East Indies, and Schouten is of the same opinion. Margrave tells us that it comes from *Couma*, and Rochefort that it was peculiar to the old inhabitants of the Antilles. M. de Tressac considers the assertion of Margrave to be the most correct. The slaves, on their arrival from Africa, at sight of a crocodile gave it immediately the name of *cayman*. It would appear from this that it was the negroes who spread the name throughout America, where it is employed even in Mexico.—*Translation of Currier's Région Animal, Savri, ix. 100.*

Casique. s. Title given by the Spaniards to the petty kings and chiefs of several countries in America.

The principal *casique* of the island came to visit Cortes, with a numerous but ill-appointed equipage.—*Zuñiga, Conquest of Mexico, l. 13.*

Cáson. s. [Fr. *gazon* = turf.] As the editor has little doubt as to the accuracy of the derivation, he looks upon this as the right spelling. The word is local. In Lincolnshire, and doubtless elsewhere, it has exactly the meaning it bears in the extract. The original application, however, was to the squares of dried turf more usually sold as Peat.

God permitted him to take other fuel, namely, cow's dung, dried *cassus*, to bake his bread with.—*Waterland, Scripture condensed, iii. 94.*

Cease. s. [? *decease*.] Extinction; failure. *Rare.*

The *cease* of majesty
Dies not alone, but, like a gulph, withdraws
What's near it with it. *Shakespeare, Hamlet, iii. 3.*

Ceaso. v. n. [Fr. *cesser*; Lat. *cesso*.]

Let not the more

Ceaso I to wander, where the Muses hunt

Clear spring, or shady grove, or sunny hill,

Suit with the love of sacred song.

My brother's be your most peculiar care. *Dryden.*

2. Fail; be extinct; pass away.

The poor shall never *cease* out of the land.—*Deuteronomy, xv. 11.*

The soul being removed, the faculties and operations of sense, intellect, *cease* from that modes corporeal, and are no longer in it.—*Sir M. Hale, Origin of Manhood.*

3. Be at an end.

But now the wonder *ceases*, since I see

She kept them only, Tityrus, for thee. *Dryden.*

4. Rest.

The ministers of Christ have *ceased* from their labours. *Bishop Speed.*

Ceaso. v. n. Put a stop to; put an end to.

Importune him for my monies; he not *ceas'd*

With night denial. *Shakespeare, Timon of Athens, ii. 1.*

You may sooner, by imagination, quicken or slack

a mortal, than raise or *cease* it; as it is easier to

make a dog go slower than to make him stand still.

—*Bacon, Natural and Experimental History.*

For even the very look of it repelled

All blastings, withered, . . .

It killed the fear of thunder and of death;

The disorders that conceit engendereth

'Twixt man and wife it for the time would *cease*;

The flames of love it quenched, and would increase.

Chapman, Translation of Ilia and Lauler.

Ceaso then this implies *cease*.

Addison, Paradise Lost, v. 845.

But He, her fears to *cease*.

Sent down the neck-ey'd Eve. *Id., Ode on the Morning of Christ's Nativity, 45.*

The discord is complete, nor can they *cease*

The dire debate, nor yet command the peace.

Dryden.

Ceáseless. adj. Incessant.

My quitted blood must quench the *ceaseless* fire,

On which my endless tears were bodiless spent.

Fairfax.

All these with *ceaseless* praise his works behold,

Both day and night. *Milton, Paradise Lost, iv. 679.*

Like an oak

That stands secure, though all the winds employ

Their *ceaseless* roar, and only sheds its leaves,

Or mast, which the revolving spring restores.

Philips.

Fast and hot

Sir Robert Peel, who had escaped from Lord A. Verulam, escaped from Mr. Canting, escaped even from the Duke of Wellington in 1832, was at length caught in 1834; the victim of *ceaseless* intrigues,

who neither comprehended his position, nor that of his country.—*Disraeli the younger, Coningsby, h. ii. ch. i.*

Ceáselessly. adv. Incessantly; perpetually.

This universal quire

Prays *ceaselessly*. *Boone, Poems, p. 341.*

Cécity. s. [Lat. *cecitas, -utis*; Fr. *cecité*;

from *caecus* = blind.] Blindness; privation

of sight. *Rare.*

They are not blind, nor yet distinctly see; there is in them no *cecity*, yet more than a *cecity*; they have sight enough to discern the light, though not prisms to distinguish objects or colours. *Sir T. Browne, Vulgar Errors.*

Cécam. s. [Lat. *cecum*, neut. of *caecus* = blind, an adjective used as a substantive,

the word understood being *intrastinum* = intestine, or gut. Cecal and Ceciform are among its derivatives.] In *Anatomy*. Part of the intestinal canal where the small intestines join the large, or the part between the ileum and colon, which from bulging in a lateral direction may be treated as if it had no outlet, and were therefore a *blind gut*, though it is really continuous with the colon.

The resemblance of the *cecum* to the stomach in gizzardiness, and particularly the ruminating animals, as well as its form and situation throughout all the higher classes of the animal kingdom, are circumstances showing that it is an important viscus, and one in which the last act of digestion is performed. — *Copland, Dictionary of Practical Medicine*, in voce.

Cecitency. *s.* Tendency to blindness; claudication of sight. *Rare*.

(For example see extract under *Cerity*.)

Cedar. *s.* (common with *penicil*, &c., in an adjectival construction.) [A.S. *ceder*; Lat. *cedrus*.] Coniferous tree so called: (especially *Cedrus Libani*).

I must yield my body to the earth;
Thus yields the cedar to the axe's edge.
Whose trunk gave shelter to the princely eagle;
Under whose shade the ramping lion slept,
Whose top branch overtopped Jove's spreading tree,
And kept low shrubs from winter's powerful wind.
Shakspeare, Henry VI, Part III, sc. 2.

Cedarlike. *adj.* Resembling a cedar tree.

His tall
And growing gravity, so cedar-like.

B. Jonson, New Inn.

Cedarn. *adj.* Of or belonging to the cedar tree. *Obsolete*.

West winds, with musky wine,
About the cedarn alleys bling
Nard and Cassia's balmy smells. *Milton, Comus, 980.*

Cedo. *v. n.* [Fr. *céder*; Lat. *cedo*.] Yield: (in the following extract it means *lapse*, and is, probably, an intentional Latinism).

This fertile eldrie, this fair domain,
Had well nigh *ceded* to the shafted hamps
Of monks libidinous. *Shakspeare, Ruined Abbey.*

Cedo. *v. a.* Resign; give up.

That honour was entirely *ceded* to the Parthian;
royal race. *Drummond, Truce, p. 236: 1751.*

By the peace of Paris, in 1763, it [Dominion] was
ceded in express terms to the English. *Catholic Geography.*

Of course Galicia was not to be *ceded* in this summary manner. Of course, too, its cession by the Austrian government would, in any case, be an act not of simple virtue, but of high political necessity. — *Edwards, Polish Captivity*, vol. ii, ch. ii.

Cedary. *adj.* Resembling cedar; of the colour of cedar wood. *Rare*.

That which comes from Lebanon being luscious, staid, and clear, and of a yellow or more cedary colour, is esteemed much before the white. — *Evelyn, Sylva*, ii, 3, § 2.

Ceduous. *adj.* [Lat. *cedo* cut down.] Adapted for felling: (applied to trees grown for timber). *Rare*.

These we shall divide into the greater and more ceduous, fruitless, and shrubby. — *Evelyn, Sylva, Introduction*, § 3.

Cee. *s.* Name of the third letter in the Latin alphabet; and, as in one of Latin origin, in the English also.

In the Greek and Hebrew the names of the third letters were *gamma* and *gimel* respectively; their sound being that of the English and Latin *g*, as in *goose* and *grace*. Their forms, however, were those out of which the present *C* has grown, and their place in the alphabet was that of the modern letter.

In Latin this sound afterwards changed; and the fact of its having done so is one of much importance in the history of spelling. When the original *g* took the sound of *k*, the equivalent to the true *k* of the Greek and Hebrew alphabets (*kappa* and *kuf*) became superfluous. Hence, having dropped out of the Latin, it has been avoided in many of the alphabets derived from it;

especially in those where the language was of Latin origin as well. For further remarks on this point see *Alacid*.

This eschewal of the use of *k*, wherever it can be avoided, is an influential principle in our own orthography; and, in the opinion of the editor, a mischievous one. Our language is not of Latin, but of German origin. Neither is *k*, as a letter, excluded from our alphabet, as it is from the French, the Italian, the Spanish, and the Portuguese. On the contrary, we have it without fully using it; the circumstances under which we avail ourselves of it being the following:—

When *C* precedes *e*, *i*, or *y*, it is liable to be sounded as *s*; and to escape this risk we have recourse to *k*. *King*, for instance, is spelt as it is, because *cing* would be in danger of being sounded *sing*; yet the Anglo-Saxon word was *cyning*. *King*, too, was *cyn*; and other examples could be added. These, however, are enough to show that, in respect to the German element of our language, nothing is gained from this letter in the way of etymological representation.

On the other hand, where *C* is sounded as *s*, *s* (as far as the sound is concerned) may be substituted for it.

Hence, *C* is, like *x* (*ks*) and *q* (*kw*), a redundant letter. It has its place in our alphabet; but it has it on etymological, rather than on phonetic, principles. Admitting the validity of those, the legitimate use of it is limited to words of Latin origin. That it goes far beyond may be seen under the entry already referred to, as well as under *Can* and *Ken*.

Historically, its prerogative over *k* is more defensible. As our alphabet was probably derived from the Latin through the British or Irish (for the German languages other than English used *k* from the beginning), *C* was the letter which in Anglo-Saxon represented the sound of *k*; but *k* was then wholly excluded. At present the two letters exist concurrently. The former, however, partly from its prerogative as the older letter, and partly from the Latin principle being unduly extended to words of Greek origin (in which language *C* had no existence), as well as to others from languages wholly foreign to the Latin, has encroached on the domain of the latter.

Preceding *h*, as in the *ch* of *chest* (*tshet*), &c., *C* approaches the character of a necessary, rather than a redundant, letter. Here, however, it is less a separate substantive sign than an element in a combination.

The complement to these remarks will be found under *Gee* and *Kay*.

This letter is derived from the Latin alphabet, in which it first appears. But even in that alphabet it originally possessed the power of *g*, as pronounced in *gesso*. Thus the Roman proper names *Cicero* and *Ciculus*, which retained this sound, are correctly represented in the Greek character by *Γαίος* and *Γαίλος*; and the Dorian inscription, the orthography of which, however, seems to belong to a later date than the events celebrated in it, presents *μακεδονας, λεγιωνας, πεντακτον, ρομειωνας*, in the place of the modern forms, *magistratus, legiones, quinquaginta, effugiant*. Indeed the poet Ausonius expressly states that *C* once performed the duty of *G*: *Gammæ vice functa prima G...* The letter *c* in English is pronounced as *s* before *i*, *e*, and *æ* before *a*, *o*, *u*. This variety in the power of the letter seems difficult to account for; but it may be observed that *i*, *e*, belong to one end of the vowel series, *a*, *o*, *u* to the other; and it is further to be noticed that the vowels *i* and *e*, when they precede vowels, have a power approaching to that of *y* in *goth*, and that if, in addition to this, *c* or *p* precede, there often results a sound like that at the begin-

ning of the words *church* and *John*, and this sound of *ch* is not very different from a sibilant. The vowels *i* and *e* produce a similar sound when preceded by a *d* or *t* and followed as before by a vowel. Thus from *ration* the Italians have obtained *ragione*; and from *radio*, *ruggia*; from *Diana* the rustics of ancient Italy made *Jana*. These considerations are perhaps supported by the employment of the little mark called *cedille* in the French language, which is used to denote that *a* is to be pronounced as an *s* even before the other vowels, as *ca*; for the mark appears to have been originally an *i*. — *Ky, The Alphabet*.

Ceil. *v. a.* Overlay, or cover, the inner roof of a building.

And the greater house he *ceiled* with fir-tree, which he overlaid with fine gold. — *Chronicles*, iii, 5.

How will he, from his house *ceiled* with cedar, be content with his Saviour's lot, not to have where to lay his head? — *Dr. H. More, Decay of Christian Piety*.

Ceiling. *s.* [see last extract.] Inner roof.

Varnish makes *ceilings* not only shine, but last. — *Bacon*.

And now the thickened sky
Like a dark *ceiling* stood; down rushed the rain
Impetuous. *Milton, Paradise Lost*, xi, 742.

So when the sun by day, or moon by night,
Strike on the polish'd brass their twinkling light,
The glittering species here and there divide,
And cast their dubious beams from side to side;
Now on the walls, now on the pavement play,
And to the *ceiling* flash the gliding day. — *Dryden*.

[*Ceiling*.] The modern spelling has probably arisen from an erroneous notion that the word is derived from French, *ciel*, till, canopy, tester; Italian, *chilo*, in the same senses, and also in that of English, *ceiling*. It was formerly written *seel*, having the meaning of wainscoting, covering with boards. To *seel* a room, lambrusser une chambre; *seeling*, lambris, menuiserie. (Sherwood.) Plancher, to plank or floor with planks, to *seel* or close with boards; plancher, a boarded floor, also a *seeling* of boards; planche, boarded, floored with planks, closed or *seeled* with boards. (Coqgrave.) The essential notion is thus denuding the room against draughts by closing or *sealing* up cracks, from Old French, *seal*, *seal*. We still use the metaphor in this sense of closing with respect to the eyes, sealed eyelids. French, *sealer* yeux, to *seel* or sew up the eyelids. Italian, *cegliere*, to *seel* a pigeon's eye. What we now call the *ceiling* was formerly called the *appece-eyling*, French *suslanieris*, to distinguish it from the *seeling* or wainscoting of the walls. The upper *seeling* of a house, *soffita*, *chilo*, (Torriano.) When wainscoting went out of use the distinctive qualification was no longer necessary, and the term *ceiling* was appropriated to the part of plaster which *seals* up the under side of the rafters in a room. — *Wagner's Dictionary of English Etymology*.

Celandine. *s.* [see last extract.] Name given to two native plants, the greater Celandine and the lesser Celandine. The former is the Chelidonium majus a papaveraceous, the latter the Ranunculus Ficaria (Pilewort and Buttercup) a ranunculaceous, plant. The evidence, however, that either of the terms has any claim to be considered a true vernacular name is but slight. They seem to represent merely the approximate translations of the systematic botanists.

The division into the *greater* and *lesser* is to be found in Pliny and in Dioscorides; the text of the former being obscure. 'Animalia quoque invenero herbas, in primis que *chelidonium*. Hæc enim hirsutius oculis pullorum in nilo restitunt visum, ut quidam volunt, etiam eritis oculis. Genera ejus dua, major fruticosa caule. . . . Minori folia cedra rotundiora, minus candida. Succus crævi mordax, semen papaveris.'

Now, unless we so construe the text as to separate the notice of the juice and the seed from the other notices of the Chelidonium minus, we meet with a difficulty; inasmuch as the papaveraceous, or poppy-like, seed is the characteristic of the *greater* species.

[Lat. *chelidonium*; Gr. *χελιδόνιον*, from *χελιδών*, swallow. 'Not,' says Cornille, 'because it first springs forth at the coming in of the swallows, or dieth when they go away, for, as we have said, it may be founde all the year, but because some hold opinion that with this herbe the thame restoreth.' An old notion quoted from Holæus, and copied by him from Pliny, and by Pliny from Aristotle. This wonderful fact is received and repeated by every bota-

nical writer of those days, and is embodied by Maecius in the couplet—

Cecilia pulchra hinc humina mater hirundo
(Plinius ut scripsit) quavis sint eruta reddita.
—*Dr. Prior, Popular Names of British Plants.*

Célebrity. *s.* [Fr. *celérité*; Lat. *celeritas*.] Swiftmess; speed; velocity.

We very well see in them, with this speed, a wonderful velocity of discourse; far, perceiving at the first but only some cause of suspicion, and fear lost it should be evil, they are presently, in one and the self-same breath, resolved, that what beginning so-

ever it had, there is no possibility it should be good.—*Hooker*.

Then, with imagin'd wings, our swift scene flies,
In motion with no less celerity
Than that of thought.

6. In *Anatomy*. Vesicle consisting of a nucleus, covering, and fluid, elementary to the tissues both vegetable and animal: (in this sense with numerous compounds and derivatives, as *Cellular*, *Cellulose*, &c.).

Hendle and others have questioned the title of the *Grammaire* to be regarded as an organic species of individual at all, or as anything more than a mass of cells. . . . In this *kolliker* published an elaborate monograph on the fluid and granular contents of the cells, and of the nucleus with (transversal) methods. . . . Sometimes the establishment of the two centres of assimilation or force separates the cells contents into two groups, without the conventional division of the cell-wall; but an inner partition-wall is developed. . . . It is believed that this is the result of the conjugation of two individuals. However this may be, another mode of propagation is then set up; the granules of the divided cells, contents, as if represented, develop cells, divide and subdivide, and are ultimately resolved into embryos having the form of Navicelle. . . . The firm nucleus of the *Grammaire* answers to that of the *Bayan* trich; the *cello-membrane* to the cellular membrane, and the granular contents to the moss-sprouts. . . . cells which surround the nucleus. The *Grammaire* may be regarded as a parasitic Mould, and the most simple of the animal kingdom. It differs from the *single-celled* plant by the contractility of its tissue, and the solubility of its cell-wall by acetic acid. *Thom, Lectures on Comparative Anatomy*, vol. iv.

1. Officer of Rome appointed to watch over

the conduct of the citizens, with power to

As to the judgment of Cato the censor, he was well
punished for his blasphemy against learning, in
the same kind wherein he offended; for when he
was just threescore years old, he was taken with an
extreme desire to go to school again, and to learn
the Greek tongue, to the end to pursue the Greek
authors; which both well demonstrate, that his
former censure of the Grecian learning was rather an
affected gravity, than according to the inward sense
of his own opinion. — *Bacon, Advancement of Learning*, i. (Ord MS.)

Public instruction; 5. *Censorship* of the press. — *See* G. C. Lewis, *On the Influence of Authority in Matters of Opinion*, ch. ix.

Freedom too was wanting, a want as fatal as that of either capital or skill. The press was not indeed at that moment under a general *censorship*. The licensing act, which had been passed soon after the Restoration, had expired in 1676. Any person might therefore print, at his own risk, a history, a sermon, or a poem, without the previous approbation of any officer; but the judges were unanimously of opinion that this liberty did not extend to Gazettes, and that, by the common law of England, no man, not authorised by the crown, had a right to publish judicial news. — *Macaulay, History of England*, ch. iii.

I shall say little here of the *census* of the Romans, it being a thing so well known; and shall only stay to remark, that there were, in their books or registers, not only the condition and quality of all people, but also their characters. — *Harris, On the third chapter of Isaiah*.

Cent. *s.* [Lat. *centum* = hundred. — This word is not only Latin in origin, and abbreviated in form, but it is generally part of a combination rather than a simple word; i.e. it is generally preceded by *per*, which is the Latin for *by*: thus *five per cent* is *five by the hundred*. In *cent per cent*, however, it is a separate word.] Hundred.

In one abundant shower of *cent per cent*. — *Pope*.

On her *centennial* day. — *Mason, Poems*.

Center. *s.* See Centre.

Of this nature is the maxim now stated. That in any combination of matter any low supported, the *center* of gravity will descend into the lowest position which the connexion of the parts allows it to assume by descending. It is easily seen that this maxim carries to a much greater extent the principle which the Greek mathematicians assumed, that every body has a *center* of gravity, that is, a point in which, if the whole matter of the body be collected, the effort will remain unchanged. — *Whevell, History of Scientific Ideas*, i. 225.

Centesimal. *s.* In Arithmetic. Hundredth part: (applied to the next step after *decimal* in fractions).

Centipede. *s.* Name given to annulose animals of the class *Insecta*: (applied in England to two long wingless animals, with a hard integument, the shape of a worm, and numerous legs, found in old wood and in soil). See *Millepede*.

The certainty with which an accidental pressure or unguarded touch is resisted and returned by a bite, makes the *centipede*, when it has taken up its temporary abode within the sleeve or fold of a dress, by far the most unwelcome of all the *Singulose* animals. The great size (little short of a foot in length) to which it sometimes attains renders it formidable. — *Sir J. E. Tennent, Ceylon*, pt. ii. ch. vii.

Each of the many legs of a *centipede*, under the influence of its own caudal, goes on receiving impressions and performing motions quite independent of the rest; continuing to do so after the creature has been cut in two. And on watching the wave of movements which progresses from end to end of the series of legs, seen still more clearly in a *Julius* it will be observed that at any moment each leg is in a different phase of its rhythmical movement; and that thus there are, at the same time, in the same organism, a great number of like changes, each at a separate stage of evolution. — *Herbert Spencer, Lectures of Biology*.

Centralize. *v. a.* Concentrate in some particular part, as an actual or conventional centre: (generally applied to the process by which the municipal or local administration of a country is overridden by the administration of the court or capital).

This Maudslayi was enabled to use in his attempt to centralize the power of the government. *Friday, History of the Greek Revolution*, l. v. c. iv.

Centrally. *adv.* (the *l* really denoted, i.e. *central-ly*.) With regard to the centre.

Though one of the feet most commonly bears the weight, yet the whole weight rests *centrally* upon it. *Druidon*.

Centre. *s.* [Lat. *centrum*; Gr. *κέντρον* = point.] Middle: that which is equally distant from all extremities.

If we frame an image of a round body all of fire, a flame proceeding from it would diffuse itself every way; so that the source, serving for the *centre* there, would be round about an huge sphere of fire and light. *Sir K. Digby, Treatise on the Nature of Bodies*.

Centre. *v. a.*

1. Place on a centre; fix as on a centre.

One foot he *centred*, and the other turn'd Round through the vast profundity pleasure. *Milton, Paradise Lost*, vii. 228.

2. Collect to a point.

By thy each look, and thought, and care, 'tis shown,
The joys are *centred* all in me alone. *Druidon*.
He may take a glance all the world over, and draw in all that wide air and circumference of sin and view, and *centre* it in his own breast. *South*.
O independent, regardless of thy own,
Whose thoughts are *centred* on thyself! *Druidon*.

I lost two children in their infancy, by the small-pox; so that I have one son only, in whom all our hopes are *centred*. *South, Expedition of Humphrey Chirk*.

Centre. *v. n.*

1. Rest on; repose on: (as bodies in equilibrium).

Where there is no visible truth wherein to *centre*, error is as wide as men's fancies, and may wander to eternity. *Dr. H. More, Discourse of Christian Philosophy*.

2. Be placed in the midst or centre.

As God in heaven
Is *centred*, yet extends to all: so thou,
Centring, never'st from all those eyes.
Milton, Paradise Lost, ix. 100.

3. Become collected to a point; gravitate.

What hopes you had in Diamonds, lay down:
Our hopes must *centre* in ourselves alone. *Druidon*.
The common acknowledgements of the body will at length *centre* in him, who appears sincerely to it at the common benefit. *Bishop Atterbury*.

Centric, and Centrical. *adj.* Placed in the centre.

They described an hyperbola, by changing the centripetal into a *centrifugal* force. *Chapman*.

In the same manner the *redifugal* force is not a distinct force in a strict sense, but only a certain result of the first law of motion, measured by the portion of *centrifugal* force which counteracts it. Comparisons of quantities so heterogeneous imply confusion of thought, and often suggest baseless speculations and imagined reforms of the received opinions. *Whewell, History of Scientific Ideas*, l. i. 225.

Centring. *verbal abs.* Gravitating towards a centre.

It was attested by the visible *centring* of all the old prophecies in the person of Christ, and by the completion of these prophecies since, which he himself uttered. *Bishop Atterbury*.

Centripetal. *adj.* [Lat. *centrum* = centre, *peto* = seek.] Chiefly in *Mechanics*. Having a tendency to the centre.

The direction of the force, whereby the planets revolve in their orbits, is towards their centres; and this force may be very properly called attractive, in respect of the central body, and *centripetal*, in respect of the revolving body. *Chapman*.
(For another example see *Centrifugal*.)

Centry. *s.* Same as Sentry.

The thoughtless wits shall frequent forfeits pay,
Who 'gainst the *centry's* box discharge their trea. *Gay*.

And make thee far more happy than before.

Have an army ready, say you? A most royal one. The *centurions*, and their clerks, distinctly billeted in the entertainment, and to be on foot at an hour's warning. *Shakespeare, Coriolanus*, iv. 3.

Century. *s.* [Lat. *centuria*, from *centum* = hundred.]

1. Hundred: (usually employed to specify time; as, the second *century*).

The nature of eternity is such, that, though our joys, after some *centuries* of years, may seem to have grown older, by having been enjoyed so many ages, yet will they really still continue new. *Boyle*.
And now time's whiter series is begun,
Which in soft *centuries* shall smoothly run. *Druidon*.

The lists of bishops are filled with greater numbers than one could expect; but the succession was quick in the three first *centuries*, because the bishop often ended in the martyr. *Adison*.

The decision of the judges increased the irritation of the people. A *century* earlier, irritation less serious would have produced a general rising. But discontent did not now so readily as in an earlier age take the form of rebellion. *Macaulay, History of England*, ch. i.

2. Hundred, simply.

Romances, as you may read, did divide the Romans into tribes, and the tribes into *centuries* or hundreds. *Spenser*.

When with wood leaves and weeds I have strew'd his grave,
And on it said a *century* of prayers,
Such as I can, twice over, I'll weep and sigh. *Shakespeare, Cymbeline*, iv. 2.

3. In *botanical* and *zoological* classification. See extract.

It has been already noticed that even that vague application of the idea of resemblance which gives rise to the terms of common language, introduces a subordination of classes, as man, animal, body, substance. Such a subordination appears in a more precise form when we employ this idea in a scientific manner as we do in natural history. We have then a series of divisions, each inclusive of the lower ones, which are expressed by various metaphors in different writers. Thus some have come as far as eight terms of the series, and have taken, for the most part, military names for them; as Hosts, Legions, Phalanges, *Centurias*, Cohorts, Sections, Genera, Species. But the most received series is Classes, Orders, Genera, and Species? in which, however, we often have other terms interpolated, as Sub-genera, or sections of genera. The expressions Family and Tribe are commonly appropriated to natural groups; and we speak of the Vegetable, Animal, Mineral Kingdom; but the other metaphors of Provinces, Districts, &c., which this suggests, have not been commonly used. *Whewell, History of Scientific Ideas*, p. 130.

Cephalalgic. *s.* [Gr. *κεφαλή* = head, *ἄλγος* = pain.] Remedy, or nostrum, for the headache.

Administer to each of them lenitives, aperitives, abstersives, corrosives, restitutions, palliatives, laxatives, *cephalalgics*, ikerics, apoplegmatics, acustics, as their several cases required. *Swift, Gulliver's Travels*, pt. iii. ch. vi. (Ord. M.)

Cephalic. *adj.* [Fr. *cephalique*; Gr. *κεφαλή* = head.] Appertaining to the head.

Cephalic medicines are all such as attenuate the blood, so as to make it circulate easily through the capillary vessels of the brain. *Arbuthnot, On the Nature and Choice of Aliments*.

I dressed him up with soft folded linen, dipped in a *cephalic* balsam. *Waverley, Scrymgeour*.
You are right, Branch: there is no washing the blackmour while. Mr. Stirling will never get rid of Blackmour: always taste of the Barnchie—and the poor woman, his sister, is so busy, and so notable, to

make one welcome, that I have not yet got over the fatigue of her first reception; it almost amounted to suffocation. I think the daughters are tolerable. Where's my *cephalic* snuff? *Colman and Gerrick, The Undivided Marriage*, ll. 1.

Céphalopod. *s.* [Gr. *κεφαλή* = head, *πῶς*, *πῶς* = foot.] Mollusk of the class so called; highest sub-kingdom. See last extract.

The Mollusks are the next class; and these are divided into *Céphalopoda*, *Gasteropoda*, and the like. *W. H. Wood, Natural Organism of the Marine*, p. 335.

As Professor Owen considers that the animals of the shells usually classed together as the *Nautilus* *scutula* constitute three distinct species, we have not ventured to cite any foreign synonym, since the known shells cannot be distinguished from each other, and the *cephalopod* has not hitherto been discovered in the British seas. In regard to indigestion, the claims of the present species, observed by Fleming, are doubtful. *Forbes and Hanby, British Mollusca*.

The molluscan province may thus be primarily divided into *Acephala* and *Céphala*. The *apodous* Molluscs are all aquatic, and are divided into classes according to the modifications of their integument or of their gills. . . . The *cephalopods* are divided into classes according to the modifications of the locomotive organs. The *Pteropoda* swim by two wing-like muscular expansions extended outwards from the sides of the head. The *Gasteropoda* creep by means of a muscular disc attached to a greater or less extent of the under part of the body. The *Céphalopoda* have all or part of their locomotive organs attached to the head, usually in the form of muscular arms or tentacles. In the last class only do we find, in the present series of animals, an internal skeleton, combined, in some, with a shell. *Owen, Lectures on Comparative Anatomy*, lect. xx.

Cérate. *s.* In *Surgery*. Salve, or unguent, in which wax is one of the constituents.

In one case which came under my observation a blister on the scalp was dressed for four days with this *cerate* [of cantharides]. On the fourth day the head swelled to an alarming size. *Thompson, London Dispensatory*, ndr. p. 813.

Cere. *v. a.* [Lat. *cera* = wax.] Wax. *Rare*.

You ought to pierce the skin with a needle, and strong lozenge thread *cere*, about half an inch from the edges of the lips. *Wissman, Surgery*.

Cere. *s.* In *Falconry* and *Zoology*. Naked skin, like a small cerecloth, covering the base of the bill in the hawk kind.

The horn-bird had a black *cere*. *White, Natural History of Selborne*, p. 103.

Cerealis. *adj.* and *s.* [Lat. *cerealis*, appertaining to *Ceres*, the goddess of corn.] Term applied to wheat, oats, barley, and the other grasses grown in agriculture for the sake of their seed as food: (in opposition to *maize* *grasses* on the one side, and *leguminous* and *root crops* on the other).

The chief, though not the exclusive, nutriment of the adult is wheaten flour, and the flour of the *cereals*, oats, barley, rye, and maize. . . . But though the *cereals* which are most largely employed as staple articles of food, resemble thus closely the food of the infant, and the proportion of the two leading elements in wheat approximate to the proportions in milk more nearly than in the other grains, it must not be supposed that the chemical composition of milk and of wheat presents more than this general resemblance. *Dr. Gage, On Dietetics*.

Cerealis. *adj.* Pertaining to corn. *Rare*.
The Greek word 'σπέρματα', generally expressing seeds, may signify any cibus or *cereals* grains. *Sir T. Browne, Travels*, p. 16.

Cérel. *s.* [Lat. *cerebellum*.] Hindler division of the brain. *Rare*; the common form, though Latin, being *cerebellum*.

In the head of man, the base of the brain and *cerebel*, yes, of the whole skull, is set parallel to the horizon. *De Cham*.

Cerebellar. *adj.* Belonging to the cerebellum.

If, on the other hand, we compare the *Cyclaspis* and *Phacelasma* Cartilaginous Fishes, in reference to their modes and powers of locomotion, we shall find a contrast which directly accords with that in their *cerebellar* development. *Owen, Lectures on Comparative Anatomy*, lect. viii.

Cérel. *adj.* Relating to the brain.

I refer the varieties of moral feeling, and of energy for knowledge and reflection, to those diversities of *cerebral* organization, which are indicated by, and correspond to, the difference in the shape of the skull. If the nobler attributes of man reside in the *cerebral* hemispheres; if the precognitive which lift him so much above the brutes are

satisfactorily accounted for by the superior development of those important parts: the various degrees and kinds of moral feeling and of intellectual power may be consistently explained by the numerous and obvious differences of size in the various cerebral parts, besides which there may be peculiarities of internal organization not appreciable by our means of inquiry.—*Lawrence, Lectures*, p. 500. (Ord MS).

The pseudomercia is thus a kind of 'rete mirabile' for both the cerebral and epidural circulation in the sturgeon.—*Owen, Anatomy of Vertebrates*, p. 480.

And so sent over to an hospital.

Let me not burst in ignorance, but tell,
Why thy canonized bones, hearsed in earth,
Have burst their cerements.

Dost search, and, like a needy broker, pry
The silk and gold he wears.—*Donne, Devotions*, p. 119.

With dumb pride, and a set formal face,
He moves in the dull ceremonial track,
With Jews's embroidery'd coat upon his back.

Dryden.

[The adjectives *ceremonious* and *ceremonial* are sometimes used promiscuously, though by the best and most general use they are distinguished. They come from the same noun, *ceremony*, which signifies both a form of civility and a religious rite. The epithet of the first signification is *ceremonious*, of the second *ceremonial*.—*Campbell*.]

Ceremonial. *s.* Outward form; external rite; prescriptive formality.

Césura. s. [Lat. = cutting.] In *Prosody*.

Division of a foot or measure between two words for the sake of securing an accent on a certain syllable. (This is necessary in those languages where words with an accent on the last syllable are either non-existent or rare. In such cases, whenever the metre requires any particular syllable to be accented, that syllable cannot be final; and the group of syllables, whether we call it *foot* or *measure*, to which it belongs, must be distributed over two words, i.e. must be cut.)

[The above definition is that of the present editor. In the preceding edition the entry is:

CÉSURA. 1. A figure in poetry by which a short syllable after a complete foot is made long.
2. The natural pause or rest of the voice, which, falling upon some part of a verse, divides it into two unequal parts.

Concerning these definitions it may safely be said that the first is the explanation of

a word which has no place in the English language; whilst the second gives us little more than another term for pause; and, indeed, in the fullest work we have upon the metres of our language, Dr. Guest's 'English Rhythms,' the word *cæsura* is not only avoided, but, in a long notice of the subject to which it might, according to the preceding definition, be legitimately applied, the word *pause* is used throughout. Perhaps such facts as these recommend its total elimination, rather than its retention with a changed and almost technical sense; in any treatise, however, upon metre in general, or in any special one upon the metres of the classical languages, it is useful.

As its origin is in a word meaning to cut, anything to which it applies should be divided. Now in the pentameter and heptameter *cæsuras* of the Greek iambic trimeter, the metre which gives us the best examples, the thing which is divided is a foot, i.e. the third or fourth, divided between two words.]

As the *cæsura*, or necessity for dividing certain measures between certain words, arises out of the structure of language, it only occurs in tongues where there is a notable absence of words needed on the last syllable. Consequently there is no *cæsura* in English. — Dr. R. G. Latham, *English Language*, ii. 562.

Cæsural, *adj.* Constituted by a *cæsura*, in the sense of pause: (for the sense to which the editor would limit it see above).

The *cæsural* place in heroic verse of ten syllables is for the most part at the end of the second foot. The *cæsural* pause is most natural when it coincides with the proper stops or points that distinguish the sense of the period, e.g.,

'Hail, universal lord!' he bounteous still

To give us only good.]

In English verse there are often many *cæsural* pauses in one line, e.g.,

'Him first, [him midst, [him last, [and without end.' — Milton, *Samson*, (Ord MS.)

There are two kinds of pauses that belong to the music of verse. One is the pause at the end of the line; and the other, the *cæsural* pause in the middle of it. — Blair, *Lectures*, ii. 130. (Ord MS.)

Césure, *s.* [?] In the following extract, *césure*, as a pause at the end of a line.

Older *césure*. — B. Jonson, *Underwoods*.

Cetacea, *s.* [Lat.] In *Zoology*. Class of mammals (of which the *whale* is the type) with the general character of fishes.

The *Cetacea*, in fact, have so much the external form of fishes, that ordinary observers would not hesitate to consider them as such. It is remarkable, however, that the tail in these animals is always horizontal, while in fishes it is vertical: the present group, moreover, has warm and red blood, ears with small but external openings, and mammae for the purpose of suckling their offspring. These, with many other details of their anatomy, distinctly separate them from the true fishes. . . . The natural divisions of the *Cetacea*, for the reasons above assigned, remain undetermined; but they may be artificially arranged under the denomination of, 1. Porpoises or dolphins; 2. Whales; and, 3. Luminous or sea-cows. — Stenning, *Natural History*, *Quadrupeds*, §§ 185, 186.

Cetacean, *s.* Animal of the whale kind.

One of the most remarkable animals on the coast is the dusky, a phylogingous cetacean. — Sir J. R. Tennent, *Ceylon*, ii. 7.

Cetaceous, *adj.* [Lat. *cete* = whale.] Of the whale kind.

Such fishes as have lungs or respiration, are not without the *cetacean*, as whales and *cetacean* animals. — Sir T. Browne, *Vulgar Errors*.

He hath created variety of these *cetacean* fishes, which converse chiefly in the northern seas, whose whole body being encompassed round with a capacious fat or blubber, is enabled to abide the greatest cold of the sea-water. — Ray, *Wisdom of God manifested in the Works of the Creation*.

The dolphins, like the whales and other typical *cetacean* animals, are distinguished by those singular perforations called spiracles. As they swallow,

with their prey, an immense quantity of water, some mode was necessary to enable them to get rid of it. The water passes into the nostrils by means of a peculiar disposition of the palate, and is accumulated in a sac placed at the external orifice of the external cavity of the nose, from which it is expelled with violence, by the compression of powerful muscles, through a very narrow aperture situated at the top of the head. — Stenning, *Natural History*, *Quadrupeds*, § 187.

Spence-wort, or Milk-waste, is called in Greek *ἀσπλάγχιον*, in Latin likewise *Asplenium*, and also *Scopolendria*; of German *Milch liepha*, in shops *Ceterach*. . . . Chair. *v. a.* Carry in procession on a chair:

(especially the successful candidate at a parliamentary election).

I must go through all the miseries of a canvass, must shake hands with crowds of freeholders, or freemen, must ask after their wives and children, must hire conveyances for outciders, must open almshouses, must provide mountains of beef, must set rivers of ale running, and might perhaps, after all the drudgery and all the expense, after being humiliated, hustled, pelted, and himself at the bottom of the poll, see his antagonist chaired, and sink half ruined into obscurity. *Maccanlay, History of England, ch. xix.*

The Conservative cause triumphed in the person of its Elton champion. The day the member was chaired, several men in Goring's rooms were talking over their triumph. *Disraeli the younger, Coningsby, b. v. ch. li.*

procession; procession itself.

As the day fixed for the chairing approached,

Drivers became uneasy. *Theodore Hook, Sayings and Doings of Diocesan.*

Chairman. *s.*

1. President of an assembly.

In assemblies generally one person is chosen *chairman* or moderator, to keep the several speakers to the rules of order. *Watts.*

It seems it is usual for the young gentleman of the bar to repair to the sessions, not so much for the sake of profit, as to show their parts, and learn the law of the Justices of Peace: for which purpose one of the wisest and gravest of all the justices is appointed speaker or *chairman*, as they modestly call it, and he reads them a lecture, and instructs them in the true knowledge of the law. *Fulding, Adventures of Joseph Andrews.*

2. One whose trade it is to carry a chair.

One chews him, one justles in the shade,

A rafter breaks his head, or *chairman's* pole.

Dryden.

True *chairmen* have the wooden steed,

Pragmatic with Greeks, impatient to be freed;

Those bulgy Greeks, who, as the moderns say,

Instead of paying *chairmen*, run them through.

Sieff.

Those arched awnings have afforded an agreeable covered walk, and sheltered the poor *chairmen* and their carriages from the rain, which is here almost perpetual. *Smollett, Expedition of Humphrey Clinker.*

Chaise. *s.* [*Fr.* - see Chair.] Sort of light

open two-wheeled carriage drawn by one horse.

Instead of the chariot he might have said the

chaise of government; for a chaise is driven by the person that sits in it. *Addison.*

[They] run,

They know not whither, in a chaise and one.

Pope, Imitation of Horace.

Chalcédony. *s.* [see extract.] So called

variety of quartz.

The fundamental terms of a system of nomenclature may be conveniently borrowed from casual or arbitrary circumstances. For instance, the names of plants, of minerals, and of geological strata, may be taken from the places where they occur conspicuously or in a distinct form; as *Parietaria*, *Parissia*, *Chalcédony*, *Arragonite*, *Silurian system*, *Purbeck limestone*. These names may be considered as at first supplying standards of reference; for in order to ascertain whether any rock be *Purbeck limestone*, we might compare it with the rocks in the Isle of Purbeck. But this reference to a local standard is of authority only till the place of the object in the system, and its distinctive marks, are ascertained. It would not vitiate the above names if it were found that the *Parissia* does not grow at *Parissus*; that *Chalcédony* is not found in *Chalcédony*; or even that *Arragonite* no longer occurs in

Arragon: for it is now firmly established as a mineral species. Even in geology such a reference is arbitrary, and may be superseded, or at least modified, by a more systematic determination. Alpine limestone is no longer accepted as a satisfactory designation of a rock, now that we know the limestone of the Alps to be of various ages.—*Whewell, Novum Organum renovatum*, p. 304.

Chalcographie. *adj.* Relating to Chalcography.

We shall now give the names of chalcographic artists, according to the date of their proficiency.—*Encyclopædia Britannica*, in voce.

Mr. A. Bartsch . . . enumerates thirteen classes of engraving. *Chalcography*, or engraving, properly so-called, executed with a graver. . . Three sorts of material are here spoken of: wood, metal, and stone. We consequently divide the art into three branches, *Xylography*, *Chalcography*, and *Lithography*.—*Encyclopædia Britannica*, in voce.

Chalice. *s.* [*A.S.* calic; *Fr.* calice; *Lat.* calix.]

1. Cup; bowl.

When in your motion you are hot,
And that he calls for drink, I'll have prefer'd him
A chalice for the nonce. *Shakespeare, Hamlet*, iv. 7.

2. Sacramental cup.

All the church at that time did not think emblematical figures unlawful ornaments of cups or chalices.—*Archibishop Stillingfleet*.

When Childobert the Frank had been brought into Spain by the cruelties exercised against the Catholic queen of the Goths, who was his sister, he carried away with him from the Arian churches, as St. Gregory of Tours informs us, sixty chalices, fifteen patens, twenty crosses, in which the gospels were kept, all of pure gold and ornamented with jewels.—*Neuman, Essay on the Development of Christian Doctrine*, ch. v. sect. 1.

1. Variety of carbonate of lime.

Chalk is of two sorts: the hard, dry, strong chalk, which is best for lime; and a soft, mucous chalk, which is best for limbs, because it easily dissolves with rain and frost.—*Mortimer, Husbandry*.

With chalk I first describe a circle here,
Where these ethereal spirits must appear. *Dryden*.

2. Piece used to score up tavern reckonings; hence, the reckoning itself.

But what say you, master, shall we have 'taller

and measures of behaviour in his fellow-creatures. *South*.

With these helps I might at least have chalked out
a way for others, to amend my errors in a like design.—*Dryden*.

The time falls within the compass here chalked out
by nature, very punctually.—*Woodward, Natural History*.

We should also recollect, that clodders which seem
slightly chalked out whilst our knowledge is imperfect,
are very frequently mitted with others when
fresh discoveries are made, and the intermediate
grades brought to light: so that their apparent
isolation may afterwards arise from our ignorance of
the absent links, rather than from the fact itself.—*T. F. Wallaston, On the Variation of Species*, ch. vi.

Deputy Daniel Paine has sat in the Lavender
since January; and seemed forgotten; but Foulquier
had pricked him at last. The turkey, list in hand,
is marking with chalk the outer door of to-morrow's
Furnace. Paine's outer door happened to be open,
turned back on the wall; the turkey marked it on
the side next him, and hurried on; another turkey
came, and shut it; no chalk-mark now visible, the
Furnace went without Paine. Paine's life lay not
there.—*Carlyle, French Revolution*, pt. iii. b. vi.
ch. viii.

Chalkpit. *s.* Pit, or quarry, of chalk.

(For example see extract under Chalkcutter.)

the skin.—*Watson, Lectures on the Principles and
Practice of Physic*, lect. lxxxi.

default. *Sir M. Hale*.

4. Claim as due.

That divine order, whereby the pre-eminence of
chiefest acceptance is by the best things worthily

I will now challenge you of your promise, to give
me certain rules as to the principles of blazony.—
Peacham, Compleat Gentleman.

[To challenge one to fight is to call him to decide on the
matter by combat. The origin is the forensic Latin
calumniare to institute an action, to go to law. (Du-
cenne.) So from dominus, domini, domini, English,
dugeon; from somnus, French, souter. Provençal,
calonia; dispute; calumpniare, contestation, dilige-
ntly; calonia, to dispute, refuse. The sacrum ac-
tum de calumnia was an oath on the part of the
person bringing an action of the justice of his
ground of action, and as this was the beginning of
the suit it is probably from thence that calumpniari

in the sense of bringing an action arose. 'Can hom
ven al plaic et fa sacramen de calumpniar.' 'Sacramen-
to de calumpnia o de veritat per la una part e per
l'altra.'—*Wedgwood, Dictionary of English Etymology*.]

Of every wind that blows.

Shakespeare, Winter's Tale, iv. 3.

The only man, of all that *chance* could bring
To meet my arms, was worth the conquering.

Dryden.

Chance is but a mere name, and really think in itself; a conception of our minds, and only a com-

pendious way of speaking, whereby we would express, that such effects as are commonly attributed to *chance*, were verily produced by their true and proper causes, but without their design to produce them.—*Bentley*.

These things are commonly not observed, but left to take their *chance*. *Bacon, Essays*.

Lay for the next *chance-comer*.

Dryden.

I have found by experience that the country is not a place for a person of my temper, who does not love Jollity, and what they call good neighbourhood. A man that is out of humour when an unexpected guest breaks in upon him, and does not care for sacrificing an afternoon to every *chance-comer*, that will be the master of his own time, and the pursuer of his own inclinations, makes but a very unsociable figure in this kind of life. I shall therefore retire into town, if I may make use of that phrase, and get into the crowd again as fast as I can, in order to be alone.—*Ashmole, Spectator*, no. 131. (Orl M.)

Chance-medley. *s.* [see last extract.]

1. Casual affray; unintentional homicide in self-defence on a sudden quarrel, or in commission of an unlawful act.

But this name is greatly advanced, and not only in other kingdoms but in this, is given to him that is the chief judge in causes of property; for the *Chancellor* hath power to moderate and temper the written law, and subjecteth himself only to the law of nature and conscience.—*Cicero*.

Turn out, you rogue, how like a beast you lie:
Go, huckle to the law: Is this an hour
To stretch your limbs? you'll ne'er be *Chancellor*.

Used *adjectively*, or as the *first element* in a compound.

His serenity, his modesty, his self-command, prof even against the most sudden surprise of passion, his self-respect, which forced the proudest grandees of the kind to respect him, his urbanity, which won the hearts of the youngest lawyers of the *Chancery Bar*, gained for him many private friends and admirers among the most respectable members of the opposition.—*Macaulay, History of England*, ch. xiv.

The earlier meaning, however, of the word was the covering of the part in question, or the stall on which, in fully caparisoned horses, the barb was placed.

Extended by several zoologists to the corresponding part in other animals, it is in a fair way of becoming a definite anatomical term under the form *chaffron*. In the following extract it applies to an animal akin to the antelopes on one side, and to the oxen on the other, the Catoblepas Gnu.

The head is large and square, with horns in both sexes; . . . the muzzle is very broad; the nostrils bovine, and provided internally with a triangular valve which opens and closes at pleasure. There are glands on the cheek, a mane on the neck, and a considerable beard upon the throat; the dewlap is small; there is a ridge of hair on the *chaffron*, and bristles round the eyes and upon the lips. The body and tail are those of a horse, and the legs are like those of a stag. A more singular compound of characters cannot well be exhibited; and they conspire to produce an animal of a most extraordinary aspect.—*Bewickson, Natural History, Quadrupeds*, § 285.

[*Chapel*. Commonly derived from *capella*, the cape or little cloak of St. Martin, which was preserved in the palace of the kings of the Franks, and used as the most binding relic on which an oath could be taken. . . . Hence it is supposed the name of *capella* was given to the apartment of the palace in which the relics of the saints were kept, and thence extended to similar repositories where priests were commonly appointed to celebrate divine services. . . . But we have no occasion to resort to so hypothetical a derivation. The canopy or covering of an altar where mass was celebrated was called *capella*, a hood. Medieval Latin, *capellare*, to cover, decken, be-decken; *capella*, ein hüneltz, schümel (eucharistic, &c.); the canopy over the sacred elements: eine kleine Kirche. And it can hardly be doubted that the name of the canopy was extended to the recess in a church in which an altar was placed, forming the *capella* or *chapel* of the saint to whom the altar was dedicated.—*Wedgeood, Dictionary of English Etymology*.]

[Châtelain—cattle. French, chatel, Old French, chapel, a piece of moveable property, from Latin, capitulum, whence capite, capitulum, the principal sum in a loan, as distinguished from the interest due upon it. 'Semper renovamur carnis et usura que caretis vertebatur in cattulium.' (Cronica Jocelini. Camden

(Society.) Then, in the same way as we speak at the present day of a man of large capital for a man of large possessions, *catallum* came to be used in the sense of goods in general, with the exception of land, and was specially applied to cattle as the principal wealth of the country in an early stage of society.

'Juxta facultates suas et juxta catalla sua.' (Laws of Edward the Confessor.) 'Cum decimis omnium terrarum sine honorum aliorum sive catallorum.' (Ingulphus.)

'Rustici curtilium debet esse clausum iustate simul et hinc.' Sic discimus sit et inferat aliquis vicium sui capite per sumum apertum.' (Brompton in Duc.)

It should be observed that there is the same double meaning in Anglo-Saxon, *ceap*, goods, cattle, which is the word in the laws of the translated *catalla* in the foregoing passage; and this may perhaps be the reason why the Latin equivalent *capite* was applied to heads of the farm with us, while it never acquired that meaning in France.—*Waldwood, Dictionary of English Etymology.*

(In the text of Yarrell's British Birds the word *chatterer* is not to be found, appearing only in the list of synonyms, and the same is the case in Bewick. Chawme. *s.* [word for word, *chasm*.—such is Richardson's view; and, if right, it is likely that the spelling *chawme* misled some early writer, who took it for what it really looks like, a word of Anglo-Norman origin.] Fissure; opening.

There be lands also that put forth after another manner, and all at once show on a solaine in some sea; as if nature crept quittance with herself, and made even paying one for another; namely by giving againe that in one place which those *chawmes* and gaping gulfs took away in another.—*Holland, Translation of Pliny*, ii. 86.

The original for both *chawmes* and gaping gulfs is *hiatus*.

[The modern sense of low in price is an ellipse for good *chawp*, equivalent to French, *bon marché*. . . . Itro shows satisfactorily that the modern sense of buying is not the original force of the word, which is used in the sense of bargaining, agreeing upon, exchanging, giving or taking in exchange, and hence either buying or selling. 'Hvert kaup skulu vid thes theim heitum marnæ.' What shall we then give in exchange, what return shall we make to the holy man. (Psal. v. 12.) 'Ek villid kaup skipting vid yekur brædur.' I will exchange ships with you two brothers. 'Akpa jordi jordi,' to exchange farm for farm. Thus we are brought to the notion of exchanging, expressed by the colloquial English, *chawp*; to *chawp* and *change*, to swap goods.—*Waldwood, Dictionary of English Etymology*.]

yardland home. *Tennyson, Maude, l. 12.*

In former times the banker gave his 'promise to
pay' in the form of notes, which practice continued
to be used by London bankers till about 1772, when
they changed the form, and adopted the plan of
giving their promises to pay in the form of figures

with the pawn you lose the game.'—'I see your
meaning,' she answered; 'Lord Barnley is but a
pawn; but, unless I look to it, I shall be *check-
mated*.'—*Fronds, History of England, Reign of
Elizabeth, ch. vii.*

Ballad. (Nares by H. and W.)

Checkers. *s.* [Generally, probably always, in the plural; inasmuch as at least two areas of different colours are implied by the term.]

The word is a well-known name as the sign of a public-house; once more frequent than now, and denoted by a checkered board, sometimes hanging out as a sign, sometimes painted on the doorpost or shutters.

One derivation is supplied by the extract from Brand which deduces it from the table itself. If, however, we lay much stress on the opportunity afforded for changing money, it may be more immediately connected with Exchequer.

In any case it is a proper, rather than a common, name. Derived from Exchequer, it would be a proper name derived from a proper name. This origin being in the present case doubtful, and the use of the *qu* in spelling being limited to those words from which it is considered impracticable to eject it (see Chequer), the entry stands as the reader finds it here; and it does the same in Checkroll, where the likelihood of a derivation from Exchequer is greater.

The reason why the use of *qu* is limited, rather than extended, is connected with the facts indicated in the notices of Aleaid, Cee, and Kuy, viz. the practical inconveniences, as well as the theoretical inaccuracies, which arise from the principle improperly introduced into English from languages derived from the Latin, of avoiding the use of *k* wherever, by any possible orthographical expedient based upon the application of *c* or *q*, it can be dispensed with.

In Check, &c., this adoption of *k* is unavoidable, on account of words like Checkring, Checker, &c. To write *chec-er* would render the word liable to be sounded *ches-er*. When this is the case, the only alternative is that between spelling Check and Cheque.

That the former is prevailing over the latter in every language where *k* exists at all as a letter is apparent; where *k*, however, as in the French, is not admitted, there is no alternative. As an instance of the extent to which the orthographical expedients adopted for the sake of supporting this eschewal of *k*, on the strength of its being extraneous to the later Latin alphabet, have defeated their own end, the Spanish spelling of the word Chimera may serve. It is spelt *Quimera*. This is because, whilst the sound of the *k* must be retained, *ci* would run the chance of being sounded something between *tsre* and *thee*, and *chi* like *chee* in cheer.

For a like improper use of *qu*, see Choir, Chorister, Quire, and Quirister. It is submitted that a principle which leads to instances like these should be limited rather than extended.]

Dece consisting of alternate black and white squares used as a tavern sign.

The *Chequers*, at this time a common sign of a public house, was originally intended, I should suppose, for a kind of draught-board, called tables, and showed that there that game might be played.—*Brand, Observations on Popular Antiquities.* Story! Checkerwork. *s.* Work consisting in a pattern composed of squares varied alternately in colours or material.

Nets of checker-work and wreaths of chain-work for the claspers which were upon the top of the pillars. *1 Kings, vii. 17.*

In that variety which God hath chosen to set forth his noblest creatures, which are after his own image, even mankind, in a kind of checker-work of some handsome and others und handsome, some pallid and others ruddy, every one, I think, ought to content themselves with that colour and complexion, as well as feature, which God hath given them; not only in order to their particular subsisting, but as to the general symmetry of his works.—*Jeremy Taylor, Artificial Happiness, p. 35.*

There is in divine dispensations a kind of checker-work of black and white days taking place by turns.—*Spencer, Discourse concerning Providence*, p. 300. How strange a checker-work of Providence is the life of man! and by what secret different springs are the affections hurried about, as different circumstances present!—*De Foe, Life and Adventures of Robinson Crusoe.*

Checkless. *adj.* Uncontrolled; violent.

The hollow murmur of the checkless winds
Shall groan again. *Marton, The Molecontent.*

Checkroll. *s.* [see Checkers.] Roll, or book, containing the names of such as are attendants on, and in pay of, great personages, as their household servants.

Not daring to extend this law further than to the king's servants in checkroll, lest it should have been too harsh to the gentlemen of the kingdom.—*Bacon, History of the Reign of Henry VII.*

[A] the forms in Check are treated by etymologists as etymological congeners, all being equally derivatives from the

word signifying check in chess. For an idea so common as that suggested by the word check=stop, a term derived from a sedentary game is scarcely what we expect a priori. This, however, is all that can be said against the etymology.

The game, then, gives name to two series of words; one taken from the play itself, and signifying stoppage, &c.; the other from the board, and signifying alternation of differently coloured squares.

As the immediate origin, however, of the English word is from the French, the question under notice is one that touches the French rather than the English lexicographer.]

(Caseous, in sentences connected with cheese, either as an element of nutrition, or as a term suggestive of the likeness to curd, would now be the commoner word; at least in biological works, where the adjective is often used. Cheesy, however, is used where purity of English is aimed at).

Acids mixed with them precipitate a topaceous

not, On the Nature and Choice of Aliments.

Cheoptera. s. See Chiroptera.

Chelonia. s. pl. Members of the Chelonian group.

And draws the aromatic souls of flowers.

Pope.

Chémic. s. Chemist. *Obsolete*, or perhaps originally used in disparagement.

Galen mentions in his time but three sorts of physicians: we have now a fourth, that goes under the name of *chémics*, hermuleks, or Paracelsians.—*Blackwell, Apology, p. 244.*

It is termed *chémic*, sirrah; it seems so by his talk. Here's old turning; these *chémics*, seeking to turn lead into gold, turn away all their own silver.

Brewer, Lingua, iv. 1.

The ancients observing in that material a kind of metallical nature, seem to have resolved it into no-
bler use; an art now utterly lost, or perchance
kept up by a few *chémics*.—*Sir H. Wallon.*

Chémical. s. Drug; chemical preparation. See Drug.

Chémical. adj. Same as Chémic, and now the commoner term.

The medicines are ranged in boxes, according to their nature, whether *chémical* or Galenic preparations.—*Watts.*

Most of the substances belonging to our globe are constantly undergoing alterations in sensible quantities; and one variety of matter becomes, as it were, transmitted into another. The object of chemical

philosophy is to ascertain the causes of all such phenomena, whether natural or artificial, and to discover the laws by which they are governed.—*Sir H. Davy.*

In chemical processes, opposites tend to unite, and to neutralize each other by their union. Thus an acid or an alkali combine with violence, and form a compound, a neutral salt, which is neither acid nor alkaline. This conception of contrariety and mutual neutralization, involves the Idea of Polarity. In the conception as entertained by the earlier chemists, the idea enters very obscurely; but in the attempts which have more recently been made to connect this relation (of acid and base) with other relations, the chemical elements have been conceived as composed of particles which possess poles; like poles repelling, and unlike attracting each other. . . . Mr. Faraday, who has been led by his researches to a conviction of the polar nature of the forces of chemical affinity, has expressed their character in a more general manner, and without any of the machinery of particles indwelt with poles. According to his view, chemical synthesis and analysis must always be conceived as taking place in virtue of equal and opposite forces, by which particles are united or separated.—*Whewell, History of Scientific Ideas, b. v. ch. i. § 7.*

Chemically. adverb. In a chemical manner.

Hugravon specifies a lamp to be made of man's blood, lucerna vite et mortis ludez, so he terms it; which *chemically* prepared 40 days, and afterward kept in a glass, shall shew all the accidents of his life.—*Burton, Anatomy of Melancholy, p. 281.*

He brews his tears that studies to lament.

Verse *chemically* weeps.

Cleveland, Elegy on Archbishop Laud.
The close connexion between the Chemical Affinity and the Crystalline Attraction of elements cannot be overlooked. Bodies never crystallize but when their elements combine *chemically*; and solid bodies which combine, when they do it most completely and exactly, also crystallize. . . . Both chemical and crystalline forces are polar, as we stated in the last chapter, but the polarity in the two cases is of a different kind. The polarity of chemical forces is then put in the most distinct form, when it is identified with electrical polarity; the polarity of the particles of crystals has reference to their geometrical form. *Hewell, History of Scientific Ideas, b. v. ch. ii. § 9.*

Chemist. s. One who practises Chemistry; (in the infancy of Chemistry applied to alchemists; and, even when the science was in a more advanced stage, used as a term of disparagement).

The starving *chemist*, in his golden views
Supremely blest. *Pope, Essay on Man.*
(See also last extract under Chemical, adj.)

Chemistical. adj. Chemical. *Obsolete.*

Paracelsus, and his *chemistical* followers, are so many Prometheus, will fetch fire from heaven, will cure all manner of diseases, &c.—*Burton, Anatomy of Melancholy, p. 377.*

Chemistry. s. [for spelling and derivation, see the extracts and remarks at the end of them.] Scientific study of the constitution of substances in respect to their elements, and of the forces by which they are held together.

Chymistry [is] derived by some from *χυμος*, juice, or *χυμα*, to melt; by others from an oriental word, *keme*, black. According to the supposed etymology, it is written with *y* or *e*. Some deduce it from the name of a person eminently skilled in the science, whose name, however, is written both *Χημης* and *Χημης*. Others consider *Chém*, the Coptic name of Egypt, which was the cradle of this science, as the original.—*Johnson, Dictionary, in voce.*

It is derived originally from *chemia*, and that word from *Chem*. . . . The Egyptians were deeply skilled in astronomy, and geometry; also in *chymistry*, and physics. —*Bryant, Ancient Mythology, iii. 209.*

[The extract from Davy under Chemical, which, as an addition of Todd's, represents a newer orthography than that of Johnson himself, is the only one in which the word is spelt with an *e*, though *Chem*y in the extract from Cheyne placed under that word gives an approximation to the present spelling.] In respect to this it is scarcely necessary to say that *e* is all but universal.

The principle that condemns *y* is stated under Alchemy. To apply this, it is not necessary to suppose that the derivation from the Greek *χημος* has actually been disproved. It is sufficient for it to be doubt-

ful; the rule being that *y* is only to be used when it is *certain* that it represents a Greek upsilon. How far the origin of the word was unknown in Johnson's time may be seen from the extracts. Nor is it absolutely beyond the range of discussion even at the present time; the most that can be said in favour of its derivation from the native name of Egypt being that the early history of the science favours it.

The pronunciation follows, for the most part, the old rather than the new spelling; but, as the word is one which belongs chiefly to the reading classes, the habit of sounding the *e*, which has certainly set in, may eventually prevail.

Chemistry, as a science, has to a great extent a language of its own; formed artificially, and upon certain principles; definite, though liable to modification. The fact of the following extracts (which also exhibit the spelling with *e*) being illustrative of these excuses their length.]

The language of Chemistry was already, as we have seen, tending to assume a systematic character, even under the reign of the phlogiston theory. . . . the new nomenclature was constructed upon a principle hitherto hardly applied in science, but eminently commodious and fertile; namely, the principle of indicating a modification of relations of elements, by a change in the termination of the word. Thus the new chemical school spoke of sulphuric and sulphurous acids; of sulphate and sulphite of bases; and of sulphurets of metals; and in like manner, of phosphoric and phosphorous acids, of phosphates, phosphites, phosphurets. In this manner a nomenclature was produced, in which the very name of a substance indicated at once its constitution and place in the system. The introduction of this chemical language can never cease to be considered one of the most important steps ever made in the improvement of technical terms; and as a signal instance of the advantages which may result from artifices apparently trivial, if employed in a manner conformable to the laws of phenomena, and systematically pursued.—*Hewell, Vocabulum Organum renovatum, li. iv. aph. ii. § 3.*

In Chemistry, new substances have of late had names assigned them from Greek roots, as *Indine*, from its violet colour, *Chlorine* from its green colour. In like manner fluorine has by the French chemists been called *Phthor*, from its destructive properties. So the new metals, *Chrysine*, *Rhodine*, *Iridine*, *Osium*, had names of Greek derivation descriptive of their properties. Some such terms, however, were borrowed from localities, as *Strontia*, *Yttria*, the names of new earths. Others have a mixed origin, as *Pyragallie*, *Pyraeolic*, and *Pyraligneous* Spirit. In some cases the derivation has been extravagantly enigmatical. Thus in the process for making Pyragallie Acid, a certain substance is left behind, from which M. Berzelius extracted an acid which he called *Ellagic* Acid, framing the root of the name by reading the word *Galle* backwards.—*Ibid. b. iv. aph. xx. § 7.*

Chémy. s. Chemistry. *Obsolete.*

It is past all doubt in philosophy, and in philosophical *chém*y, that animal substances of most kinds possess, in a much greater proportion, salts and oils than vegetables.—*Cheyne, Philosophical Principles of Natural Religion, disc. 2.* (Ord MS.)

Chéquer. s. Exchequer.

Triumbe that the swain floods render
Into her *chéquer*.

W. Brown, Britannia's Pastorals.

A reference to the extracts under Checkerwork will show that the spelling of some at least of the derivatives of *Check* is uncertain. The present edition goes on the principle of limiting the use of the form in *q*. The word *exchequer*, however, is one from which few would venture to exclude it; indeed it is a proper, rather than a common, name. To this, then, and its undoubted abbreviations, the present spelling is restricted.

Chequer-chamber. s. Exchequer chamber.

It was resolved by all the judges in the *Chequer-chamber* that the possession of the crown takes away all defects; yet for honour's sake all records of the attainder were taken off the file.—*Baker, Chronicle, A.D. 1485.* (Rich.)

Magistrates have always thought themselves concerned to *chérish* religion, and to maintain in the minds of men the belief of God and another life.—*Archbishop Tillotson.*

But old god Saturn, which doth all devour,
Doth *chérish* her, and still augments her might.

Shore's wife hath a pretty *cherry* lip,
A *cherry* lip, a passing pleasing lip.

Shakespeare, Richard III. i. 1.

Cherry-bounce. s. Cherry-brandy under a false name, coined to avoid the notion of its being a spirit, and, as such, liable to a duty for its sale.

Plethora—yea, of *cherry-bounce* quantum suff.—and old Oporto, a couple of magnams.—[that's my physick] A short life and a merry one, ha! ha! Ugh! ugh!—*Morton, Secrets worth knowing, li. 1.*

With a play on the word; *bounce* = exaggeration.

He rang the bell, and ordered the servant—first giving him a key and a caution—to bring forth sundry bottles of the bonsted beverage; for let it always be remembered, that Hull's cases of what might be thought *bounce* were all as genuine as this of the *cherry-bounce*—he had all the things he talked of.—*Theodore Hook, Gilbert Gurney, vol. ii. ch. xi.*

Cherry-brandy. s. [Two words rather than a compound.] Brandy flavoured with (nucello) cherries.

Shakespeare, Comedy of Errors, iv. 3. A little spark of life, which, in its first appearance, might be inclosed in the hollow of a cherry stone.—*Sir M. Hale.*

Cherry-tree. *s.* Tree (*Prunus Cerasus*) bearing cherries.

This hero [Lucullus], who conquered the East, has left his more extended celebrity to the transplantation of cherries (which he first brought into Europe) and the nomenclature of some very good dishes; and I am not sure that (harring indisposition) he has not done more service to mankind by his cookery than by his conquests. A cherry-tree may weigh against a bloody laurel; besides, he has contrived to earn celebrity from both.—*Byron, Don Juan*, xv. note 4.

Chersonese. *s.* [Gr. *χερσόνησος* (from *χίρα*, *χίρα*)—land-island.] Block of land projecting into the sea, like Attica, the Thracian Chersonese, and other similar areas, too large for Capes and scarcely narrow enough at the neck to be called Peninsulas.

Restricted to such, and signifying a Peninsula without an Isthmus, the word may usefully be admitted into the language of modern geography. Holstein, Schleswig, and Jutland are often called the Cimbric Chersonese; and that, as far as the latter term goes, both accurately and conveniently.

The sea on circles there that it becomes a Chersonese. *Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 35.

From India and the Golden Chersonese. *Milton, Paradise Regained*, iv. 74.

Chert. *s.* [?] Kind of flint differing from the purer sorts in being less crystalline, and having calcareous elements.

Flint is most commonly found in form of nodules; but 'tis sometimes found in thin strata, when 'tis called chert.—*Woodward.*

Resistance, it will be remembered, have to resist not only friction but pressure, and they require, therefore, to be hard and tough. For this reason, chert, though not harder, being tougher than flint, is a far better road material.—*Ansted, Geology*, ii. 448.

Cherty. *adj.* Flinty.

The clay is found near the town, over the cherty stratum.—*Pennant.*

Chérab. *s.* [Hebrew, in which language the plural is *cherubim*; *cherubs* being the English form, and *cherubims* an incorrect one arising out of a mixture of the two.] Being belonging to the Hebrew angelology, of doubtful form, but represented by sculptors under that of the head of a child supported by the wings of a bird. See last extract.

The roof o' the chamber With golden cherubims is fr-tied. *Shakespeare, Cymbeline*, ii. 4.

Byron, Vision of Judgment. Moses has left us in the dark as to the form of these cherubims. The Jews suppose them to have been in the shape of young naked men, covered for the sake of decency with some of their wings. . . . But it is certain that the prophet Ezekiel represents them quite otherwise, and speaks of the face of a cherub as synonymous with that of an ox or calf; and in the Revelation they are called *seraphim*.—*Hook, Church Dictionary*, in voce.

Chérabie. *adj.* Relating to a cherub.

Thy words Attentive, and with more delighted ear, Divine instructor! I have heard, that when Cherubick songs by night from neighboring hills Aerial music send. *Milton, Paradise Lost*, v. 544. And on the east side of the garden place Cherubick watch. *Id.*, xl. 119.

Chérabical. *adj.* Same as Cherubic.

Why did you not call to mind the chérabical angel, which, in the form of a crucifix, spoke to St. Francis?—*Sheldon, Miracles of Antichrist*, p. 102.

Cherubin. *adj.* Cherubine (supposing such a word to have been formed on the principle of *divine*); of the character of a cherub; angelical: (or in the extract, if the accent be taken as a test, the Cherubin of the following entry in combination with *look*).

This fell whore of thine Hath in her more destruction than thy sword, For all her cherubin look. *Shakespeare, Timon of Athens*, iv. 3.

Chérubin. *s.* [probably formed out of *cherubin* for the sake of the rhyme.] Cherub.

Chérvil. *s.* [see extract.] Name given to certain umbelliferous plants of the genera *Anthriscus* and *Cherophyllum*; the *Anthriscus Cerefolium* (another form of the word), cultivated for salads and soups, being one of them. See Cicely.

Cherwill is commonly called in Latin *cerefolium*, and, as divers affirm, *cherophyllum* with a *o* in the second syllable. *Columella* nameth it *cherophyllum*, and it is thought to be so called because it delighteth to grow with many leaves, or rather in that it causeth joy and gladness. In High Dutch, *Korfeldkraut*; in Low Dutch, *Kornell*; in Italian, *Cerefolio*; in French, *du Cerueil*; in English, *Cherwill* and *Cherwill*.—*Gerarde, Herbal*, p. 1639: ed. 1633.

Chésible. *s.* [N.F. *casuble*, *chasuble*; L.Lat. *casubula*, *castubula*, *casibula*, the last being apparently a commouder form in England than on the Continent. Though both *Casuble* and *Chasuble* are to be found, and though the derivation points to them as the more correct forms, the one in current English seems to be that here given.] Kind of cope; short vestment without sleeves worn by the priest at mass.

Hee casula, a cherygyl.—*Promptorium Parvolorum.*

Manyfold kinds of ornaments, asopes, carpocasses, chesbles, tunicles, stoles, &c.—*Bale, Discourse on the Revelations*, pt. ii. k. v. h.

Casula, the chesible, was a garment worn by the priest next under the cope; and is said to have been so called being a kind of cottage (as it were) or little house covering him.—*Burns, Ecclesiastical Lat.* *Casula* (to which a reference is made from [the title]).

The *Tronsa Subterranea* of Bodini gives us designs of the first christians of both sexes, entirely covered with the chesible, so like a sack that this vast robe turned up over their shoulders when they wished to lift their arms. This gave occasion to the hollows in the side made in the Roman chesibles. It was a kind of cope, open at the sides, worn at mass. The bottom in the priest was round, in the deacon and subdeacon square. It was also called *Planeta*, and fastened with a buckle.—*Flabroke, Encyclopædia of Antiquities* (Costumary), *Planeta*.

Chésil. *s.* [German, *kiesel*—flint.] A proper, rather than a common, name; as in

the *Chesil* Bank, i. e. bank of shingle, of the Isle of Portland. See *Chisson*.

Chess. *s.* [check.] Game of skill so called. See also *Checkmate*.

This game the Persian magi did invent, The force of Eastern wisdom to express; From thence to busy Europeans sent, And styl'd by modern Lombards pensive chess. *Sir J. Davies.*

So have I seen a king on chess, (His rooks and knights withdrawn, His queen and bishops in distress) Shifting about, grow less and less, With here and there a pawn. *Dryden.*

Chessboard. *s.* Board or table on which the game of chess is played.

And cards are dealt, and chessboards brought, To soothe the pain of coward thought. *Prior.*

Chessman. *s.* Piece used in the game of chess. See extract.

A company of chessmen, standing on the same squares of the chessboard where we left them: we say, they are all in the same place, or unmoved.—*Lewis.*

A title or suit of chessmen consists of six orders, which in the old Oriental game were named:—1. *Scarch*, the king; 2. *Pierz*, the general; 3. *Phil*, the elephant; 4. *Aspiensar*, the horseman or cavalier; 5. *Ruch*, the camel; 6. *Beidol* or *Beidak*, the footman or infantry. In this suit there was no queen, as the introduction of war would have been contrary to the Oriental ideas of propriety; and long after the introduction of chess into Europe, the second piece, now called the Queen, retained its Eastern name under the name of *Pierce*, *Fyrche*, or *Pierge*, even after it had acquired a feminine character. *Pierce* at length became confounded with the French *Vierge*, a maid; and finally the piece is called *Dame*, a lady, and so becomes thoroughly European both in name and character. . . . *Phil*, the elephant, is now the *Pol* or *Pon* of the French, and the *Bishop* of the English; *Aspiensar*, the horseman, is . . . the English knight; *Ruch*, the camel, is the . . . *Book* or *Castle*; and the *Beidol* or *Beidak*, the footman, are now the French *Pions* and the English *Pawns*. *Chatto, Facts and Speculations on the Origin and History of Playing Cards*, ch. i.

Chéssner. *s.* Chessplayer. Rare.

Yourer's my game, which, like a pœtic chessner, I must not seem to see. *Middleton, Game of Chess*, act iv. (Nares by H. & V.)

Chéssom. ? *s.* Mellow earth.

Thus rendered by Johnson; but the text leaves us free to treat it as an adjective: it is probably a provincial word meaning *loose*, or *friable*. The editor connects this with the local term *chiselly*, i. e. abounding in small stones; the substantive being *chésil*, as in the *Chésil* Bank of the Isle of Portland, and the German *kiesel*—flint. The objections to this are, (1) the fact of the loss of the *l* being unexplained; and (2) that of *chiselly* being scarcely a complimentary term as applied to soil.

The tender chessom and mellow earth is the best, being mere mould, between the two extremes of clay and sand; especially if it be not loamy and binding.—*Bacon, Natural and Experimental History*.

Chéssplayer. *s.* Player at chess.

Thus like a skilful chessplayer, he draws out his men, and makes his pawns of use to his greater persons.—*Dryden.*

Chest. *s.* [A.S. *cyst*; Lat. *cista*.]

1. Box of wood or other material, in which things are laid up.

He is now dead, and nailed in his chest. *Chaucer, Prologue to the Clerk's Tale*.

4. Sometimes used instead of *Cuission*.

Chested. *adj.* Pertaining to the chest.

The following extract is probably to be read *broad-shouldered* and *-cheated*, i.e. with *broad* common to the two adjectives: otherwise the form (see preface) is rare.

Jeffery (Hudson) was born in the parish of Okeham, in this county, where his father was a very proper man, broad shouldered and *cheated*, though his son never arrived at a full ell in stature.—*Faller, Worthies of England, Rutlandshire*, (Rich.)

Chestnut. *s.* [Fr. *chastaigne*; Lat. *castanea*.]—the sound and spelling required by the etymology is *chest-nut*, with two *ns*; in reality, however, the *t*, as well as the first *n*, is either lost or being lost, the common sound being *ches-nut*, in which way it is sometimes spelt.] Fruit of the chestnut tree; colour resembling that of a chestnut.

His short upper lip indicated a good breed; and his *chestnut* curls clustered over his open brow, while his shirt-collar thrown over his shoulders was unrestrained by lankkerchief or ribbon.—*Disraeli the younger, Coningsby*, b. i. ch. i.

Chétah. *s.* [?] Feline animal so called, akin to the leopard.

Leopards are the only formidable members of the feline race in Ceylon. . . . By Europeans they are commonly called *chétahs*, but the true *chétah* or hunting-leopard does not exist in Ceylon.—*Sir E. Tennant, Ceylon*, pt. ii. ch. i.

Chéveril. *s.* [N.Fr. *cheverel*.] Kid; kid-leather. *Obsolete*; superseded by Kid.

O, here's a wit of *cheveril*, that stretches from an inch narrow to an ell broad.—*Shakespeare, Romeo and Juliet*, ii. 4.

Used adjectively; and meaning elastic like a kid glove.

Neither the captains nor soldiers can stand or prevail. And no interval, for their armour is of *cheveril* leather; and the nature of *cheveril* leather is, that if a man take it by the sides, and pull it in breadth, he may make a little point as broad as both his hands; if he take it by the ends, and pull it in length, he may make it as small as a thread. Most men now a dayes have *cheveril* consciences! if the matter touch their own profit or pleasure, they make their consciences wide enough, and large enough; if it touch another man's profit, they make them as small as a thread.—*Bishop of Chichester, Sermon at Paul's Cross*, v. lvi: 1576.

A sentence is but a *cheveril* glove to a good wit: how quickly the wrong side may be turned outward.—*Shakespeare, Twelfth Night*, iii. 1.

If you might please to stretch it.

Chévron. *s.* [Fr.—see last extract.] In *Heraldry*. One of the honourable ordinaries: (it represents two rafters of a house, set up as they ought to stand).

The musquers were placed in a great concave shell, like mother of pearl: the top thereof was stuck with a *chévron* of lights, which, indented to the proportion of the shell, struck a glorious beam upon them, as they were seated one above another.—*B. Jonson, Masques at Court*.

[*Chévron*. The representation of two rafters in heraldry. French, *chevron*. Provençal, *cabiron*, *cabiron*, Spanish, *cabrio*, a rafter; *cabrial*, a beam, *cabrinnes*, widders of wood to support the breech of a cannon. Greek, *καρπιδος*, *καρπιδος* the *στυγες*, *στυγες*; *καρπιδος*, *καρπιδος*. Wallichian, *castra*, *castrum*, beam, rafter. The word seems unquestionably connected with the name of the goat, and as French *cabrer* is to rear like a goat, the term may be applied to rafters reared against each other like butting goats. The Hungarian rafter is *szarvas*, literally horn-wood. On the other hand, German *bock* is generally applied to a piece of wood on which anything rests, a trestle for sawing, carpenter's bench, does in a fire-place, painter's ewel.—*Wedgwood, Dictionary of English Etymology*.]

Chews verdurous pasture.

A. Phillips.
Chew the cud. Ruminant. See Cud. Hence in a metaphorical sense (both with and without the substantive), think, meditate.

I believe, however, that I shall for some time continue to *chew the cud* of reflection upon many observations which this original discharged.—*Smollett, Expedition of Humphry Clinker*.

Some books are to be tasted, others to be swallowed, and some few to be *chewed* and digested: that is, some books are to be read only in parts; others to be read, but not curiously; and some few to be read wholly, with attention.—*Bacon*.

Chéwing. *verbal abs.* Act of one who chews; process by which anything is chewed.

By *chewing*, solid aliment is divided into small parts: in a human body, there is no other instrument to perform this action but the teeth. By the action of *chewing*, the spittle and mucus are squeezed from the glands, and mixed with the aliment; which action, if it be long continued, will turn the aliment into a sort of chyle.—*Arbuthnot, On the Nature and Choice of Aliments*.

Chéroséuro. *s.* [Italian, *chiaro* = bright,

osuro = obscure, or dark.—The thing being common to the painting of all countries, the word is indispensable: and, purely Italian as it is, its form is justifiable, except in the eyes of those who would supersede it by *light-and-shade*, or some similar combination. By spelling it *clare-obscure*, and *clair-obscure*, nothing is gained: *clare* and *clair* being as little English as *chiaro*.] In the *Fine Arts*. Distribution of the lighter and darker shades over a painting or engraving.

The engravers, from the earliest period of their art till the time of Rubens, never attempted more than to give to each object in their engravings its proper lights and shadows, leaving to painting alone the privilege of producing the effect of *chiaroscuro* by the opposition of objects of dark local colour to light ones. Thus the effects of *chiaroscuro*, so forcible in the picture, were weak and incomplete in the print. . . . But engravers at present . . . are enabled to make the effect of their prints, so far as relates to *chiaroscuro*, as rich and powerful as it is in the pictures they copy. . . . *Rees, Cyclopaedia, Chiaroscuro*. In another part of his book he attempts to determine the honour of having first practised the art of engraving in *chiaroscuro*; although Italy, on the authority of Vasari, had long laid claim to that invention.—*Otley, History of Engraving*, ch. i.

Chéisma. *s.* [Gr.] In *Anatomy*. Central body of nervous matter formed by the junction and decussation of the optic nerves.

In no other instance is a similar junction between two corresponding nerves of opposite sides known to occur. Such an anomaly affords strong presumptive evidence of the existence of some unusual properties in the nerves thus united; and for these reasons the physiology of the *chéisma* is invested with uncommon interest. . . . *R. Mayne, in Todd's Cyclopaedia of Anatomy and Physiology, Optic Nerve*. We must therefore remain satisfied with the simple fact, long known, that the cerebral portion of the optic nerve divides at the *chéisma* into two parts, of which the inner decussates with that of the opposite nerve, while the outer continues its course to the eye of the same side.—*Dr. Baly, Translation of Muller's Physiology*, p. 1198.

Chéibai. *s.* [Fr. *ciboule*; A.S. *cipe*; Lat. *cepa*.] Chive, or small kind of onion. *Obsolete*.

He strove to lengthen the campaign,
And savours forces by *chéicé*. *Prior*.

Chéicé. French, *chicaner*, to wrangle or pettifog (i. e. to quarrel). From *chique*, which must originally, like *chips*, have had the sense of a jag or me. *Chique*, a lump of bread (Patois de Brail); *de chier en chic*, from little go little (Odgerve); *chiquet*, a scall in the foot or end of a nail, sprig of a tree, stump of a tooth; *chiqueter*, to cut, push, jab, hook; *chiquettes*, cuttings, jags or shreds of cloth. The English *canter* then would be equivalent to the French *haggle*; to keep haggling and suppling at a thing instead of cutting it outright, and the French *chiqueter*, *chiqueter*, are used in the same sense; *chiquet*, to hack or whittle, also to haggle, pout, or dodge about the price of; *chiqueter*, to dodge, misbehave, pout. (Odgerve).—*Wedgwood, Dictionary of English Etymology*.

It does not become merely a larger bird, a larger ovule; it is entirely changed; it becomes—from a bud a blossom, a flower, a fruit, a seed; from an ovule it becomes an egg, a *chick*, a bird; or it may be a fetus, a child.—*Whewell, History of Scientific Ideas, li. 217.*

Chickenpox. s. See extract.

I must not omit a short notice of the disorder called *chicken-pox*; for, although a very unimportant complaint, it has given rise to many disputes. Other names which it has borne are *Variella*, *Cres-talla*, *Varicella pusilla*. These mild and irregular forms of *Varicella* (small-pox), both parents and medical men . . . are very apt to consider and call *chicken-pox*, and . . . some persons have rushed to or rather revived, the opposite opinion . . . that there is no such substantial disorder as *chicken-pox* but that all the eruptions which have passed under that name have really been forms of modified small pox.—*Dr. Watson, Lectures on the Principles and Practice of Physic, lect. lxxviii.*

Chicory. s. [in classical Lat. *chicoria*; in botanical, *cichorium*.] Native plant (*Cichorium Intybus*) so called.

There are three well-marked varieties.

1. The plant as it grows commonly. This is on roadsides, where neither the leaves nor the roots are much developed, and where the most conspicuous part is a beautiful blue flower on a tough and stringy stalk. The current name for this is *succory*; of which the botanical Latin is the origin, the *c* before the small vowel *i* being changed into *s* and the following *c* (improperly) doubled. This is the more vernacular form of the two.

2. The plant as an object of agriculture; where the chief development is that of the root; this being useful as a food for cattle, but specially cultivated to grind up and mix with coffee. This is the *chicory* properly so called, derived from the classical form *chicorea*. The spelling with two *es*, sometimes found, is vicious, the first syllable being short. See Casia.

3. The plant as an object of horticulture; where the chief development is that of the leaves for salads. The current name for this (from the specific name *Intybus*, in classical Latin *intyba*) is Endive.

The substitution of *chicory* for coffee was greatly encouraged by Bonaparte in order to harness the trade of England.—*Waterston, Cyclopaedia of Commerce, in voce.*

Chide. v. a. preterite *chid*, and more rarely *chode*, the older form (*chided* is inaccurate, inasmuch as the Anglo-Saxon conjugation of the verb was that of *speak, spoke, &c.*, where the notion of past time was conveyed by a change of vowel rather than by the addition of *d, t, or ed*); participle *chidden*. [A.S. *cidan*.]

J. Philips, Splendid Shilling.

Chints, *s.* [this word is not to be found in Wilson's Dictionary of Anglo-Indian terms, and the notion that it means a texture of five colours is probably due to its accidental resemblance to the French *cing* = five.] Cotton cloth printed in colours, and first made in India.

Let a charming *chint*, and Brussels lace,
Wrap my cold limbs, and shade my lifeless face.

Pope.

The coloured dresses represented in the Egyptian paintings, worn by women of rank, and by the deities, much resemble our modern *chintzes* in the style of their pattern, though it is probable that they were generally of linen instead of calico. *Sir J. [The editor has left the spelling of this word as he found it. Though it can scarcely be called an English word, it belongs to a class of terms which, if made English, would be useful.

The Substantive which it suggests, Chiragra, stands in the same relation to the Greek word *xip* = hand, that Podagra stands to *πῦς* (gen. *πυός*) = foot; the meaning of the former being *gout in the hand*. Podagra, on the contrary, though it may, and might conveniently, be restricted to *gout in the foot*, means *gout* in general. The *form*, however, of the word is what more especially commands attention; inasmuch as the compound in question is, for a reason which will soon appear, the best text for the discussion of a question of some importance. A reference to Chiroptera will show that the entry gives one orthography, the extract another; this being only a different way of saying that the principle upon which the Greek *α* is represented in English is uncertain.

The leading facts in this question are:—(1) the Latin practice of representing the Greek *α* by *i*, e.g. *xip* = *chir*—the quantity (long) being preserved: (2) the English practice of considering, by a sort of etymological fiction, that most words of

Greek origin came to us through the Latin, and are to be spelt as the Romans either did spell or would have spelt them. (See Cæc, Kay, Alcæid.) Admitting this, we are met by a complication in the word under notice. It is the earliest Latin derivative from *χίρ* known; the others, numerous as they are, belonging to the later stages of the language; and the form in which it appears in two well-known passages from Horace, and one from Persius, is neither in *ei* nor *i*. Neither is the vowel long. The form, in short, is *chēragra*. To consider this as made for the sake of the metre is to undervalue the fact that *χίρ-ος* as well as *χίρ-ος* is a genitive of *χίρ*; and, even if we treat *χίρ-ος* merely as a poetical form (as the lexicographers do), we must admit that it is the simpler and more radical. This suggests the likelihood that, if extreme Latinity of orthography be the aim of those who object to the use of the Greek *χ*, a case (at least in the compounds of *χίρ*) may be made in favour of *c*. If so, the question as to whether the Greek or the Latin spelling is changed is the question whether the basis of the Latin derivatives was *χίρ* or *χίρ*. It is probable that where the word was taken, as a whole, from the Greek the former principle prevailed; where put together by the Romans themselves, the latter.]

Other signs of melancholy there are taken from physiognomy, metempsychosis, *chirōmancy*. — *Burton, Anatomy of Melancholy*, p. 53.

Chirōpodist. *s.* (unless, contrary to the opinion of the editor, we derive the first element of this word from *χίρ* = hand, the proper spelling is with a *k*; since the use of *c* simply would create the risk of the word being sounded *stirōpodist*; and with *ch* we have a temptation to connect the derivation with *χίρ* = hand.) [? Gr. *κρίνω* = clip, shear, pare, and *πούς*, *πούς* = foot.] One who

professes to cure bunions, corns, and similar accidents in the feet; cornicutter.

Omitting, then, the Galeopithecus, the *Chirōptera* form, without perhaps a single exception, the most distinctly circumscribed and natural group to be found in the whole class of the Mammifera. The characters by which the order thus restricted is distinguished are as follow:—General form disposed for flight; an expansion of the integument stretched between the four members, and the fingers of the anterior extremities, which are greatly elongated for that purpose; the flying membrane naked, or nearly so, on both sides. Mammae pectoral, clavicles very robust; forearm incapable of rotation in consequence of the union of the bones of which it is composed. — *T. Bell, in Todd's Cyclopaedia of Anatomy and Physiology.*

Chirper. *s.* One that chirps; one that is cheerful: (in the following extract the word, as applied to one of the warblers, takes the guise of an ornithological name; for which, however, it is scarcely definite enough. It is not found in Yarrell, except so far as it applies to birds in general with a chirping note.)

The chirper . . . begins his notes in the middle of March, and continues them through the spring and summer till the end of August. — *White, Natural History of Selbourne*, let. 16.

2. With glass. Making cheerful. (Sometimes considered a shortened form of Cheeruping. Chirping, however, is the older word. The connection between the notions of chirping and cheerfulness, along with the simile 'merry as crickets,' makes it probable that Cheeruping is a mere catachresis.)

Jack T. . . has so far transgressed the Faunian law, which allows a chirping-quip to satirist not to surfeit to mirth not to madness. — *Howell, Familiar Letters.*

Of an Italian waist, we make an English poyntee; of a French ruff, an English *chitterling*, &c.—*Gauey, Delicate Diet for Drunkards*, 1576.

Chittyface. s. [The immediate origin of the word seems to be *chicheface*, a Norman-French word, and one which is still to be found in the French dictionaries. Cotgrave gives

• *Chiche-face*, m. a *chicheface*, micher, sunken-bill, wretched fellow, one out of whose nose hang drops.

For the first element, the derivation, as far as its French origin is concerned, is clear. Chiche sometimes explained *little*, of *no value*, more usually takes the allied meaning of *mean*, or *niggardly*. So it does in Cotgrave, as above.

Richardson, who has rightly connected the comparatively recent term Chittyface with *chicheface* rather than with *chik*, and is liberal in his instances of the use of the simple adjective, also supplies examples of Chichne, Chinchy, and Chinchery, all applied to avarice, but none later than Chaucer.

Its remote origin has been assigned to the Latin *siccus*—dry. It has also been treated as a word of Celtic origin. To this it may be added that a connection with the Latin *cicur* = tame (whence *mean-spirited*) is possible.

Upon a word regarding which no French lexicographer has ever professed to see his way clearly, the editor ventures a second conjecture, viz. that *face* = *vache*, and that *chicheface* was originally *chiche-vache* = lean cow, one of Pharaoh's lean kine.

The forms in -n, i.e. Chinchne and Chinchery = niggardliness, point in the direction of Chinch = bug or bloodsucker.]

? Lean-face: (used adjectivally in the extract).

I stole but a dirty pudding out of an alms-basket to give my dog when he was hungry, and the peaking *chicheface* page hit me in the teeth with it.—*Mansinger, Virgin Martyr*, ll. 1. (Rich.)

He would not cease 'till he reveng'd their wrongs.

Byrdon.

We find the divinity lectures of Don Quixote, and the punner of his squire, are both of them in the ritual of *chivalry*.—*Bishop Warburton, On Love's Labour's lost*.

I look upon *chivalry* as on some mighty river, which the fables of the poets have made immortal. It may have sprung up amidst rude rocks, and blind deserts. But the noise and rapidity of its course, the extent of country it adorns, and the towns and palaces it embles, may lead a traveller out of his way, and invite him to take a view of those dark caverns,

'unde superna

Phirinus Eridani per sylvam volvitur umis.'—*Bishop Hurd, Letters on Chivalry and Romance*, let. 2.

I thought ten thousand swords must have leaped from their scabbards to avenge even a look that threatened her with insult. But the age of *chivalry* is gone.—*Hurke, Reflections on the French Revolution*.

2. Salad plant so named (*Allium Schoenoprasum*).

The leaves are awl-shaped, threadlike, and produced in tufts. . . . *Chives*, when gathered, are cut or shorn by the surface, and on this account are generally named in the plural. The foliage is used as a salad ingredient in spring, being esteemed milder than onions or scallions.—*Loudon, Encyclopedia of Gardening*, in voce.

Chlorate (of Potash). s. Salt consisting of chloric acid and potassa, used as a de-flagrating powder in the manufacture of matches and percussion caps.

Chlorate, or oxychlorate, of potash has a cooling, somewhat impudent and nitrous, taste. It does not bleach. . . . When strongly triturated in a mortar it crackles, throws out sparks, and becomes huminous. It effervesces upon red-hot cinders like nitre; when triturated with salt sulphur or phosphorus, it detonates with great violence, not without danger to the hands of the operator if they be not protected by a thick glove. Similar detonations may be pro-

duced with cinnamon or vermillion, sulphuret of potassium, sugar, volatile oils, &c. A mixture of sugar or starch with *chlorate of pulask* is readily inflamed by a drop of sulphuric acid, and this experiment is the basis of the preparation of the oxygenated matches, as they have been commonly called.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chloride (of Lime). s. Third solution of the combination of lime and chlorine, used in bleaching, and as a disinfectant.

When a weak solution of caustic potash or soda is saturated with chlorine, it affords a bleaching liquor which is still used by some bleachers and calico-printers for their most delicate processes; but the price of the alkalis has led to the disuse of these *chlorides* as a general means, and has occasioned a general employment of *chloride of lime*.—*Ure, Dictionary of Arts, Manufactures, and Mines*. (See also extract under Chlorine.)

Chlorine. s. [the first syllable from the Gr. $\chi\lambda\omicron\rho\omicron\varsigma$ = grass-green; the second, one of the artificial terminations of Chemistry, showing that the elementary substance to which it applies is in the same class with Iodine, Bromine, and Fluorine. Its derivatives are numerous; some being the names of comparatively common objects in commerce and manufactures, as Chlorate, Chloric (acid), Chloride, Chloruret.] Elementary gaseous substance so called: (in the same class with Iodine, Bromine, and Fluorine, as indicated by its termination).

It [*chlorine*] has a peculiar smell, and irritates the nostrils most violently, when inhaled, as also the windpipe and lungs. It is eminently noxious to animal life, and if breathed in its undiluted state, would prove instantly fatal. It supports the combustion of many bodies, and indeed, spontaneously burns several without their being previously kindled. The resulting combinations are called *chlorides*, and act most important parts in many manufacturing processes. Water absorbs, at the ordinary temperature of the atmosphere, about double its volume of *chlorine*, and acquires the colour, smell, and taste of the gas, as well as its power of destroying or bleaching vegetable colours.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chloroform. s. [the *chlor-* is the first syllable in *chlorine*; the *form-* is the first in *formic*, the name of an acid obtained from ants, in Latin *formica*. The truncation of the word, i.e. the loss of the ordinary adjuncts *ic form*, as *ic, yk*, &c., gives it the appearance of a derivative from *form*—shape, with which it has nothing in common. The compound itself belongs to the nomenclature of Chemistry, the term being an artificial one. See first extract.]

In Chemistry. Limpid colourless liquid used for the production of a vapour causing, when inhaled, insensibility to pain; vapour so produced: (employed in Surgery to diminish the pain of operations).

[In a complex science, which is in a state of transition, capricious and detached derivations of terms are common; but are not satisfactory. In this remark I have especial reference to chemistry; in which the discoveries made, especially in organic chemistry, and the difficulty of reducing them to a system, have broken up in several instances the old nomenclature, without its being possible at present to construct a new set of terms systematically connected. Hence it has come to pass that chemists have constructed words in a capricious and detached way; as by taking fragments of words, and the like. . . . Several words have recently been formed by chemists, by taking syllables from two or more different words. Thus Chevreul discovered a substance to which he gave the name *Ethyl*, from the first syllables of the words *ether* and *alcohol*, because of its analogy to those liquids in point of composition. So Liebig has the word *chloral*. Liebig, examining the product of distillation of alcohol, sulphuric acid, and amber, found a substance which he termed *Aldehyd*, from the words *Alcohol dehydrogenated*. This mode of making words has been strongly objected to by M. Dumas. Still more has he objected to the word *Mercaptan* (of Zeise), which, he says, rests upon a mere play of words; for it means both *mercurium captans* and *mercurio aptans*. Dumas and Pelouze, working on pyrochthonous acids, found reason to believe the existence of a substance which they called *methylene*, deriving the name from *methy*, a spirituous fluid, and *ylene*, wood. Berzelius remarks that the name should rather be *methyli*, and that *oxy* may be taken in its signification of matter, to imply the Radical of Wine: and he proposes that

the older *Æther-Radical*, shall be called *Æthyl*, the newer *Methyl*. This notion of marking by the termination of the hypothetical compound radical of a series of chemical compounds has been generally adopted; and, as we see from the above reference, it must be regarded as representing the Greek word *ἄν*; and such hypothetical radicals of bases have been termed in general *basyle*. Bunsen obtained from Cade's fuming liquid a substance which he called *Alkalina* (*alkali-æmion*?), and the substance produced from this by oxidation he called *Alkarys*.

The discovery of *Isakodyl* was the first instance of the insulation of an organic metallic base. The first of the Hydrocarbon Radicals of the Alcohols was the radical of Tertiary alcohol obtained by Kolbe from Valerate of Potash, and hence called *Valyl*. *Chloroform* is perchloride of *formyl*, the hypothetical radical of formic acid. — [*W. Lewis, Novum Organum renovatum*, aph. xviii. with commentary.]

The safety, as well as the efficacy of this application of the vapour of ether, of *chloroform* ... has now been ascertained by abundant experience. And if we consider what it has done, and what it promises, ... we shall scarcely deem the proposal extravagant which has been made by one of our hospital physicians, that, for so merciful a boon to suffering humanity, public thanksgiving should be humbly offered up to Heaven in our churches. — *Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Chlorómeter. s. Instrument for Chlorometry.

In graduating the arsenical *chlorometer*, M. Gay-Lussac takes for its unity the decolorizing power of one volume of chlorine at 32° Fahrenheit, and divides it into a hundred parts. — *Ure, Dictionary of Arts, Manufactures, and Mines*.

Chlorómetry. s. [Gr. μέτρον = measure.] Process for measuring, or testing, the decolorizing, or bleaching, power of the commoner commercial chlorides.

He [Gay-Lussac] now prescribes as the preferable plan of *chlorometry*, to pour very slowly from a graduated glass tube a standard solution of the chloride, to be tested upon a determinate quantity of arsenious acid dissolved in muriatic acid, till the whole arsenious is converted into the arsenic acids. The value of the chloride is greater, the less of it is required to produce this effect. — *Ure, Dictionary of Arts, Manufactures, and Mines*.

Chlorophyll. s. [Gr. χλωρός = green, φύλλον = leaf.] In *Botany*. Colouring matter of vegetables.

To this is referred all the kinds of coloured granules which occupy the interior of vegetable tissue. They have a spheroidal, irregular figure, are often angular, and consist of a semi-fluid gelatinous substance, which seems to be a conglomeration of the fluid contents of the cells. The colour of plants, especially the green colour, is produced by the presence of *chlorophyll*, which may be considered a white secretion. — *Lindley, Introduction to Botany*, b. i. sect. 7, § 83.

Chlorosis. s. [Gr. χλωρός = green.] Medical term for Greensickness.

But the man without sin, the Moravian rabbi, Has perfectly cured the *chlorosis* of Tabby.

Hath a whole wardrobe at command in store;
And in the tavern in his cups doth roar,
Chocking his crown.

Drayton, Agincourt, p. 79. (Ord MS.)

Chock-full. adj. [Apparently from *choke*-full; a derivation which is not incompatible with the provincial German form *geschocht voll* given by Wedgwood; though, perhaps, independent of it; the German origin of the word being uncertain; at any rate only indirectly connected with *choke*.] Full up to the brim. *Colloquial*.

Chócolate. s. [Spanish.] Nut of the Theobroma Cacao; cake or mass made by grinding the kernel of the cacao-nut with other substances; infusion of the same.

And tremble at the sea that froths below.

The Spaniards were the first who brought chocolate into use in Europe, to promote the consumption of the cacao-nuts, which, and other drugs, which their West India furnish, and which enter the composition of chocolate. — *Chambers*.

Chocolate is flavoured with cinnamon and cloves in several countries instead of the more expensive vanilla. In roasting the beans the heat should at first be very slow, to give time for the humidity to escape, ... *Chocolate* is sometimes adulterated with starch; in which case it will form a pasty consistency when treated with boiling water. — *Ure, Dictionary of Arts, Manufactures, and Mines*.

The Duchess of Portsmouth had poisoned him in a cup of chocolate. — *Macaulay, History of England*, ch. iv.

He has given both the fruits and the explanation as he found them. It is, however, his opinion that the whole class originated in names for fungi causing either coughing or sneezing, compared with certain fruits of the size or shape of each particular instance.

Mercury, aloes, rhubarb, and iacaxum have been considered to possess this property. *Pereira, Elements of Materia Medica and Therapeutics, p. 219.*

There is a complaint . . . that shows itself in this country more or less every autumn, and prevails extensively in some years as a minor epidemic. It is rightly enough named *cholera*; for it is attended with, and consists mainly, of a remarkable flux of bile. . . . Such is the disease which has long been familiar to English practitioners as *cholera*; but about the end of the first third-part of the present century, this country was visited by a severe epidemic disorder which was also called *cholera*; or, by way of emphasis, the *cholera*, or sometimes spasmodic *cholera*, or Asiatic *cholera*, or malignant *cholera*. . . . I may call it epidemic *cholera*. . . . The epidemic *cholera* so far resembled the summer *cholera*, that it was attended by profuse vomiting and purging. . . . but it differed. . . . In the matters ejected from the stomach containing no bile, and this alone is a good reason against calling the disease *cholera*.—*Watson, Lectures on the Principles and Practice of Physic, lect. lxiii.*

Where the adjective Choleric is used, it is a medical term derived from *cholera* not from *choler*, and means connected with *cholera* the disease.

Within a month after she is married,
Chopping for rotten raisins.

Beaumont and Fletcher, The Captain.

3. Bandy; alternate; return one thing or
word for another.

Let not the council at the bar *chop* with the judge,

nor wind himself into the handling of the cause
anew, after the judge hath declared his sentence. —
Bacon.

[The syllable *chap* or *chop* represents the sound of a
sudden blow; Scotch, *chap hands*, to strike hands, to
chap at a door; to *chop*, to hack, cut up into small
pieces. *Chap, chop, choppe*, a blow. (Jamieson.)
Hence, to *chop* is to do anything suddenly, as with
a blow, to turn. A greyhound *chops* up a hare when
it catches it unawares; to *chop* up in prison, to *chap*
up (Halliwell); the wind *chops* round when it makes
a sudden turn to a different quarter. From the notion
of turning round the word *chop* passes to the
sense of exchange, an exchange being the transfer
of something with the return of an equivalent on
the other side. Thus we speak of *chopping* and
changing; to *chop* horses with one, to exchange
horses. The Scotch and North of England *coup*,
Warwickshire *cuff*, Icelandic *kaup, kypa*, are used
in the same sense. 'Nidast hó hann at Hólmi thvint
hann keipti við Hólmstarna bæði londum og konum
og lausa fé öllu.' At last he dwelt at Hólmi because
he and Hólmstarna had *chopped* both lands and
wives and all their movables. 'Enn Sigridur son
hann átti áður hængul skó hofeno thvint hún villdi
eigi manna-kaupin.' But Sigrid whom he before
had to wife lugged herself in the temple, because
she would not endure this husband-chopping. (Land-
mannabók, p. 48.) This *chop* is connected with Ger-
man *kaufen*, English *cheap, chapman*, &c. In
Scotch *coup* the original sense of turning is com-
bined with that of trafficking, dealing. To *coup*, to
overturn, overset. (Jamieson.) The whirling stream
will make our boat to *coup*, i. e. to turn over.
'They are forayers of quibit, bear and aits,
coppers, sellers and buyers thereof in merchandise.'
(Jamieson.)

Horse-couper, cow-couper, one who buys and sells
horses or cows; *saal-couper*, a trafficker in souls. —
Welwood, Dictionary of English Etymology, i.]

1. In the way to suit a choir.

When the words are attended to by the eye, there
is a plaintive cry in the strain which makes the
well-known anthem, 'I call and cry,' somewhat af-
fecting; I think, however, a modern composer would
judge ill if he chose to set the same words chorally.
—*Mason, Essay on Church Music*, p. 116.

2. In the manner of a chorus.

Marcelline sing their wild 'To Arms' in chorus;
which now all men, all women and children have

2. Combination of two or more contemporaneous musical sounds. See Harmonics.
3. Straight line which joins the extremities of an arc.

This form has also the advantage of covering the line of retreat better than the first; at the same time that it enables any one part of the line to be more quickly reinforced from any other part, because troops passing between any two parts move on the chord of an arc, while in the first case, all movements of that nature being in rear of the line, troops passing between any two parts must march round the circumference. — *MacDonall, Modern Warfare as influenced by modern Artillery*, ch. vi.

Chórēda, *adj.* Furnished with strings or chords; stringed.

What passion cannot music raise and quell?
When Jubal struck the chórēda shell,

Of the nature of a choriámblus; constituting a choriámblus; consisting of choriámblī: (applied both to the foot itself, and to certain metres characterized by it). See Iambic.

Choriámblus, *s.* [*Lat.*] In *Greek and Latin Prosody*. Foot of four syllables, of which the first and last are long, the two intervening ones short, as in *cárricūlūm*.

Mr. Trochee was what Dr. Johnson called a sound sullen scholar. . . . He had a clear head, and no inconsiderable amount of that old-fashioned outlandish kind of merriness so much in vogue during the last century. He was, indeed, exemplary in his way, and if you had asked him what 'religio' was, he would have replied at once that was a *choriámblus*. — *Hannay, Singleton Fonthrop*, to l. ch. i.

This word being limited to Greek and Latin prosody, the reasons which, either really or apparently, justify the application of the terms Anapest, Dactyl, Iambic, and Trochee to certain English feet or measures have no place here. The same applies to Choliámblē.

Chórion, *s.* [*Gr.*] In *Physiology*. Outer covering of the ovum (egg).

In birds the shell with its lining membrane forms the external covering of the egg. . . . The ovum of mammalia at the time when it arrives at the uterus has also a similar external envelope, which has received in man and most animals the general appellation of *chorion*. — *Dr. Allen Thompson, Generation*, in *Todd's Cyclopædia of Anatomy and Physiology*.

Chorógrapher, *s.* [*Gr. χῶρος* = region, γράφειν = describe.]

1. One who describes particular regions or countries.

The truth is only to be found in their works, who celebrate the lives of great men, and are commonly called biographers, as the others should indeed be termed topographers or chorographers: words which might well mark the distinction between them; it being the business of the latter chiefly to describe countries and cities, which, with the assistance of maps, they do justly, and may be depended upon; but as to the nations and characters of men, their writings are not quite so authentic, of which there needs no other proof than those eternal contradictions, occurring between two topographers who undertake the history of the same country. — *Fielding, Adventures of Joseph Andrews*.

2. Geographical antiquarian or critic who, in the comparison of modern with ancient geography, investigates the locality of places mentioned in the older writers, and discusses the question of names for which the site, and sites for which the name, is uncertain.

Places unknown, better harped at in Camden and other chorographers. — *Milton, History of England*, b. iv.

Nursia, situated in Umbria, which our modern chorographers call Spoleto. — *Tissot*, p. 8.

This is the sense to which the word, at present, may conveniently be restricted. The enquiry it denotes is one of a definite, species, and important kind; for which there is no unequivocal name. Nor is it wanted for any other purpose; notwithstanding the remark under Chorography in the previous editions, that 'it is less in its object than Geography, and greater than Topography.'

Chorógraphical, *adj.* Appertaining to, or having the character of, Chorography.

I have added a chorographical description of this terrestrial paradise. — *Sir W. Raleigh, History of the World*.

Medlinks it would well please any man to look upon chorographical, topographical delineations; to behold, as it were, all the remote provinces, towns, cities of the world. — *Barton, Anatomy of Melancholy*, p. 274.

As in a map, Zion's chorography.

— *Bishop King, On Sandys's Psalms*.

Chorógraphy, *s.* [from *Gr. χορός* = dance.] Description of dancing. (In the following extract it is the title of a work; and, as such, a proper rather than a common name. It was, however, though it has failed to take

root in our language, probably intended to be a word of the same general import as Geography, and the other compounds of *γῶγ*; and it is likely that instances of its use as a common term may be found. In some of the dictionaries and cyclopædias it is spelt *Chorography*, perhaps to distinguish it from *Chorography*, description of countries, perhaps under the notion that it came from *chorea*).

For the further improvement of dancing. A Treatise of *Chorography* or the Art of Dancing Country Junes after a new character, &c. Translated from the French of Monsr. Feuillet. . . . By John Essex, Dancing Master. London: 1710.

Chórēid, *adj.* Appertaining to the vascular, as opposed to the specially nervous, portion of the retina.

Used substantively for the vascular portion itself.

Chórūs, *s.* [*Lat.*]

And fill the general *chorus* of mankind! — *Pope*.

2. Persons who are supposed to behold what passes in a tragedy, and sing their sentiments between the acts; piece of lyric poetry so sung.

3. Part of a musical composition in which the company join the singer.

Let's all join in *chorus* and give him our praise,
For sure such a man was ne'er seen in our days.
— *Song on Linaurdi's Ballad*.

Chosē, *s.* [*Fr. chose* = thing, matter; from the Latin *causa* = cause, whence its special legal import.] Matter; subject-matter; question. See extract.

Chose is used in divers senses, of which the four following are the most important: (1) *Chose* local, a thing annexed to a place, as a mill, &c. (2) *Chose* transitory, that which is moveable, and not taken away, or carried from place to place. (3) *Chose* in action, otherwise called *chose* in suspense, of which a man has not the possession or actual enjoyment, but has a right to demand it by action or other proceeding. . . . (4) *Chose* in possession, where a person has not only the right to enjoy, but also the actual enjoyment of a thing. — *Wharton, Law Lexicon*.

Chosēn, *part. adj.* Selected; elected.

If king Lewis vouchsafe to furnish us
With some few bands of *chosēn* soldiers,
I'll undertake to land them on our coast.

— *Shakespeare, Henry VI.* Part III. iii. 1.

Your lordship's thoughts are always just, your numbers harmonious, your words *chosēn*, your expressions strong and manly, your verse flowing, and your turns as happy as they are easy. — *Dryden, Essay on the *Bucol**. (Ord MS.)

Chough, *s.* [*A.S. crou*.] Bird (*Fregilus Graeculus*) resembling a jackdaw, but with red beak and red legs; commonest in Cornwall, whence called the Cornish Chough. See last extract. (For a local bird the chough is mentioned remarkably often by

the old writers; certainly by many who never saw one. The bird itself may have been commoner than it is now. It is more probable, however, that the term had then a wider application.)

In birds, kites and kestrels have a resemblance with hawks, crows with ravens, daws, and *choughs*. — *Iacon, Natural and Experimental History*. To crows the like impartial grace affords. And *choughs* and daws, and such republic birds.

From the Starling and Pouter . . . the transition [from the Starling] to the true crows by the intervening *chough* is easy and natural. . . . The Cornish *chough*, for which the genus *Fregilus* was established by Cuvier, is readily distinguished from the true crows by the peculiar form of its beak. In this country the *chough* is not a common bird, and is, besides, almost exclusively confined to the sea coast, where it inhabits the highest and most inaccessible portions of rocks or cliffs, about which it walks securely by means of its strong legs, toes, and claws. . . . The voice of the *chough* is shrill, but not disagreeable, and something like that of the Oyster-catcher. The *chough* is found in Guernsey, but not in Jersey. . . . Pennant says 'the *chough* is found in small numbers on Dover cliff, where they are, by accident, a gentleman in that neighbourhood had a pair sent to him as a present from Cornwall which escaped and stocked those rocks.' No date is mentioned, though apparently referring to his own time; but there is a poetical authority, at least, for the existence of this bird at a much earlier date. Shakespeare, in his description of the celebrated cliff which now bears his name, says, in reference to its birds, —

"The crows and *choughs* that wing the midway air Show scarce so gross a beetle."

Possibly [this is in a note] Shakespeare meant Jackdaws, for in the Midsummer Night's Dream he speaks of the russet-pated (grey-headed) *choughs*, which term is applicable to the Jackdaw, but not to the real *chough*. . . . The *chough* is noticed as peculiar to Cornwall by Dr. William Turner in 1541. — *Torrell, British Birds*.

Choule. s. [See Jowl.] Fleishy excrescence growing under the throat of the turkey and some other fowls; wattle: (the description in the extract is *erroneous*).

The *choule* or crop, adhering unto the lower side of the bill, and so descending by the throat, is a lace or sachel. — *Sir T. Browne, Vulgar Errors*.

Chouse. v. a. [See last extract.] Cheat; trick; impose upon.

From London they came, silly people to *chouse*. Their lands and their faces unknown. — *Swift*. Our islanders, however they may pretend to *chouse* one another, they make but very awkward rogues. — *Tatler*, no. 213.

"In hind, yes, and tricked, *choused*, slugged and banished" (Gold, take him against the field — *clay* — *law* — *ick* — *no* that have wicked hundreds. — *O'Keefe, Foutinichian*, iii. 4.

With of.

Yes, you are mighty wise, I warrant, mighty wise! With all your godly tricks and artifice, Who think to *chouse* me of my dear and pleasant vice.

Oldham, A Drunkard's Speech in a Musk. In 1696 Sir Robert Shirley, who was about to come to England with a mission from the Grand Signior and the King of Persia, sent before him a *Chiaus*, who took in the Turkey and Persia merchants in a way that obtained much notoriety at the time. Hence to *chiaus* became a slang word for to defraud. (Gifford's Ben Jonson, 4, 27.) In the Alchemist, which was written in 1610, we find the following passage:

"Dap. And will I tell thee? by this hand of flesh Would it might never write good court land more If I discover. What do you think of me, That I am a *chiaus*?"

Face. What's that? Dap. The Turk was here As one should say, Doe you think I am a Turk? — Face. Come, noble Doctor, pray thee let's prevail — You deal now with a noble gentleman, One that will thank you richly, and he is no *chiaus* —

Blight I bring you No cheating Clim of the Cloughs? (Alchemist.) 'We are in a fair way to be ridiculous. What think you, Madam, *chiaus*'d by a scholar?' (Shirley in Gifford.) — *Wedgwood, Dictionary of English Etymology*.

Chouse. s. Cheat: (in the extract, however, it rather means the person cheated).

Chowre. v. n. [?] Show signs of crossness of temper, though in what particular way is uncertain.

Chromatistics. s. [Gr. *χρῶμα*, -ατος, pl. -ατα = thing, property, wealth. The *e* long. For the import of the plural ending -α, see remarks under Chromatics. The immediate origin of the word is the hypothetical adjective *χρωματικός*, i.e. after the manner of one who *chromatizes*; for which see Christianity.] Word suggested as a term (after the manner of Physics, Optics, and the like) for the phrase Political Economy, or, at least, for that part of it which relates to the acquisition of wealth.

(It is about thirty years since this word was suggested in a periodical. It is to be found in Wharton's Law Lexicon as a simple entry with an explanation, and perhaps elsewhere with more recognition. Still it has not taken root, though Political Economy is a cumbersome term. For a fundamental word, however, or one from which others are likely to be derived, as *Statistician* from *Statistics*, it is too long.)

They [continental writers] consider political economy as a term more properly applicable to the whole range of subjects which comprise the material welfare of states and citizens, and *chromatistics* (by which they mean nearly the same science which McCulloch and most other English writers describe as political economy) as merely a branch of it. — *Brande, Dictionary of Science and Art*.

Chrestomathy. s. [Gr. *χρηστιάσις* = good useful learning, or thing learnt; from *χρηστικός* = good, and the root of *μαθήω* = learn, *μάθησις* = learning: the *e* long.]

Selection of extracts either on account of their intrinsic merits, or for the purpose of teaching a language: (as the title of a book, a *proper* rather than a *common* term; and generally a translation of either the Latin *Chrestomathia* or the French *Chrestomathie*).

Chrim. s. [Gr. *χρίσμα*.]

1. Unguent, or unction, employed in sacred ceremonies.

One act never to be repeated, is not the thing that Christ's eternal priesthood, devoted especially by his unction or *chrim*, refers to. — *Hammont, Practical Catechism*.

O Lord, the God of our fathers, do thou bless this oil with power, energy, and illumination of the Holy Spirit, that it may be the *chrim* against all filthiness. — *Sir P. Keyser, Present State of the Greek and Armenian Churches*, p. 159.

He solicited the favour of England, by sending Henry a sacred rose, perfumed with musk, and anointed with *chrim*. — *Hume, History of England, Henry VIII*.

The next day he was anointed with their *chrim*, or holy oil. — *Turkish Spy*, vol. v. b. ii. let. 17.

Chrim was the holy oil with which heretofore all infants were anointed. This was made by the bishops, and, by a constitution of Archbishop Præbman, was to be renewed once a year. — *Barn, Ecclesiastical Law*.

Among the dreadful acts of heresy and schism which were to divide for ever the churches of the East and West were: I. The observance of Saturday as a fast. II. The permission to eat milk or cheese during Lent. IV. The restriction of the *chrim* to the bishops. VI. The promotion of deacons at once to the episcopal dignity. VII. The consecration of a lamb, according to the hated Jewish usage. VIII. The shaving of their beards by the clergy. — *Milman, History of Latin Christianity*, b. v. ch. 4.

2. Cloth itself: (with which also women used to shroud the child, if dying within the month).

The godfathers and godmothers shall take and lay their hands upon the child, and the minister shall put upon him his white vesture, commonly called the *chrim*. — *Order of Baptism in the time of King Edward VI*.

Used adjectively.

As undiscerned as are the phantoms that make a *chrim* child to smile. — *Jeremy Taylor, Rule and Exercises of Holy Living*, i. § 2.

Chrimal. adj. Relating to, used in, or applied to the purposes of, *chrim*.

Having thus conjured and prayed, he falls upon singing the praises of this *chrimal* oil. — *Brevint, Saul and Samuel at Endor*, p. 318.

Chrimation. s. Application of, or practice of applying, the *chrim*. *Rare*.

The case is evident that *chrimation*, or cross-signing with oilment, was used in baptism; and it is evident that this *chrimation* was it which St. Gregory permitted to the presbyters. — *Jeremy Taylor, Episcopacy asserted*, p. 197. (Oud MS.)

Chrimatory. s. Small vessel for the oil intended for *chrim*; cruet or vessel for oil in general.

Cruets, *chrimatories*, corporances, and chalices, which for thy whorish holiness might not sometime be touched, but will for thy sake be abhorred of all men. — *Bale, Discourse on the Revelations*, pt. II. Bk. viii.

The word is sometimes translated *lenticula*, a *chrimatory*, or cruet, or vessel to contain oil; sometimes orbis, a spherical body encompassing others. — *Smith, Portrait of Old Age*, p. 216.

Chrim. s.

1. Cloth anointed with holy unguent, which children anciently wore till christened.

Chrim, in the office of baptism, was a white vesture which the priest did put upon the child, saying, 'Take this white vesture for a token of innocency; and so on.' — *Burn, Ecclesiastical Law*.

Used adjectively, as *chrim* child. See *Chrim*. Hence

2. Child itself so long as it wore the cloth, i.e. until christened: (the time for the christening, according to some authorities, being one month; whence, unless the date of its christening is known, a *chrim* or *chrim* child means, presumptively, a child under a month).

When the convulsions were but few, the number of *chrim*s and infants was greater. — *Graunt, Bills of Mortality*.

The first common prayer book of King Edward orders that the woman shall offer the *chrim*, when she comes to be church'd; but if the child happens to die before her churching, she was excused from offering it; and it was customary to use it as a shroud, and to wrap the child in it when it was buried. Hence, by an abuse of words, the term (*chrim*) is now used, not to denote children who die between the time of their baptism and the churching of the mother, but to denote children who die before they are baptized, and so are susceptible of Christian burial. — *Lock, Church Dictionary*, in voce.

[Few words occur in English which end in -om, as a complete and separate element in composition; and few in which a combination of two consonants which can be pronounced either fully so as to make a second syllable, or in a slurring-manner so as to make but one, (e.g. *hē-nū, hēn* — heaven,) encourages the interposition of a vowel between them. Least of all is there employed in such cases a broad vowel like *o*. Hence,

If *chrim* be simply the way of spelling *chrim* with a broader pronunciation than that demanded by its etymology (*χρίσμα*), it is an unusual one.

The exact history of the word requires a special investigation, founded more particularly upon the detail of the lower and more popular literature of the time of the Reformation. Compared with *chrim*, it appears to be more or less of a vulgarism; and if this be the case, the fact of its primary meaning being *cloth* or *vest* should not be taken notice. Combined with it must be the fact of the A.S. for covering, cloth, armour, &c., being the word *ham*. This is the *ham*- in the modern word *Hammercloth* (*hama-cloth*) as applied to the cloth covering the box of a coach.

It is suggested that it may also be the -om in *chris-om*.]

Christ-cross. s. Mark of the cross, as cut, painted, written, or stamped on certain objects.

1. In the following extract it stands on a dial in the place of the figure XII, i.e. as the sign of twelve o'clock.

Fall to your business soundly; the fescue of the dial is upon the *christ-cross* of noon. — *The Puritan*, iv. 2. (Nares by H. and W.)

2. In the following (and this was the most usual application) it means, probably, the Alpha and Omega, or beginning and end.

Christ's cross is the *christ-cross* of all our happiness. — *Quarles*, Emblems, (Ibid.)

Christ-cross-row. s. [divided *Christcross-row*; pronounced *Crisscross-row*; and by this pronunciation conveying the notion that it merely rings a change on the similar syllables *criss* and *cross*. Its real derivation, however, is from the sign of the cross which preceded the letters.] Alphabet.

The cross of Christ, in its second and metaphorical acceptation, is the Christian's burden and badge; that which he is to take up, that which he is to glory in. The one is a paradox, and a smart one to the flesh; the other to the world; but both, truths to be learnt before ever a letter in the Christian's *Christ-cross-row*; as being indeed, though none of the letters, as instructive as all the four and twenty. — *Whitlock*, *Observations on the present Manners of the English*, p. 527: 1654.

Christ-tide. s. [with *tide* = time, as in *Shrovetide*.] Christmas: (as some of the Puritan Dramatis Personæ of the Elizabethan period are represented to call that season, out of dislike to the word *mass*).

Let *Christ-tide* be thy fast,
And Lent thy good request.

And regard not our holy day.

— *Bartholomew*, *The Ordinary*: 1651.

And then the turning of this lawyer's paw
To plate at Christmas. — *Christ-tide*, I pray you.

— *B. Jonson*, *Alchemist*, iii. 2.

Christ's-thorn. s. [two words rather than a compound.] Name of a prickly shrub (*Palurus australis*).

The hedge in the finest cultivation are divided by hedges of alow, *christ-thorn*, or wild pomegranate. — *Swinhurne*, *Travels through Spain*, let. 2.

Christen. v. a.

1. Receive anyone, chiefly a child, as a member of the Christian church, by the ceremony of giving him a *Christian* name.

The minister of the parish where the child was born or *christened*, shall examine whether the child be lawfully baptized or no. — *Book of Common Prayer*, *Private Baptism*, rubric.

In the following extract the meaning is rather uncertain, or only capable of being explained after a minute inspection of the works of the author from whom it is taken.

(1.) It may mean *Christianize*. Or,

(2.) It may personify England, and mean Baptized, or admitted as Christian.

The use of the neuter pronoun it is in favour of the former meaning, without, however, being conclusive.

I am most certain this is the first example in English since it was first *christened*. — *Jeremy Taylor*, *Discourse on ecclesiastical Prayer*.

2. Name; denominate.

Where such evils as these reign, *christen* the thing what you will, it can be no better than a mock millennium. — *T. Burnet*.

Christen. v. n. Be competent to administer the rite of Christening: (applied to *districts* and *persons*).

This should not exempt them from contributing towards the repairs of the mother-church; any, though they should *christen* and receive the sacrament therein. As the parishmen had these wharves at first for their own ease, so they may resort to the mother-church, bury, *christen*, marry, and have all other services and advantages from them. — *Ayliffe*, *Parergon Jæni Canonici*, 456. (Ord MS.)

Christendom. s.

1. Area over which Christianity is either the ruling or the recognized religion.

a. Viewed geographically.

What hath been done, the parts of *Christendom* most afflicted can best testify. — *Hooker*.

An older and a better soldier, none
That *Christendom* gives out.

— *Shakespeare*, *Macbeth*, iv. 3.

Columban and his immediate followers had hardly extended the influence of Christianity beyond the borders of the old Roman empire. But, important as outposts on the verge of *Christendom*, or even in districts which had reverted to barbarism, gradually encircling themselves with an enlarging belt of cultivation and of Christianity, they were only thus gradually and indirectly aggressive. Another century more nearly elapsed when the Apostle of Germany came forth from a different part of the British Isles. — *Milman*, *History of Latin Christianity*.

His computation is universally received over all *Christendom*. — *Holder*, *Discourse concerning Time*.

- b. Viewed in respect to the population of Christians, rather than to the area occupied by them.

The destruction of Jerusalem is the only subject now remaining for an epic poem; a subject which, like Milton's Fall of Man, should interest all *Christendom*, as the Homeric War of T. g. interested all Greece. — *Coleridge*, *Table Talk*.

2. Christianity; Christian condition. *Obsolete*.

They would not be Christians, if they should have valued the vow of their widowhood above the vow of their *christendom*. — *Bishop Hall*, *Honour of married Clergy*, § 2. (Ord MS.)

This rests upon the practice apostolical and traditions interpretation of Holy Church, and yet cannot be denied that so it ought to be, by any man that would not have his *christendom* suspected. — *Jeremy Taylor*, *Episcopacy asserted*, § 16. (Ord MS.)

Bellarmino says, they are not Christians that eat flesh in Lent, which words are extremely false, or else every one that disavows an ecclesiastical law hath forfeited his *christendom*. — *Id.*, *Ductor Dubitantium*, ii. 306. (Ord MS.)

[The *-dom* in *Christendom* is the *dom* in *Domesday Book*, *doom*, and *decem* = judgment, jurisdiction.

From *jurisdiction* we get the area over which it spreads. Hence, the geographical import given to the word *christendom* is the one which alone is etymologically accurate.]

Christening. verbal abs. Ceremony of receiving the person christened as a member of the Christian church by the imposition of a *Christian* name; attendant festivities.

The queen was with great solemnity crowned at Westminster, about two years after the marriage; like an old *christening*, that had staid long for godfathers. — *Bacon*.

We shall insert the causes, why the account of *christenings* hath been neglected more than that of burials. — *Graunt*, *Observations on the Bills of Mortality*.

The day of the *christening* being come, the house was filled with gossip. — *Lea*, *London and Pope*.

Used adjectivally.

My thoughts no *christening* dinners cost,
No children cry'd for butter'd toast.

— *T. Warton*, *Progress of Discontent*.

Christian. s. [Lat. *Christianus*.] Professor of the religion of Christ.

The disciples were called *Christians* first in Antioch. — *Ibid.*, xi. 26.

We *Christians* have certainly the best and the holiest, the wisest and most reasonable religion in the world. — *Archbishop Tillotson*.

Christian. adj. Professing the religion of Christ.

I'll not be made a soft and dull-eyed fool,
To shake the head, relent, and sigh, and yield
To *christian* intercessors.

— *Shakespeare*, *Merchant of Venice*, iii. 3.

In the Church of England the people were never admitted to the choice of a bishop from its first becoming *Christian* to this very day; and therefore to take it from the clergy, and to invest it always was by permission of princes, and to interest the people in it, is to reveal a traditionalism majorum, from the religion of our forefathers, and to innovate in a high proportion. — *Jeremy Taylor*, *Episcopacy asserted*, § 40—48. (Ord MS.)

In the following extract the adjective, as in *letters-patent*, *heirs-general*, instead of preceding, comes after the substantive.

In briefly recounting the various species of ecclesiastical courts, or, as they are often styled, *Courts Christian*, I shall begin with the lowest. — *Sir W. Blackstone*, *Commentaries on the Laws of England*.

Christianism. s. Imperfect, approximate, colourable, outward, or affected Christianity; Christianity without its essentials.

That I may not seem, rather forcibly, to break out

here out of Platonism into Christianity. — *Dr. H. More*, *Song of the Soul*, prol.

Herein, the worst of kings, professing *Christianism*, have by far exceeded him. — *Milton*, *Eiconoclast*, ch. i.

To believe antichristianly *Christianism*, and Christianity antichristian. — *Chillingworth*, *Religion of Protestants a safe Way to Salvation*, prol.

[The *-ism* in this word is the Greek *-ισμος*, a termination which implies a verb ending in *-ίζω*: e.g. *Μηδίζω* = become, or take the character of, a Mede; *Μηδικός* = Median character so taken; *Φιλιππίσμις* = become a partisan of Philip; *Φιλιππισμός* = partisanship so denoted.

As words of this kind imply, in the adoption of one character, some abandonment of an earlier one, they carry with them a certain amount of disparagement. This explains the definition; it being held that *Christianism* is a word which should never be treated as even an approximate synonym for Christianity. The distinctness or prominence of this sense of disparagement varies with the base; sometimes giving an evidently contemptuous term, sometimes one in which the disparagement is almost evanescent.

Though of Greek origin, the elements *ize* and *ism* attach themselves to bases other than Greek; indeed they did so, in some instances, during the classical period of the Latin.

Like the compounds of *flo*, i.e. the verbs ending in *fy* (see *Caleify*), though originally neuter, the element *-ize* is largely used in an active sense.

It may be laid down as a general rule that the sense of disparagement is less in the Verb than in the Substantive, and less in the Neuter verb than in the Active; indeed in the latter it may wholly disappear; the notion conveyed by the Neuter, of either loss of original character or incomplete adoption of a new one (a notion suggesting a *went* of power) being superseded in the Active by that of an effect produced, or an end attained; this implying an exertion of power.]

Christianity. s. Christian religion.

God hath will that complex, which are married, both infidels, if either party be converted into *Christianity*, this should not unke separation. — *Hooker*.

Every one who lives in the habitual practice of any voluntary sin, casts himself off from *Christianity*. — *Addison*.

Christianization. s. Act of rendering anything Christian.

Already there was born to the imperial house that still greater reformer [Peter the Great], who in the next generation was to carry out more than all that *Nixon* in his highest dreams could have anticipated, if not for the *christianization*, at least for the civilization, of the clergy and people of Russia. — *Stanley*, *Lectures on the Eastern Church*, lect. xi.

Christianize. v. a. Make Christian; convert to Christianity. See *Christianism*.

Good dispositions and natural graces, more ready to be advanced by impressions from above, and *christianized* unto piety. — *Sir T. Browne*, *Christian Morals*, ii. 12.

Till this excellent piece of philosophy be, as Clement said of the Pagan school, *κατασκευασμένη* *ἐκ* *Χριστού*, baptized by that baptism, *christianized* by the addition of repentance. — *Hammond*, *Sermons*, iv.

To *christianize* them [the Poles], as Dr. Watts has done, would, I presume, deviate too far from the present practice of our establishment. — *Mason*, *Essays on Church Music*, p. 194.

The principles of Platonick philosophy, as it is now *christianized*. — *Dryden*.

Christianize. v. n. 'Approach, imitate, affect, or adopt (but not entirely), the character of a Christian.

As neuters, both this verb and its participial adjective are comparatively rare. Such expressions, however, as 'the Pagans began to *christianize*,' and '*christianizing* philosophers,' illustrate their import.

Christianizing. *part. adj.*

1. From *v. n.* Approaching the character of a Christian.
2. From *v. a.* Encouraging the adoption of the Christian character.

It is impossible to follow out to their utmost extent, or to appreciate too highly, the ennobling, liberalising, humanising, *Christianizing* effects of church architecture during the middle ages.—*Milton, History of Latin Christianity*, b. xv. ch. viii.

Christianlike. *adj.* Like a Christian.

Although the duke was enemy to him,
Yet he, most *christianlike*, laments his death.
Shakespeare, Henry VI. Part II. iii. 2.
In the muzzing of quarrels you may say he is wise; for either he avoids them with great discretion, or undertakes them with a most *christianlike* fear.—*Id., Much Ado about Nothing*, ii. 3.

Christianly. *adj.* Christianlike.

To inured in us this generous and *christianly* reverence one of another.—*Milton, Reason of Church Government*, l. ii.

To do well and say nothing is *christianly* to say well, and do nothing, is pharisaical.—*Bishop Newsham, Daily Thoughts*.

Christianly. *adv.* Like a Christian; as becomes one who holds the Christian faith.

That they may see their children *christianly* and virtuously brought up.—*Book of Common Prayer, Form of Solemnization of Matrimony*.

These deep and retired thoughts, which, with every new *christianly* instruction, ought to be most frequent of God, and of his miraculous ways and works amongst men.—*Milton, Of Reformation in England*, b. i.

Christianness. *s.* [the *n* doubled in sound as well as in spelling.] Attribute suggested by Christian; profession of Christianity; Christian character of anything. *Rare*.

It is very irregular and unreasonable to measure any action by a rule that belongs not to it, to try the exactness of the circle by the square, which should be done by the compass, and in like manner to judge the *christianness* of an action by the law of natural reason, which can only be judged by its conformity with the law of Christ, superior to that of nature.—*Hammond, Of Conscience*, § 23.

Christianography. *s.* [Gr. *γραφω* = write, describe.] General description of the nations and sects professing Christianity; (in the extract it is the title of a work, and so far a *proper* rather than a *common* name).

In my *Christianography* you may see divers liturgies.—*Paynt, Hecrography*, p. 34.

Christless. *adj.* Without the spirit of Christ.

And a million horrible echoes brake
From the red-ribbed hollow behind the wood,
And thundered up into heaven the *Christless* codo
That must have life for a blow.
Tennyson, Maud, xxi. 1.

Christmas. *s.* [*Christ* and *mass* in the ecclesiastical sense of the word.]

1. Day on which the nativity of our blessed Saviour is celebrated by a particular service of the church.

Canons were made by several councils to oblige men to receive the Holy Communion three times a year at least, viz. at *Christmas*, *Easter*, and *Whit-week*.—*Whedley, Rational Illustration of the Book of Common Prayer*.

2. Season of Christmas; festivity relating to it; twelve days succeeding Christmas-day, i.e. from Christmas-eve to Twelfth night.

At *Christmas* I no more desire a rose,
Than wish a snow in May's new-fangled night;
But like of each thing, that in season grows.
Shakespeare, Love's Labour's Lost, i. 1.

The festivity of *Christmas* was observed much after the same manner, ceremonies, and solemnities, as in Italy.—*E. Broune, Travels in Europe*, p. 153: 1685.

Used adjectivally, or as the first element in a compound.

Here was a consent,
(Knowing beforehand of our merriment)
To dash it like a *Christmas* comedy.

Is not a country a *Christmas* gambol or a tumbling trick?—*Id., Twelfth Night*, induction, ii.

Christmas-box. *s.* Box in which little presents are collected at Christmas; present itself.

When time comes round, a *Christmas-box* they bear,
And one day makes them rich for all the year.
Gay, Trivia.

[That *box* has the ordinary meaning of the word in this compound is clear; the allusions to it as such, in our older literature, being numerous. We know, too, that it was at one time a box of a peculiar kind, being made of earthenware. See Nares by H. and W. in voce.]

Nevertheless the fact of *Yule* being the old word for *Christmas*, and the fact of the equivalents in certain parts of the Continent to the Christmas morris-dancers of England being at the present moment named *Julebok* (the word *bok* having a meaning allied to *bog* or *bogy*, and denoting men in fantastic disguises), a compound which exactly translates *Christmas-bok* (*buck*), suggest the doctrine that the formation, though with a different sense, may be older than the system of Christmas begging, and that one element in its vocabulary may, with a change of meaning, have been transferred from Paganism.]

Christmas-rose. *s.* [two words rather than a compound.] Name of a garden plant which flowers late in December: (not a rose but a ranunculaceous plant, *Helleborus niger*).

Christmas-rose and cyclamen being curious early flowering perennials, and if grown well, may be planted in warm borders and pots.—*Abercrombie, Gardener's Journal*, p. 193.

Christology. *s.* [*Χριστός* = Christ, *λόγος* = discourse.] Department in Theology, which deals especially with the personality and attributes of Christ; discourse or treatise concerning Christ.

The word '*Christology*' a reviewer has lately characterised as a monstrous importation from Germany. I should quite agree with him that English theology does not need, and can do excellently well without it; yet it is not this absolute novelty; for in the preface to the works of that great Arminian divine of the seventeenth century, Thomas Jackson, written by Benjamin Oley, his friend and pupil, the following passage occurs: 'The reader will find in this author an eminent excellence in that part of divinity which I make bold to call *Christology*, in displaying the great mystery of godliness, (and the Son manifested in human flesh.)' *Archbishop Truch, Lectures on the Study of Words*, lect. v.

Chromate. *s.* Salt in which the acid is the chromic, generally that in which the oxide of iron is the base. See *Chrome*.

The only ore of this metal, which occurs in sufficient abundance for the purposes of art, is the octahedral chrome-ore, commonly called *chromate* of iron; though it is rather a compound of the oxides of chromium and iron. The fracture of the mineral is uneven; its lustre imperfect metallic; its colour between iron black and brownish black, and its streak brown. . . . It is infusible before the blow-pipe; but acts upon the magnetic needle, after having been exposed to the reducing smoky flame. It is entirely soluble in borax, at a high blow-pipe heat, and imparts to it a beautiful green colour.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chromatic. *s.* [from the feminine of *χρωματικός*, the word *χρῶμα* = art being understood.] In *Painting*. Colouring. *Rare*.

I am now come, though with the admission of many likenesses, to the third part of painting, which is called the *chromatic*, or colouring. Expression, and all that belongs to the word, is that in a poem which colouring is in a picture.—*Dryden, Translation of Dryden's Art of Painting*.

This is simply the translation of the word *chromatic* in the original. Mason, who translated the same work, and Reynolds, who wrote the notes to it, use the word *Colouring* exclusively.

Chromatic. *adj.* [Gr. *χρωματικός* = relating to, belonging to, or consisting of, the *χρῶμα* = skin, complexion, colour; as the base of the forthcoming series of derivatives, limited to the last sense.]

In *Music*. Applied to one out of the three kinds (genera) of ancient melody; the other two being the Diatonic and Enharmonic.

In modern music, it generally qualifies the words *scale* and *modulation*; with the former denoting a succession of ascending or descending *semitones*, with the latter a succession of descending ones only.

Those harsh *chromatic* jars
Of sin that all our music mays.
Milton, Ode at a Solemn Music, MS. reading.
It was observed he never touched his lyre in such a truly *chromatic* and enharmonic manner.—*Arbuthnot and Pope*.

Music is not designed to please only *chromatic* ears, but all that are capable of distinguishing harsh from disagreeable notes.—*Addison, Spectator*, no. 22.

In Optics. See *extract*.

In the refracting telescopes . . . the different refrangibility of the different coloured rays presents an obstacle to the extension of their power beyond very moderate limits. The focus of a lens being shorter as its refractive index is greater, it follows, that one and the same lens refracts violet rays to a focus nearer to its surface than red. . . . If the paper be held in the focus for mean rays, or between the vertices of the red and violet cones, these will then form a distinct image, being collected in a point: but the extreme, and all the other intermediate rays, will be diffused over circles of sensible magnitude, and form coloured borders, rendering the image indistinct and hazy. This deviation of the several coloured rays from one focus is called *chromatic aberration*.—*Encyclopædia Metropolitana*, *Light*.

Chromatical. *adj.* Same as *Chromatic*.

Why among sundry kinds of music that which is called *chromatical* delighted, enlarged, and joyed the heart, whereas the harmonical contracteth and dwelleth it in, making it sad and clumpty.—*Holland, Plutarch*, p. 1024. (Rich.)

Chromatic. *s.* [*chromatic* in the plural number and the neuter gender, i.e. *χρωματικά*.]

The key to the difference between these two terms is as follows:

(1.) In the form in *-ic*, singular and feminine, the word supposed to be understood is, in accordance with the practice of the Greek language, *χρῶμα*. See *Chromatic*.

(2.) In the form in *-ics*, plural and neuter, we understand the word *βιβλία* = books or treatises; most of which are in reality, or are supposed to be, works of Aristotle's.

Each form has been so far extended beyond the actual Greek use, or the range of Aristotle's writings, as to be little more than an etymological fiction. The difference, however, indicated gives us a clue to the difference of form.]

In Optics. Division of the subject which treats of colours.

The science which examines and explains the various properties of the colours of light and of natural bodies, and which forms a principal branch of optics, has been properly denominated *chromatics*, from the Greek word *χρῶμα*, which signifies colour.—*Rees, Cyclopædia*, *Colour*.

We shall . . . occupy our limited space with the more interesting departments of *chromatics*, physical optics, the double refraction and polarisation of light, &c. *Encyclopædia Britannica*, *Optics*.

Chromatometer. *s.* [Gr. *χρῶμα* + *μέτρον* = measure.] Serle for measuring colour.

But this difficulty was removed by a curious discovery of Willaston and Fraunhofer; who found that there are, in the solar spectrum, certain fine black lines which occupy a definite place in the series of colours, and can be observed with perfect precision. We have now no uncertainty as to what coloured light we are speaking of, when we describe it as that part of the spectrum in which Fraunhofer's line c or d occurs. And thus, by this discovery, the prismatic spectrum of sunlight became, for certain purposes, an exact *chromatometer*.—*Whewell, History of Scientific Ideas*, l. 341.

Chrome. *s.* English form of *chromium*: used, however, with greater latitude, so as to signify minerals in general in which chrome is the chief element; i.e. certain *Chromates*.

There is another application of *chrome* which merits some notice here; that of its green oxide to dyeing and painting on porcelain.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chrome-yellow. *s.* See extract.

Chromate of lead, the *chrome-yellow* of the painter, is a rich pigment of various shades from deep orange to the palest canary yellow. — *Use, Dictionary of Arts, Manufactures, and Mines.*

Chromium. *s.* [Gr. *χρῶμα* = colour, on account of the beautiful reds and yellows of some of its ores. The *-um* belongs to the language of *Chemistry*, and indicates its metallic character.] Metal so called.

Discovered in the year 1797 by Vauquelin in a beautiful red mineral, the native dichromate of lead. It has since been detected in the mineral called chromate of iron, a compound of the oxides of chromium and iron. — *Turner, Elements of Chemistry*, in voce.

Chronio. *adj.* [Gr. *χρονικός* = relating to, consisting in, *χρόνος* = time.] Taking time for operation or action; slow.

Chiefly used in *Medicine*, in opposition to *Acute*: though it is only in extreme or distant instances that the contrast is strongly marked. When applied to subjects not strictly medical, as in such expressions as 'this condition' or 'state of things became chronic,' it has a bad sense; our attention being fixed not so much upon the difference of intensity which, taken by itself, makes a chronic disease milder than an acute one, as upon the unfavourable character of its permanence.

Acute and *chronic* inflammation. . . . What do they mean? Is acute inflammation different from *chronic* in kind? No, they differ only in degree. . . . Now in respect to intensity and duration, there are innumerable shades of difference in different cases of inflammation. . . . We feel no uncertainty about those cases which occupy the two degrees of the scale; but with regard to those which lie in the middle we are often at a loss. To meet this difficulty some pathologists have invented a third epithet, viz. sub-acute, intending to designate thereby cases which hold an equivocal rank, which are neither decidedly acute nor plainly *chronic*. — *Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Chronical. *adj.* Chronic: (which is now the common form).

A *chronical* distemper is of length; as dropsies, asthmas, and the like. — *Quincy.*

It was a principle among the ancients that acute diseases are from heaven and *chronical* ones from ourselves. — *Johnson, Rambler*, no. 83. (Rich.)

Chronicle. *s.*

1. Annual, or account of events in order of time.

No more yet of this;

For 'tis a *chronicle* of day by day,

Not a relation for a breakfast.

Shakespeare, Tempest, v. 1.

2. History.

You lean too confidently on those Irish *chronicles*, which are most fabulous and forged. — *Spenser, View of the State of Ireland.*

If from the field I should return once more,
I and my sword will vary our *chronicle*.

Shakespeare, Antony and Cleopatra, iii. 11.
I give up to historians the generals and levies which crowd their annals, together with those which you are to produce for the British *chronicle*. — *Dryden.*

The difference between the *Chronicle* and the *History* is clear and distinct in extreme cases only. In a bare record of events in the order of succession we have the *chronicle* in its typical form, which a little colouring, some representation of character, and a few philosophic reflections convert into a history; whilst a history with these elements at a minimum is little more than a *chronicle*.

A *Chronicle* in which events are recorded as they happen, so that each entry is cotemporary with its event, is a Register. Where there is neither cotemporary record, nor clue to any original evidence, we have the fabulous or unhistorical *Chronicle*, a species of composition to which the term can scarcely be applied with strict propriety. Yet it is common with the older writers e.g. *Spenser* and *Raleigh*, as in the extracts. With these, however, there was

a vague and partial belief in the historical authenticity of some portion, at least, of what they so denominated. The extract from Craik tells us to what class of works the term best applied; and, of these, many were called *Chronica*, some *Gesta*, and some *Historie*. For further remarks see *Chronographer*.

Chronicle. *v. a.* Record in chronicle or history.

This to rehearse, should rather be to *chronicle* times than to search into reformation of abuses in that realm. — *Spenser, View of the State of Ireland.*

O, would the devil were good!

For now the devil, that told me I did well,

Says that this deed is *chronicled* in hell.

Shakespeare, Richard II. v. 6.

Love is your master; for he masters you:

And he that is so yoked by a fool,

Methinks, should not be *chronicled* for wise.

Id., Two Gentlemen of Verona, i. 1.

I shall be the jest of the town; nay, in two days I

expect to be *chronicled* in ditty. — *Congreve.*

Chronicler. *s.* Writer of chronicles.

Here *antient chroniclers*, and by them stand

Giddy fantastick poets of each land. — *Dunne.*

A historian, then, as so understood, may, in the first place, be looked upon as a *chronicler* and recorder of contemporary events, of which he is either a direct and personal witness, or of which he collects the evidence himself from original witnesses. — *Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. v.

I do herein rely upon these *Irish chroniclers*. — *Spenser, View of the State of Ireland.*

Statesmen, men of business, men of war, must begin to relate the affairs of states, the adventures and events of war. For the perfect *chronicle* we must

await Villehardouin, Joinville, Froissart, Villani is more than a *chronicler*; he is approaching to the

historian. — *Mitau, History of Latin Christianity*, b. xiv. ch. vi.

By habitual intercourse with all dealers in political wares, from the chiefs of parties and their more refined coteries to the providers of daily discussion for the public and the *chroniclers* of parliamentary

speeches, he trained himself to a facility of speaking, absolutely essential to all but first-rate geniuses, and all but necessary even to that. — *Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, *Strictures.*

The earliest of our English *chroniclers* or annalists, properly so-called, who wrote after the Norman conquest is held to be Florence of Worcester, whose work, entitled *Chronicon ex Chronicis*, was printed in 4to at London in 1562. . . . It extends from the Creation to the year 1119, in which the author died, and there is printed along with it a continuation by another writer to the year 1141. It is, for the greater part, a transcript from the notices of English affairs contained in the General History or Chronology which bears the name of Marianus Scotus. . . . The principal value of Florence's performance in fact consists of its serving as a key to the [Anglo-Saxon] *Chronicle*. . . . [William of] Malmesbury. . . . stands next in order of time after Bede in the series of our historical writers properly so-called, as distinguished from mere compilers and diarists. . . . [Geoffrey of Monmouth's work] professes to be a translation of a Welsh *Chronicle*. . . . His Latin is much more agreeable than that of the generality of monkish *chroniclers* of his time. . . . [The work of Henry of Huntingdon] is a more ambitious attempt than had been made by such mere annalists as the Saxon *chroniclers* on one side, and such compilers as Florence of Worcester and Simon of Durham on the other. . . . Hoveden takes up the narrative at the year 732, where the history of Bede. . . . ends, and brings it down to 1202. . . . Hoveden is, of all our old *chroniclers*, the most matter-of-fact man. — *Craik, History of English Literature*, i. 79-80.

Chronique. *s.* [Fr.] *Chronicle*. *Obsolete*

though the closer form, the Latin (Greek)

being *chronicon*.

The best *chronique* that can be now compiled of their late changes must for the most part be collected from some aged grandfathers' memory; a frail foundation to support an historical credit. — *L. Addison, Description of West Barbary*, p. 74.

Chronogram. *s.* [Gr. *χρόνος* = time, *γράμμα* = writing.] Inscription including the date

of any action, sometimes definitely, some-

times in the way of an anagram (of which

see an example under next entry).

The Spaniards took it [Breda] again, as by inscriptions and *chronograms* are to be seen in divers

places. — *E. Browne, Travels in Europe*, p. 103: 1588.

He may apply his mind to heraldry, antiquity; —

make epithalamiums, &c., anagrams, *chronograms*,

acrosticks upon his friends' names. — *Burton, Anatomy of Melancholy*, p. 282.

Chronogrammatical. *adj.* Belonging to a

chronogram.

'Gloria lausque Deo, *see* *ChorVM* in *see* *Via aucto.*' A *chronogrammatical* verse, which includes not only this year 1860, but numerical letters enough to reach above a thousand years further, until the year 2867. — *Howell.*

Chronogrammatically. *adv.* In the manner of a *Chronogram*.

These elegies and epitaphs are printed in several forms, some like pillars, some circular, some *chronogrammatically*. — *Wood, Athenæ Oxonienses*, ii. 111. (Ord MS.)

Chronogrammatist. *s.* Writer of *chronograms*.

There are foreign universities, where, as you praise a man in England for being an excellent philosopher or poet, it is an ordinary clamor to be a great *chronogrammatist*. — *Addison, Dialogues on the Usefulness of ancient Methods.*

Chronographer. *s.* Chronologist.

The common printed *chronicle*. . . . is indeed but an epitome, or abridgement, made by Robert of Lorraine, and the numerous rest of our monkish and superstitious *chronographers*. — *Selden, On Drayton's Polyglot*, pref.

Though the distinction between words in *-ography* and *-ology* is rarely so clear as in Geography and Geology, it is always worth recognizing; the general fact being that the former apply to works wherein the description on record is pure and simple, the latter to those wherein criticism or philosophy is superadded. If so, *Chronography* is scarcely an obsolete synonym for *Chronology*. Nor, when in use, was it considered as such; indeed, at that time, Chronology in its present sense, was in its infancy. It was more nearly equivalent to *Chronicle*, as exemplified in the extract from Craik given under that entry; the result of a series of *chronographers* being a *Chronography*, a word which, doubtless, is to be found, but one for which the editor is not prepared with an instance.

Chronologer. *s.* Chronologist.

This publication [his *chronology*], bearing the name of the immortal Newton, though highly built upon by subsequent *chronologers*, is so unspokeably inferior to that great man's other works, that I am almost unwilling to believe its authenticity; and can hardly be persuaded he ever would have published it himself. — *W. Richardson, On the Language and Manners of the East*, i. 1.

Chronologic. *adj.* Denoting periods of time.

The *chronologic* classing of those histories which my most sanguine wishes went to. — *Pownall, Treatise on the Study of Antiquities*, p. 127.

Chronological. *adj.* Relating to *chronology*.

Thus much touching the *chronological* account of some times and things past, without confining myself to the exactness of years. — *Sir M. Hale, Originations of Mankind*.

Chronologically. *adv.* In a chronological manner; according to the laws or rules of chronology; according to the exact series of time.

Follow them politically, *chronologically*, and geographically. — *Lord Chesterfield.*

Chronologist. *s.* One who studies or explains time; one who ranges past events according to the order of time.

According to these *chronologists*, the prophecy of the Rabin that the world should last but six thousand years, has been long disproved. — *Sir P. Browne, Vulgar Errors*.

All that harned noise and dust of the *chronologist* is wholly to be avoided. — *Locke, Thoughts concerning Education*.

Chronology. *s.* Science of computing and adjusting periods of time, and referring each event to its proper year; study of dates.

And the measure of the year not being so perfectly known to the ancients, rendered it very difficult for them to transmit a true *chronology* to succeeding ages. — *Holder, Discourse concerning Time*.

Where I allude to the customs of the Greeks, I believe I may be justified by the strictest *chronology*; though a poet is not obliged to the rules that confine an historian. — *Prior.*

Chronometer. *s.* [Gr. *μέτρον* = measure.]

1. Instrument furnishing a more exact mea-

sure of time than that given by ordinary clocks and watches, the effects of change of temperature being particularly guarded against: (used chiefly at sea and in observatories.)

According to observation made with a pendulum chronometer, a bullet, at its first discharge, flies five hundred and ten yards in five full seconds.—*Derham*.

In general chronometers are much larger than common watches, and are hung in cabinets in boxes, six or eight inches square, but there are also many pocket chronometers. . . . The balance and hairspring are the principal agents in regulating the rate of going in a common watch. . . . This spring . . . is subject to expansions and contractions under different degrees of heat or cold, which of course affect the rate of speed of the machine. It is the method of correcting this inaccuracy which marks the difference between the watch and the chronometer.—*Encyclopædia Metropolitana*, in voce.

2. In Music. See extract.

An instrument under the . . . name *chronometer* is also used by musicians for the accurate measurement of time. Two sorts have been invented for different purposes. The first supplies the motion of the conductor, and regularly beats time. . . . The second is used by tuners of instruments to measure the velocity of beats.—*Encyclopædia Metropolitana*, in voce.

Chrysalis. s. [Gr. χρῖσας = from the golden, or rather auburn, colour of some of them. The plural form is generally avoided in writing; it being doubtful how far the word is naturalized, and therefore whether *chrysalises* or *chrysalides* is the truer form. The Latin equivalent is *Aurelia*, of which either plural (*aureliæ* or *aurelius*) is more convenient; besides which we have the derivative *Aurelians*, applied to the collectors of butterflies.]

Same as Pupa, itself a technical, though necessary, name; i.e. insect during the stage between that of a larva or caterpillar, and that of an imago or perfect insect. As a general term, it is applicable to all insects; though for particular groups certain other terms are used.

It is used most generally in speaking of the Lepidoptera, or moths and butterflies; though, as it applies to both the insect and the case or covering, other terms are occasionally more current: e.g. when the covering is easily distinguished from the insect, as in the pupa of the silkworm, we use the word *Cocoon*. Hence, saving some exceptions, the word may be defined as the general term for lepidopterous insects during the stage between that of the larva and the imago. The adjectival construction, as 'in the *chrysalis* stage,' is common.

Courage, St. Simeon! This dull *chrysalis* Cracks into shining wings, and hope ere death Spreads more and more and more, that God hath now

Sponged and made blank of criminal record all My mortal archives. *Tennyson, St. Simeon Stylites*. "Here it is not, as in the egg or the *chrysalis*, merely the change of a fixed quantity of matter into a new shape, but where, as in the growing plant or animal, we have an incorporation of matter existing outside, there is still a pre-existing external force at the cost of which this incorporation is effected."—*Herbert Spencer, The Correlation and Equivalence of Forces*.

Chrysanthemum. s. [Gr. χρῖσας = gold, ἀνθ- = flower.] Exotic flower (C. sinense), often and perhaps originally yellow, but now falling into varieties of almost every colour: (the native *chrysanthemum*, the word being used in its botanical sense and as a generic name, are the corn-marigold and the oxeye, C. segetum and C. Leucanthemum).

No plant is more easily propagated and cultivated than the *chrysanthemum*. The root may be divided, suckers may be taken off, and cuttings taken at any season of the year or any period of the plant's growth.—*London, Encyclopædia of Gardening*, in voce.

Chrysoberyl. s. [Gr. χρῖσας = gold, βήρυλλος,

Lat. *beryllus* = beryl.] Aluminous mineral so called.

Chrysoberyl [is] unchanged before the blowpipe. With borax and salt of phosphorus fuses slowly, and with difficulty, into a clear glass. . . . Is not acted upon by acids.—*W. Phillips, Elementary Introduction to Mineralogy*.

Chrysolite. s. [Gr. χρῖσας = gold, λίθος = stone.—the termination *-lith* would be better; and in *monolith* it has been adopted: but, on the other hand, *coprolite*, a newer word and one of scientific coinage, is spelt with *-te*.] Precious stone of a dusky green, with a cast of yellow; variety of Olivine.

Such another world, Of one entire and perfect *chrysolite*, I'd not have sold her for. *Shakspeare, Othello*, v. 2. If metal, part seem'd gold, part silver clear: If stone, embrace most, or *chrysolite*.

Milton, Paradise Lost, iii. 595. The green transparent variety, *chrysolite*, is found in Egypt, Natalia, and the Brazils. *W. Phillips, Elementary Introduction to Mineralogy, Olivine*.

Chrysophilite. s. [Gr. χρῖσας = gold, φίλος = love.] Lover of gold. *Rhetorical, rare*.

The passion for wealth has worn out much of its grossness in tract of time. Our ancestors certainly conceived of money as able to confer a distinct gratification in itself, not considered simply as a symbol of wealth. The old poets, when they introduce a miser, make him address his gold as his mistress; as something to be seen, felt, and hugged; as capable of satisfying two of the senses at least. The substitution of a thin, unsatisfying medium in the place of the good old tangible metal, had made advance quite a Platonic addition in comparison with the seeing, touching, and handling pleasures of the old *Chrysophilite*.—*Lamb, Essays of Elia, Characters of dramatic Writers*, Ben Jonson.

Chrysoprase. s. [Gr. χρῖσας = gold, πρᾶσιον = leaf, from its colour.] Siliceous mineral so called, i.e. variety of Chalcedony.

Chalcedony . . . is called carnelian when of a red, yellow, or brown colour; plasma when dark green; *chrysoprase* when of an apple-green colour, produced by an admixture of one per cent. of oxide of nickel.—*W. Phillips, Elementary Introduction to Mineralogy, Quartz*.

Chrysoprasus. s. Latin form of *Chrysoprase*.

The nintha topaz, the tenth a *chrysoprasus*.—*Revelation*, xxi. 20.

Chub. s. [Zoological Latin, *Cyprinus Cephalus* Linnaeus, *Leuciscus Cephalus* Fleming. Besides *ceph-alus* we find, in ordinary as opposed to scientific Latin, the equivalent term *cap-ito*. From either of these *chub* may be derived. Word for word, the nearest approach to it in the languages of the German family is *hibbs*, a provincial term; and one which, supposing the name to have come from Germany, connects it with *kopf* = head. Another complication is suggested by *kufir*, which Nennich gives as a Tatar name. Could we suppose the word to have come from this, the connection with *head* would be done away with and many difficulties avoided. The Turkish *küfer*, however, is the Sparus Salpa.

In favour of the appropriateness of a derivation from *caput* little can be said; the most being that the figure of the chub tolerates, without in the slightest degree requiring, the application of a name derived from the size of its head. Yet the French *chevin* from *chef* has the same origin; and so have the Italian *capitone*, the Spanish *cabezudo*, and the Portuguese *cabeçudo*; not to mention *dickkopf*, *dikhop*, and *hard-kopf* in German and Dutch.

Yarrell, saying nothing about the head, gives a second name, *skelly*.

'The chub . . . is the *skelly* of the rivers of Cumberland, so called on account of the large size of its scales; but not the *skelly* of Ulswater Lake; . . . the *chub* is the *chevin* of Ulswater Lake, where the gynoid or fresh-water hering is called the *skelly*, pronounced *skelby*; but the term *skelly* with reference to its scales belongs par excellence to the *chub*, whose scales

are large, opaque, and strong like those of a carp.' (Yarrell, *British Fishes*.)

Upon what is, perhaps, the most natural character of the chub, the wattles of the jaw, the term *mundfisch* (mouthfish) can just be said to exist as a provincial name in Germany.

The common freshwater fish to which a name taken from the head most specially applies is the bullhead or miller's thumb (*Cottus Gobio*); and, as this is the freshwater fish which was first called *capito*, it is the opinion of the editor that the name of the bullhead has been transferred to the chub; the mouth, as a character, being substituted for the head. Confirmatory of this view is the fact that, whilst in our own language miller's thumb is another name for the bullhead, *meunier* in French and *molinero* in Spanish, words meaning miller, are given (see Nennich, *Cyprinus Joses*) as synonyms of *chevin* and *cabezudo*. See also Goby and Gudgeon.] Freshwater fish so called; chevin.

Chondrogaster differ among themselves about most great qualities.—*Holzer, Discourse concerning Time*. The chub is in prime from Midway to Christmas, but best in winter. He is full of small bones; he eats waterish; not firm, but flup and tasteless; nevertheless, he may be so dressed as to make him very good meat.—*J. Walton, Complete Angler*.

Chubby. adj. Well covered with healthy and florid flesh, especially on the face.

Decidedly, like a *chubby* child in high health, with a whitlow.—*Colman the younger, The Poor Gentleman*, iv. 2.

The rapidist stood near the inn at the wheel, with a tainted air; his wife was near him, and Miss Drumma, a fine *chubby* young lady, of the Dutch tulip style, with a parrot as big as a chandy's umbrella, was gazing on her papa with admiration.—*Honany, Singleton East*, vii. b. ii. ch. i.

Chubbyfaced. adj. ? Having a chubby face; ? having a face like a chub.

I never saw a fool lean; the *chub-faced* top Slithers sleek with full-crowned fat of happiness.—*Martinet, Antonio's Revenge*.

Mr. Fellows, you take me, I suppose: black eyes, white skin, and such an ankle!' and the fellow rubbed her great hands and *chuckled*.—*Sir E. L. Bulwer, Pelham*, ch. xxiii. Peter *chuckled* only at the corporal's displeasure, and continued as in an apologetic tone.—*Id., Eugene Aram*, b. i. ch. xi.

2. Cocker; fondle.

Your confessor, that parcel of holy guts and garbidge; he must *chuckle* you, and mean you.—*Dryden, Spanish Friar*.

Chukking. part. adj. [probably an adverb formed like Darkling and Groveling out of an oblique case, from which an imaginary, hypothetical, or catachrestic verb has been developed. In the following extract it is *adverbial*:

'And when the Pardoner them espied, he gan to sing,
Double me this burden, *chukking* in his throat,
For the Tapster should here of his merry note.'
(Chaucer.)

i.e. in the way of one having something in his throat that he had a struggle to get upwards.]

Inward expression of satisfaction by a suppressed choking approach to a laugh.

'Fore Gad, you are in the right, Mr. Pelham,' replied Thornton, with a loud, coarse, *chukking* laugh, which, more than a year's conversation could have done, let me into the secrets of his character.—*Sir E. L. Bulwer, Pelham*, b. i. ch. xi.

Chuet. s. [? Fr. *chuet* = owl; ? A.S. *ceo* = chough; ? German, *kibitz*, *kiewit* = peewit.] For meaning see remarks on the following extract.

Rebellion lay in his way, and he found it.—*Peace, cheer, peace*!—*Shakespeare, Henry IV. Part I. v. 1*.

[The term is applied by Prince Henry to Falstaff; hence the notion that it means *chuet* the viand, even *suet* has been entertained. Assuming it, however, to mean a bird, what bird is meant? The *chuet* from the French *chuet* is one of the scariest of the English owls, the Scops Aldrovandi, or Little Horned Owl, as may be seen from the following extract representing the opinion of two authorities:

'This little tufted owl . . . is so rare that little has been observed of its habits here [in Great Britain]. . . . In France it is not uncommon, and is said to appear and depart with the wind low. Advancing southward to the shores and islands of the Mediterranean, it is even plentiful; and Mr. W. Spence . . . has thus recorded its summer habits. "This owl, which in summer is very common in Italy, is remarkable for the constancy and regularity with which it utters its peculiar note or cry. It keeps repeating its plaintive and monotonous cry of "*kew kew*" (whence its Florentine name of *chui* pronounced almost exactly like the English letter Q) in the regular intervals of about two seconds the livelong night; and, until one is used to it, nothing can well be more wearisome." (Yarrell, British Birds.)

That *chough* may mean a chattering bird (*daw* or *pie*) has been already suggested. But neither of *chough* nor *ceo* can *chuet* be considered a diminutive.

The editor suggests that the bird meant is the Lapwing, or Peewit, and that it is the German *kiewit* with which it is the most closely connected as a word.

Another Italian name for this particular species is, according to Nennich (who also gives *chue*) *cinino*; the brown owl being the *civetta* and the French *chouette*. Altogether the word is used with considerable latitude; the true *chuet*, however, is Scops Aldrovandi, and, as it is an owl that screeches, the true *screechowl* also. The English screechowl is properly a *strich-owl*, i.e. *Strix Ulula*. See *Screechowl*.]

Chuff. s. [see Coof.] Coarse, fat-headed, blunt clown.

Hang ye, porcellous knaves, are you undone?—No ye fat *chuffs*, I would your store were here.—*Shakespeare, Henry IV. Part I. ii. 2*.

A less generous *chuff* than this in the fable would have hugged his bags to the last.—*Sir R. L. Estlin*.

1. Collective body of Christians, usually termed the Catholic Church.

The *church* being a supernatural society, doth differ from natural societies in this; that the persons into whom we associate ourselves in the one, are men, simply considered as men; but they to whom we be joined in the other, are God, angels, and holy men.—*Hooker*.

2. Body of Christians adhering to one particular opinion or form of worship.

The *church* is a religious assembly, or the large fair building where they meet; and sometimes the same word means a synod of bishops, or of presbyters; and in some places it is the pope and a general council.—*Watts, Logic*.

3. Place which Christians consecrate to the worship of God.

It comprehends the whole *church*, viz. the nave or body of the *church*, together with the *chancel*, which is even included under the word *church*.—*Ayliffe, Parergon Juris Canonici*.

Church-bell. s. Bell for a church.

I reached the White Lion, and began my inquiries amidst the ringing of bells, which distracted me, but of which I subsequently found myself the unconscious cause. Remember, I don't mean house-

bells, for the White Lion boasts no such luxury—I mean the *church-bells*, which were set going in their merriest peals to do me honour, for which, in the sequel, I found one panned one shilling set down in the bill under the head of 'merriness'; but a little what is worth paying for, if one have but the money.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. ii.

Sing here, beneath the shingle,
That half-mad think of widdy rhymes
Which you last April made!'

Unity in the fundamental articles of faith was always strictly insisted upon as one necessary condition of *church-membership*; and if any man openly and so lately opposed those articles, or any of them he was rejected as a deserter of the common faith, and treated as an alien.—*Waterland, Discourse of Fundamentals*, Works, viii. 90.

Church-musical. s. Music adapted for use in churches and cathedrals.

It was unbecomingly customary for men and women of the first quality, cavaliers, and others, who were lovers of *church-musick*, to be admitted into this corporation [of parish-clerks].—*T. Warton, History of English Poetry*, ii. 390.

The parson snickered and nodded.

Tempsam, The Goose.

Churchgoer. s. Regular attendant at church.

And yet, such as the advantage of external show,

and such the value of appearances, that being only a regular church-goer gives the hypocritical sinner a tenfold advantage in society over the infinitely more innocent individual who is not so constant in his attendance on divine service, but whose heart is perhaps more often communing with his God.—*Thendore Cook, Gilbert Garney, vol. II, ch. iv.*

Churchgoing, adj. Culling to church; appealing to churchgoers.

But the sound of a churchgoing bell
These rocks and these valleys ne'er heard;
Never sighed at the sound of a knell,
Or smiled when a Sabbath appeared. *Coeper.*

Churching, verbal abs. Act of performing the office appointed by the Church for the thanksgiving of women after childbirth.

The absurdity, which some would introduce, of stifling their acknowledgments in private houses, and in giving thanks for their recovery and enlargement in no other place than that of their confinement and restraint, is a practice inconsistent with the very name of the office, which is called the churching of women, and consequently implies a ridiculous solecism of being churchied at home. *Wheatley, National Illustration of the Book of Common Prayer.*

Churchlike, adj. Befitting, or after the manner of, a churchman.

Nor shall proud Lancaster usurp my right,
Nor hold his scepter in his childish fist,
Nor wear the diadem upon his head,

Tennyson, Maud, xiv. 2.

2. Member of the Established Church, as opposed to Dissenters and Separatists.

He was a churchman, but of the most subdued description, as far removed from Oxford as from Rome; and looked not quite unfavourably on the heresies of the two brothers Wyclif, and a certain Whitfield, then smiling ground considerably.—*Sala, The Ship-Chandler.*

Churchmanlike, more rarely Churchmanly, adj. Like a churchman.

This indeed, could be but the lot of few; and there might in the lower orders be much envy and jealousy of those who rose from their ranks to the height of churchmanlike dignity, as well as pride and emulation to vie with their success.—*Milman, History of Latin Christianity, b. xii, ch. l.*

Churchrate, s. Rate levied in a parish for the repairs of the church.

Church-rates are not a property: they are of a different nature. They arise out of the right and power which every parish has, like a free republic, to tax itself and to impose political duties on its own inhabitants.—*Lord R. Moulton, The Four Experiments in Church and State, p. 88.*

Churchship, s. Institution of the Church.

The Jews were his own also by right of churchship, as selected and inclosed by God, from amidst all other nations, to be the seat of his worship, and the great conservatory of all the sacred oracles, and means of salvation.—*South, Sermon on John i. 11.*

church, and commonly used as a place of burial, though not originally intended for that purpose.

I am almost afraid to stand alone
Here in the churchyard, yet I will adventure.

Shakespeare, Romeo and Juliet, v. 3.
In churchyards, where they bury much, the earth will consume the corpse in far shorter time than other earth will.—*Bacon.*

As to the original of burial places, many writers have observed that, at the first erection of churches, no part of the adjacent ground [churchyard] was allotted for the interment of the dead; but some place for this purpose was appointed at a further distance. This practice continued until the time of Gregory the Great, when the monks and priests procured leave, for their greater ease and profit, that a liberty of sepulture might be in churches or places adjoining to them.—*Hook, Church Dictionary.*

With the accent on the second syllable.

No place so sacred from such tops as hard;
Nor is Paul's church more safe than Paul's churchyard. *Pope.*

The chyle cannot pass through the smallest vessels.—*Arbuthnot.*

I will notice first some Greek imitations. . . . I will now pass on to the Latin, dealing with all as such, whose terminations are such, and Greek though they may be, have come to us through the Latin. *Chylus* is frequent in *Bacon* ('Mists, smoke, vapours, chylus in the stomach.'—*Natural History*, cent. ix. § 837), and, if the examples of *chyle* in our dictionaries are the earliest, preceded it by at least half a century. *Jackson* uses *chylus*; *Baxter* and *Henry More* archive; *Worthington* distribut; *Jermyn Taylor* expanum; *Fuller* interstitia; *Chillingworth* intervalia; *Henry More*, nuchina; 'culverwell, philtrum; *Barton*, spectrum. *Mummy*, not a Latin word, but coming to us through the low Latin, appears for some times *mummy*, still wearing its Latin dress. *Archbishop Trench, On some Deficiencies in our English Dictionary*, pp. 20-23.

(See also extract under *Chyma*.)

Chylification, s. [Lat. *factus* = made, participle of *facio* = make.] Act or process of making chyle in the body.

Chylification. *s.* Conversion of food into chyle.

Nor will we affirm that iron is indigested in the stomach of the ostrich; but we suspect this effect to proceed not from any liquid reduction, or tendence to *chylification*, by the power of natural heat.—*Sir T. Browne, Vulgar Errors.*

The want of nutrition and chylification.—*Cheyne, Philosophical Conjectures*, disc. 1. (Ord MS.)

Chylifactory. *adj.* Reducing chyme to chyle.

We should rather rely upon a *chylifactory* menstruum, or digestive preparation drawn from species or individuals, whose stomachs peculiarly dissolve lapideous bodies.—*Sir T. Browne, Vulgar Errors.*

Chylopoietic. *adj.* [χρυστικός = having the power of making, from *χρῆσις* = make.] Having the power, or function, of forming chyle; (the common term, though *physiological* rather than general).

According to the force of the *chylopoietic* organs, more or less chyle may be extracted from the same food.—*Arbuthnot.*

The organ so denominated is found, in most ovine fishes, in the form of an elongated bladder, trusely filled by air, extending along the back of the abdomen, between the kidneys and the *chylipoietic* viscera, and sometimes beneath the caudal vertebrae to near the end of the tail.—*Owen, Anatomy of Vertebrates.*

Chylous. *adj.* Consisting of chyle; partaking of chyle.

Milk is the *chylous* part of an animal, already prepared.—*Arbuthnot.*

Sometimes urine is voided which appears to contain chyle. It looks white and milky, and stitious as it cools into a tremulous jelly like blanc manger, and takes the shape of the vessel into which it was passed. . . . Of this rare disease I have met, not a single instance. . . . Mr. Thomas informs me that during a residence of ten years in Barbadoes he saw at least a dozen well-marked examples of *chylous* urine in negroes.—*Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Chyme. *s.* [Gr. *χυμος* = juice.] In *Physiology*. Semifluid matter which passes from the stomach into the duodenum, and yields the chyle by admixture with the biliary secretion; digested aliment as it is in the stomach and upper part of the duodenum.

The animal fluids and other substances are, in fact, undergoing a constant series of changes. Food becomes *chyme*, and *chyme* becomes *chyle*; *chyle* is poured into the blood; from the blood secretions take place, as the bile; the bile is poured into the digestive canal, and a portion of the matter previously introduced is rejected out of the system.—*Whewell, History of Scientific Ideas*, II. 206.

Chyme may give as many derivatives as *chyle*. The only common one, however, is Chymification.

Chymical, Chymist, &c. See Chemical, Chemist, &c.

Cicatrice. *s.* [Lat. *cicatrix*.] *Rare.*

The *cicatricula*, which is the part where the animal first begins to show signs of life, is not unlike a vetch, or a lentil, lying on one side of the yolk, and within its membrane. *Graham, History of the Earth and Animated Nature*, I. 303. (Ord MS.)

Cicatrix. *s.* [Lat. *cicatrix*; hence the accent should be on the second syllable; but in Surgery, where the term is common, it is generally placed on the first, and, if rightly, the word must be considered as naturalized, like *orator* and *scutator*, which are in the same predicament.] Mark left after the healing of a wound or ulcer.

The central part of the diseased spot is converted into a substance resembling cartilage; and the appearance it presents is called a *cicatrix*; and really it deserves that name.—*Wilson, Lectures on the Principles and Practice of Physic*, lect. lvi.

Cicatrization. *s.*

1. Formation of a cicatrix.

The apothecary, or chirurgeon, giveth with a cruel bill, the lately *cicatrized* wound a new gash.—*Moral State of England*, p. 51; 1670.

Cicely. *s.* (pronounced as a dissyllable, and probably considered by the few who use it, especially when preceded by the adjective *sweet*, to be the proper name of a young woman applied to a plant. It is in reality a modification of the word *sescil*, and immediately of Latin or Greek origin, but remotely belonging to some unknown language.)

Indigenous plant, so called: (according to Gerard one of the chevils; but the true *Seseli* is the *Seseli* (Athamanta) Libanotis, for which the English term is said to be Mountain Stone-parsley. It is nearly extinct as a native plant; the editor writing this with, probably, one of the last specimens, gathered in 1840 from one of the last localities, before him. Sweet *Cicely* is the *Myrrhis odorata*, also a scarce plant.)

The smell of *sweet cicely* attracts bees; and the insides of empty hives are often rubbed with it before placing them over newly cast swarms, to induce them to enter.—*London, Encyclopædia of Gardening*, § 4723.

Cicerone. *s.* pl. *ciceroni*. [Italian.—see last extract.] Guide.

One of the greatest venturers a curious person experiences in travelling through Spain, is the scarcity, the non-existence, of tolerable *ciceroni*; those you meet with are generally cobblers, who throw a brown cloak over their ragged apparel, and conduct you to a church or two, where they cannot give you the least satisfactory information concerning antiquities or curiosities.—*Stiebel, Travels through Spain*, let. 37.

I must own to you it surprised me to see my *cicerone* so well acquainted with the busts and statues of all the great people of antiquity.—*Addison, Dia-*

logue on the Usefulness of ancient Medals, dial. 1. (Ord MS.)

An army of virtuous, medalists, *ciceroni*. Royal Society men, schools, universities, even florists, free-thinkers, and free-masons, will encompass me with fury.—*Pope, To Mr. Beckett-Raffad*, p. 259. (Ord MS.)

He was disappointed—rather amazed; but Madame Colonna having sent for him to introduce her to some of the scenes and details of Eton life, his vexation was soon absorbed in the pride of acting in the face of his companions as the cavalier of a beautiful lady, and becoming the *cicerone* of the most brilliant party that had attended Maitland.—*Disraeli the younger, Coningsby*, b. I. ch. II.

How little the modern Italians live in the spirit of their ancient worthies, or reverence the greatest among them, we may argue from the fact that they have been content to take the name of one among their nobles, and degrade it so far that every glib and loquacious hireling who shows strangers about their picture-galleries, palaces, and ruins, is termed by them a *cicerone*, or a *Cicero*.—*Archbishop Trench, Lectures on the Study of Words*, lect. III.

Cicurate. *v. a.* [Lat. *cicurate*, part. of *cicuro* = tame.] Tame; reclaim from wildness; make tame and tractable. *Rare.*

Ciliary. *adj.* [Lat. *ciliaris*.]

1. [from *cilium* = eyelash, eyelid, and also the second element in super-*cilium* = eyebrow and lower part of the forehead; its derivatives being inaccurately extended to several other parts connected with the eye; in the following extracts to parts within the eyeball.] Consisting of fibrous or hairlike elements; arranged like hairs or fringe.

a. Applied to certain processes at the junction of the choroid and the crystalline lens.

The *ciliary* processes, or rather the ligaments, observed in the inside of the sclerotic tunicle of the eye, do serve instead of a muscle, by the contraction, to alter the figure of the eye.—*Ray, Wisdom of God manifested in the Works of the Creation*.

b. Applied to a small muscle by which the form of the lens of the eye is adjusted to the difference of distance between the eye and the object seen.

The single eye has two properties which jointly serve the purpose of indicating the distance of an object from the eye. The one is a property of the retina; the other of the muscles of the eyeball, and of the *ciliary* muscle in particular. . . . Of the muscles of the eye, the *ciliary* muscle plays the most important part in the determination of distance. By its contraction the crystalline lens is brought slightly nearer to the cornea. *Angley, Introduction to Metaphysics*, pt. i. h. l. § 12-13.

Cinchona. *s.* [see extract.] Refrigrif bark obtained from certain trees of the genus *Cinchona*.

The precise period and manner of the discovery of the therapeutic power of *cinchona* are enveloped in mystery. . . . The statement of Candamo that the Countess of *Cinchon*, wife of the Viceroy of Peru, brought some bark to Europe on her return from South America in 1659, is not improbable; and from this circumstance it acquired the name of the *Cinchona* bark, and the countess's powder.—*Pereira, Elements of Materia Medica and Therapeutics*: 1690.

Cinchonism. *s.* In *Medicine*. Disturbed condition of the body brought about by over-doses of cinchona or quinine.

There is in sully's cinders, by some adhesion of iron, sometimes to be found a magnetical operation.

—*Sir T. Browne, Vulgar Errors*.

It is remarkable that in the French styles of Gothic architecture *cinquefoil* feathering is very rarely used.—*Glossary of Architecture*.

The stately Caledonian oak, newly settled in his triumphant throne, begirt with *cions* of his own royal stem.—*Howell*.

Cipher. *s.* [Fr. *chiffre*.]

1. In *Arithmetic*. The symbol 0. See extract.

The *cipher* of itself implies a privation of value; but when disposed with other characters on the left of it, in the common arithmetic, it serves to augment each of their values by ten; and in decimal arithmetic, to lessen the value of each figure to the right of it, in the same proportion.—*Chambers*.

See sic incipit ad scriptor cyclica olim:

Fortunani Primi cantab et nobile bellum.

the word is misapplied).

Circling-boy. Combination found in the following passage:

One Val Cutting that helps Jordan to rear, a circling boy.—*B. Jonson, Bartholomew Fair*, iv. 2.

The general import of this is pretty plain; the exact signification less so. In Nares, the editors render it *roaring boy*, the meaning being *roysterer, bully*. For more than this they refer to Gifford's note on the passage; this being to the effect that *circling* may mean either

(1.) Making a ring of bullies round the object of their insults, after the fashion of the Mohawks of a later period. Or,

(2.) Giving the lie in so indirect a manner as to do it with impunity. In favour of this latter meaning a reference is made to

—How I to take it?

Yes, in oblique he'll shew you, or in circle;
But never in diameter. (Alchemist, iii. 2.)

The editor thinks that, considering the writer who supplies the instance, the word is more likely to have a classical than an English origin, and that it means *mountebank* rather than *bully*. Compare the Latin *circulator*, also *Circumforaneus* and *Circeler*; the latter to show that the word was one on which Ben Jonson made experiments.

Circu-, or Circum-.

The important series of words commencing with *circum-* really begins here.

The reader who cares for the points connected with it will scarcely comprehend them without a previous study of what is said concerning a final *m* in composition, under *co-*, *com-*, and *con-*.

Having made himself familiar with these, all that he has to do is to remember that the rules there applicable have no application here. *Circum-*, as a general rule, retains the *m*; the only exception being words in which the second element is *-it-*, as *-it-er* = journey, from *-i-*, the root of *i-re* = go; and even here we have both forms, *circumdo* and *circueo*.

One of the reasons for this difference is that the words in which *circum-* is the first element are *two words* rather than compounds.

Circuiter, or Circiter. s. One who goes a circuit.

Both these words being obsolete, and probably rare when used, it is equally difficult to treat them as independent words, and to separate them.

The first was probably pronounced *circuiteer*, i.e. created as a derivative from *circuit*, like *character* from *chariot*.

The second, so far as it was a word at all, must have been sounded *circuiteer* or *circiter*; of which the most that can be said is that it grew out of the mixture of *circuiteer* and *circutious*.

Like your fellow *circuiteer* the sun, you travel the round of the earth, and behold all the iniquities under the heavens.—*Pope*.

Whether the thieves condemned by any *circiter* corrupted have done more villainies than their judges.—*Widdock, Manners of the English*, p. 513; 1654.

The struggles by which philosophers attained a right general conception of place, of circular, of elliptical Polarization, were some of the most difficult steps in the modern discoveries of Optics. Circulating. part. adj.

1. Returning into itself.

But we have already seen that in metaphysical speculations in which matter and form are opposed, the word form is used in a far more extensive sense than that which denotes a relation of space. It may indeed designate any change which matter can undergo; and we may very allowably say that food and blood are the same matter under different forms. Hence if we assert that life is a constant form of circulating matter, we express Cuvier's notion in a mode free from the false suggestions which 'Vortex' conveys.—*Whewell, History of Scientific Ideas*, ii. 200.

2. In Finance. Current; constituting currency.

Circulating medium is more comprehensive than the term money, as it is the method of exchanges, or purchases, and sales, whether it be gold or silver coin, or any other article.—*Wharton, Law Lexicon*.

3. In Arithmetic. See Decimals.

Nerve-force is no longer generated, if oxygen be withheld, or its blood prevented from circulating; by the fact that when the chemical transformation is diminished, as during sleep with its slow respiration and circulation, there is a diminution in the quantity of nerve-force; in the fact that an excessive expenditure of nerve-force involves excessive respiration and circulation, and excessive waste of tissue.—*Herschel, Speaker, Data of Biology*, § 21.

2. Series in which the same order is always observed, and things always return to the same state.

The weekly issue increased to sixty thousand pounds, to eighty thousand, to a hundred thousand, and at length to a hundred and twenty thousand. Nor did all the newly stamped silver pass into circulation.—*Macaulay, History of England*, ch. xxii.

Circuitorous. adj. Travelling in a circuit; showing tricks from house to house and from town to town; itinerant. Rare.

3. Windings.

Sidonius was one of those men, not so rare as may be supposed, who shrink, above all things, from an adventure of gallantry with a woman in a position. He had neither time nor temper for sentimental circumvolutions. He detected the diplomacy of passion: protocols, protracted negotiations, conferences, correspondence, treaties projected, ratified, violated. He had no genius for the tactics of intrigue; your reconnoitring, and marching, and counter-marchings, sappings and minings, assaults, sometimes surrenders, and sometimes repulses.—*Disraeli the younger, Coningsby, b. vi. ch. ii.*

And freed the Holy Sepulchre from thral.

Byron, Lament of Tasso.

Cirl(-bunting), s. Bird so called (Emberiza Cirlus).

The Cirl Bunting is generally found on the coast, and does not appear to go far inland. . . . It is much more shy than the Yellow Bunting. The nest is usually placed higher above the ground than that of the Yellow Bunting. French Yellow Ammer, and Black-throated Yellow Ammer, are the provincial names which have been applied to it. . . . In the northern counties the Cirl Bunting is very rare. . . . The Cirl Bunting is most numerous in the southern parts of the European continent.—*Turrill, British Birds*.

Keats, Hyperion, 1.

Cirrhoped, or Cirriped, s. [The former is directly from the Greek *κίρρη* = curl and *πῶς* = foot, and is contrasted with the latter, which is directly from the Latin *cirrus* = curl and *pes, ped-is* = foot, by having *rh* in place of the second *r*, *o* = *i*, and *pid* = *pid*.]

In Zoology. Animal of the class called Cirripedia, of which the acorn-shells (Balanus) and the barnacles (Lepadæ) are the chief representatives. See extracts.

Within the memory of many living naturalists, *cirripedes* were universally looked on as belonging to the molluscous kingdom; nor was this surprising, considering the fixed condition of their shells. . . . It is remarkable that this external false appearance overbore, even in the mind of Cuvier, his knowledge of their internal structure, namely, their lateral jaws, articulated appendages, and a regular ganglionic nervous system. . . . Straus was, I believe, the first who, in 1819, maintained that *cirripedes* were most closely allied to Crustacea. But this view was disregarded, until J. Vaughan Thompson's capital discovery, in 1830, of their metamorphoses, since which time *cirripedes* have been almost universally admitted amongst the crustaceans. It is well known that it is hardly possible to give a definition of this great class, which shall include every member of it; nevertheless, the following characters, viz. the slight separation of the head and thorax, the latter generally bearing six pairs of appendages, and the being enclosed in a carapace—together with the periodical exuviation of the greater part of the external membranes, would, perhaps, suffice to show that it should be classed amongst Crustacea.—*Darwin, Monograph of the Cirripedia*.

In the following extract each author quotes the other, so that the two orthographies are mixed.

Mr. Darwin, who has given the best account of the female organs in the pedunculated *cirripede*, writes, &c., &c. . . . Mr. Darwin has shown that the organ, by the secretion of which the *cirripedes* attach themselves to foreign bodies, is a modified part of the ovarian tube. . . . In a few *cirripedes*, e.g. the species of Cryptophialus, the changes from the egg to the pupa take place within the sack of the parent. . . . The antennæ are the organs by which the young *cirripede* finally anchors itself to the spot where its future adult existence is to be spent. The three terminal segments of the antennæ, into which the coenocytic ducts are prolonged, are retained in an otherwise functionless condition, in the young *cirripede*.

The mouth is formed under that of the pupa, with a new oesophagus round the old oesophagus, leading in to the same alimentary canal. The twenty-four extreme tips of the six pairs of biramous cirri of the young *cirripede* are formed within the twenty-four extremities of the six pairs of biramous rudimentary legs of the pupa. 'Consequently,' writes Darwin, 'in the *cirripede* and pupa, thus far, part corresponds with part, notwithstanding that new eyes are formed posteriorly to the old eyes, and new acoustic organs in a quite different position from the old ones; but now we come to a most important diversity in the metamorphosis, or rather, to follow Professor Owen, in the metagenesis, of the young *cirripede*.'—*Owen, Lectures on Comparative Anatomy*, lect. xii.

The editor treats these forms as concurrent, holding that the former is the better, but believing that, as the great authorities are against it, the chances of its prevailing are against it also.

That he is no friend to the doctrine of treating words of Greek origin as words introduced through a Latin medium is evident. He must not, however, be supposed to place words like the present in the same category with words of a more exclusive and decided English character. The arguments, for instance, in favour of *ascetic* being spelled with a *k* are not arguments in favour of words like *Cirrhoped* being spelled *Kirrhoped*. This is because the language of Zoology, like that of Chemistry and other sciences, is not exclusively English. On the contrary, it partakes of the nature of a universal language. Hence the necessity, in cases like the one before us, of looking to other languages. In favour, then, of the principle of Latinizing Greek words is to be set down the important fact of the chief languages derived from the Latin (the French and Italian, to go no farther) universally doing so. Hence, if a word, on the strength of its scientific character, be common to the French and English, and if this community be an advantage, the practice of both the languages must enter into all considerations of its form. This, as before said, puts scientific and non-scientific words in different categories. Secondly, as far as the words in question are concerned, the French, Italian, and English are the only languages that bear upon it. If the habit of the German and Scandinavian languages, the nearest congeners of our own, were decidedly opposed to that of the French and Italian, and if it were their practice to ignore the Latin as a medium, and to treat words of Greek origin as direct introductions from the Greek itself, forming and spelling them accordingly, we in England might consider the practice divided, and make our choice without danger of isolation. But the German and Scandinavian practice is not this. As a general rule, the Germans and Scandinavians resort, like the French and Italians, to the classical languages; but not with the view of getting the classical term either literally or verbally. Instead of this, they translate it, so that the equivalent comes out as a complete German or Danish word, rather than as a Greek one. Thus, the German scientific term for the animals under notice is *Rankenfüsssen*; the French, *Cirripède*.

In Todd's Cyclopædia of Anatomy and Physiology the entry is *Cirrhopoda*, whilst the word used in the text is *Cirriped*. The exact details of the sound and spelling of *Cirriped* have yet to be settled. The difference as to the final letter, between the two influential authorities quoted in the extracts, shows this.

Cirrhoped is the Greek, *Cirriped* the Latin, form; the former requiring the connecting vowel to be *o*, the latter *i*. That the word, in either shape, is more Greek than Latin is well known. The etymological fiction, however, that words of Greek origin are, as a general rule, supposed to come to us through a Latin medium, the inference therefrom that *k* is to be written *c*, and the risk, or rather certainty, of the letter so written being sounded as *s*, have already been noticed. See *Ceg*.

The objections to the spelling with *e* are: (1.) In the singular number it disguises the quantity of the vowel, suggesting the notion that the *e* in *ped-is* is long, whereas it is short; besides which, the mute *c* is foreign to the Latin language. (2.) It leaves the character of the plural doubtful. Is *Cirripedes* a Latin word of four syllables, or an English word of three? If the latter, the *e* is improperly lengthened. Or is it French?

The question under notice is one out of the many other inconveniences of the fiction just mentioned. To the derivatives from the Greek *κίρρη* no one affixes an *-e*, so that *Cirrhoped* gives, plainly and simply, *Cirripodæ*; presuming, of course, the plural form to be English. If not English, it gives *Cirrhopodæ*; a word which, whatever else may be said against it, is not, like *Cirripedes*, trisyllabic, i. e. English or French or Latin, trisyllabic or quadrisyllabic, as the case may be.

The objection to the ending in *-d* is simply the fact of *centipede*, *millipede*, and a few other words, supplying a plausible precedent against it. It would be best, if practicable, to alter these; and, if impracticable, to be inconsistent, rather than be consistent in a theoretical error and a practical inconvenience. But, even in respect to the precedents, it may fairly be said that such important and common words as *quadruped* and *biped* outweigh *centipede* and *millipede*, and probably any others that can be added to them. Nor is this all. The opposing precedents belong to different classes. Phonetically, *centipede* and *millipede* have the last syllable sounded *-ped*; etymologically, they may be considered as having it formed after the French *pede*. Hence, if the rule stand thus, that direct and undoubted derivatives from the Latin *ped-*, preserving their short sound, are spelled without the *e*,—the form *Cirriped* has not so much as a genuine precedent against it; in other words, besides being convenient, it is unexceptionable.

In the wide *cisterns* of the lakes confin'd;
Did not the springs and rivers drench the land,
Our globe would grow a wilderness of sand.

Sir R. Blackmore.
A *cistern* containing a hundred and twenty millions of punch was emptied to his Majesty's health; and a mighty pile of fragrant blazard in the middle of that spacious court which is overflowing by ruins green with the ivy of centuries.—*Macaulay, History of England*, ch. xli.

From some of these *cisterns* Caesar's troops were supplied; and Ganimedes proposed to deprive them of their supply by pumping sea-water into those pipes which led into the Irachium.—*Sharpe, History of Egypt*, ch. x.

Cit. *s.* [contracted from citizen.] Inhabitant of a city; cockney: (in an unfavourable sense).

O ye, addlebrained *cits*!
Who henceforth to his wife?
Would trust their youth to your breeding,
When in diamonds and gold
Ye have him thus enrolled,
Ye knew both his friends and his breeding.

Andrew Marvell, Ballad on the Lord Mayor and Court of Aldermen.
The Peck, the Fens, the Humbrils, or Land's-end,
I would prefer to Fleet-street, or the Strand,
What place so desert, and so wild is there,
Whose inconveniences our would not bear,
Rather than the alarms of midnight fire,
The fall of houses, knavery of *cits*,
The plots of factions, and the noise of wits?

Oldham, Imitation of Juvenal's third Satire.
Study your race, or the soil of your family will divide
You into *cits* or squires, or run up into wits or madmen.—*Tait*.

Barnard, thou art a *cit* with all thy worth;
But Bug and D—l, their humours, and so forth.

Pope.
It is not by his liveliness of imagery, his pungency of periods, or his fertility of allusions, that he details the *cits* of London and the bores of Middlesex. Of style and sentiment they take no cognisance: they admire him for virtues like their own; for contempt of order and violence of outrage; for rage of denunciation and audacity of falsehood.—*Johnson, Thoughts on the late Transactions in the Falkland Islands*.

Citadel. *s.* [Fr. *citadelle*.] Fortress, castle, or place of arms, in a city.

As he came to the crown by unjust means, as unjustly he kept it; by force of stranger soldiers in *citadels*, the nests of tyranny, and murderers of liberty.—*Sir P. Sidney*.

The ecclesiastical courts proceed according to the course of the civil and Canon Laws, by citation, libel, &c.—*Jacob, Law Dictionary*.

2. Quotation. (Notwithstanding the extent to which *cite* and *quote*, with their derivatives, may be used for one another, they are essentially different; neither are all the significations of the two words interchangeable. The letter-writer cannot read these citations without blushing, after the charge he hath advanced.—*Bishop Atterbury*.

View the principles in their own authors, and not in the citations of those who would confute them.—*Watts*.

His [Sir V. Gibbs'] legal arguments were often much to be admired. He did not go by steps, and move on from point to point, garnishing each head with two observations, as many citations, and twice as many cases; so that the whole argument should be without breadth or relief, and each single portion seem as much as any other the pivot upon which the conclusion turned—but he brought out his governing principle roundly and broadly.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Sir V. Gibbs*.

3. Enumeration; mention.

These causes effect a consumption, endemic to this island; there remains a citation of such as may produce it in any country.—*Harvey, Discourse of Consumptions*.

In their letters *citatory*, they were warned to come and give an account to the synod of the doctrine which they had delivered in their schools and pulpits.—*Hales, Golden Broom*, p. 130: *Holmwood, Letter from the Synod of Dort*.

The summoners, one after another, were repelled; letters *citatory* affixed on the doors of Rochester Cathedral, three miles off, were torn down and burned.—*Milman, History of Latin Christianity*, b. xii. ch. vii.

Gibbs*.

It might be said of him, as he said himself of Sir James Mansfield, that "he declared the law," while he argued his cases; and while others left only the impression on the hearer that many authorities had been *cited*, and much reading displayed, his argument penetrated into the mind, and made it assent to his positions, without much regarding the support they found from other quarters.—*Ibid*.

I must desire the *citer* henceforward to inform us of his editions too.—*Bishop Atterbury*.

They taking it otherwise, and refusing the good through an implanted evil disposition, and always prone to mischief, have not only rejected the *citizenship* as inalienable, but also abhor both openly and secretly, the few among them who are well affected to us. —*Bishop Wilson's Bible, 1 Maccabees*, iii. 10.

Our *citizenship*, as saith the apostle, is in heaven. —*Bishop Horne, Occasional Sermons*, p. 158.

Citric acid . . . is found in the juice of many plants, particularly in those of the different species of *Citrus*, *Vaccinium*, and *Litsea*. To obtain it citrate of lime is formed by adding chalk to lemon-juice; and this salt is afterwards decomposed by dilute sulphuric acid in slight excess, and the *citric acid* purified by crystallization. Citrino. *s.* Name sometimes given to rock-crystal of a lemon, golden, or wine colour.

It is ever found in a large and slender column, irregularly hexagonal, and terminated by an hexagonal pyramid. It is from one to four or five inches in length. Lodge, Pleasant History of Glaucus, &c.: 1610. Let it be taken for granted, that an occasion may arise, in which a king of England shall be compelled to take upon himself the ungrateful office of rejecting the petitions, and ensuring the conduct of his subjects; and let the city reconstrue him as supposed to have created so extraordinary an occasion.—*Lectures on Law*, let. 55.

His (the City Alderman's) head is of no great depth, yet well furnished; and when this in conjunction with his brethren may bring forth a city apophthegm or some such sage matter.—*Barle, Microcosmography*.

Cives. s. Same as Chives.

Civet. s. [Fr. *civet*; Arabic and Persian, *zabid*.] Perfume obtained from the civet cat (Viverra Zibetha and V. Civetta), to which it gives its name.

Civet is of a baser birth than far; the very uncleanly flux of a cat.—*Shakespeare, As you like it*, iii. 2.

Some putrefactions and excrements do yield excellent colours; as civet and musk, and, as some think, ambergrace.—*Bacon, Natural and Experimental History*.

I cannot talk with civet in the room.

A fine perfume that all perfume;

The sight's enough, no need to such a bean.

Comper, Conversation, 283.

This substance approaches in smell to musk and ambergris; it has a pale yellow colour, a somewhat acrid taste, a consistence like that of honey, and a very strong aromatic odour. It is the product of two small quadrupeds of the genus Viverra, of which one inhabits Asia, the other Africa. They are reared with tenderness, especially in Abyssinia. The civet is contained in a sac situated between the anus and the parts of generation in each sex. . . . According to M. Rouillon-Chabard, it contains a volatile oil, to which it owes its smell; some few ammonia, resin, fat, extractive matter, and mucus. It affords by calcination an ash, in which there is some carbonate and sulphate of potash, phosphate of lime, and oxide of iron.—*Vre, Dictionary of Arts, Manufactures, and Mines*, in voce.

Civile. adj. [Lat. *civis* = citizen.]

I have remarked in the Lectures on Political Economy, that the descriptions some writers give of the civilization of mankind, by the spontaneous origin, among tribes of savages, of the various arts of life, one by one, are to be regarded as wholly imaginary. . . . Inasmuch as there is no record or tradition of any race of savages having ever civilized themselves without external aid. . . . Abundant as are the traditions (though mostly mixed up with much that is fabulous) of the origin of civilization in various nations, all concur in tracing it up to some foreign, or some superhuman, instructor. If ever a nation did emerge, untaught, from the savage state, all memory of such an event is totally lost. Now the absence of all such records or traditions. . . . led me, many years ago, to the conclusion, that it is impossible for mere savages to civilize themselves—that consequently man must at some period have received the rudiments of civilization from a superhuman instructor—and that savages are probably the descendants of civilized men, whom wars and other afflictive visitations have degraded.—*Whately, Elements of Rhetoric*, pt. i. ch. ii. § 4.

thick, fayed to the sides, to support the ends of the
beams. Clamps, in a ship, are also pieces of timber

crooked iron pinto, fastened to the after end of the
main cap of masts, to secure the try-sail mast.
Clamp also denotes a little piece of wood, in form
of a wheel, used instead of a pulley in a mortice.—*Rees, Cyclopaedia*, in voce.

Without cities in which municipal institutions
had been organized, without Roman laws of pro-

Land was the common property of the clan, and
a fresh division was made on the death of every
proprietor.—*Ibid.*

More than a year had elapsed since the massacre
of Glencoe. . . . It is certain, however, that no mo-
tion for investigation was made. The state of the
Gaelic clans was indeed taken into consideration. A
law was passed for the more effectual suppressing of
depredations and outrages beyond the Highland
line. . . . The injured clan, bowed down by fear of
the all-powerful Campbells, and little accustomed to
resort to the constituted authorities of the kingdom
for protection or redress, presented no petition to
the estates.—*Macaulay, History of England*, ch. xii.

I walked on; and as I approached our little church,
the sound of the bell, tolling louder and louder as I

his, and the cruellest charge of all: 'there are a great
many killed and wounded.' Not without clangour,
complaint, substantial criminal trials, and efficient
persons (dying of heartbreak!) So, however, with
steel-beam, Rascality is brushed back into its dim
depths, and the streets are swept clear.—*Carlyle,*

dependents, are all elements in the system which
overspread Europe in the middle ages.—*C. H. Pearson,*

of England, ch. v.

No one who has well studied the history of sciences can fail to see how important a part of that history is the explication, or, as I might call it, the *clarification* of men's ideas. This, the metaphysical aspect of each of the physical sciences, is very far from being, as some have tried to teach, an aspect which it passes through at an early period of progress, and previously to the stages of positive knowledge. Clart. v. a. Daub; smear; spread.

There must be a specific essence, which is the root of those powers, properties, or operations, from whence we conclude distinct species of things; for 'tis too coarse and slovenly to conceit that these are *clarted* on them; but the specific powers arise immediately and necessarily from the nature of the thing; else why might they not be other powers as well as these?—*Annotations upon Bishop Ruse's Discourse of Truth*, p. 235: 1683.

Three essences *clarted* upon some fourth essence, or glewed together one to another.—*Ibid.* p. 257.

The absurdity in this instance is obvious; and yet every time that *clashing* metaphors are put together, this fault is committed.—*Spectator*, no. 683.

Clashing. *verbal abs.* Opposition; enmity; contradiction; (accompanied with noise, in such expressions as 'the clashing of arms,' but not always so; though noise was probably an element in the original idea).

Yet still the man should find a civil war within himself, a great confusion and disturbance, his thoughts divided between contrary principles, the clashings of prudence and revenge.—*South, Sermons*, vii. 185.

Shakespeare, Othello, i. 1.

[*Clasp*.—Related to *clip* as *grasp* to *grip* or *grasp*. But *clasp* or *clap*, as it is written by Chaucer, is probably by direct imitation from the sound of a metal fastening, as we speak of the *clasp* of a bracelet for a fastening that shuts with a snapping sound, or German, *schnalle*, a clasp, buckle, lock of a door, from *schnellen*, to snap. Dutch, *grasp*, *ghep*, *sluis*, *ansel*.—*Weigand, Dictionary of English Etymology*.]

The claspers are present in the chimeroid fishes as well as in the plagiostomes. They project backwards as appendages to the bases of the anal fins, and are sometimes bent inwards at their free extremities.—*Owen, Lectures on Comparative Anatomy*, lect. xii.

Certain changes and peculiar phenomena attend the increase of size of the soft and hard roes during these primary processes of generation. The colors of the fishes become more marked and brilliant; the different sexes are often distinguished by peculiar tints; as the male stickleback by his bright red throat, for example. The claspers in the male plagiostomes then acquire their full development and force; the basal glands in those of the rays enlarge.—*Ibid*.

Pope, Dunciad.

The kingdom of England, instead of so many dioceses, was now [during the great rebellion] divided into a certain number of provinces, made up of representatives from the several classes within their respective boundaries. Every parish had a congregational or parochial presbytery for the affairs of its own circle; those parochial presbyteries were combined into classes, which chose representatives for the provincial assembly, as did the provincial for the national. Thus, the city of London being distributed into twelve classes, each class chose two ministers and four lay-elders, to represent them in a provincial assembly. T. Walton, *Notes on Milton's Poems*.

3. Number of boys in the same part of a school.

We shall be seized away from this lower class in the school of knowledge, and our conversation shall be with angels and illuminated spirits.—*Watts, Improvement of the Mind*.

3. Relating to the order and rules of the presbyterian assemblies.

Surely when we put down bishops and put up presbyters, which the most of them have made use of to enrich and exalt themselves, and turn the first heel against their benefactors, we did not think, that one classic fraternity, so obscure and so remote, should involve us and all state-affairs within the censures and jurisdiction of Belfast, upon pretence of overseeing their own charge.—*Milton, Observations on the Articles of Peace between the Earl of Ormond and the Irish*.

Dare ye for this adjudge the civil sword To force our consciences that Christ set free, And ride us with a classic hierarchy?

Classical. adj.

1. Relating to, or having the character of, the classics.

Authors of best note, and generally applauded, are called classical.—*Bullock, 1856*.

From this standard the value of the Roman weights and coins are deduced; in the setting of which I have followed Mr. Grenville, who may be justly reckoned a classical author on this subject.—*Arbuthnot, Tables of ancient Coins, Weights, and Measures*.

Sometimes I put myself to school to one of these ancients, whom the church hath honoured with the name of Fathers; whose volumes I confess not to open without a secret reverence of their holiness and gravity; sometimes to those later doctors, which want nothing but age to make them classical.—*Bishop Hall, Epistles*, vi. 1. (Ord MS.)

Accordingly, he [Sheridan] brought away from school a very slender provision of classical learning; and his taste, never correct or elated, was whittied down by acquaintance with the English poets and dramatists, and perhaps a few of our more ordinary prose-writers.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Mr. Sheridan*.

The duller portion over whose heads his [Mr. Cunningham's] lighter missiles flew, were offended with one who spoke so lightly; it was almost personal to them if he joked, and a classical allusion was next thing to an affront.—*Ibid., Mr. Cunningham*.

They are generally well versed in classical literature, and often acquainted with mathematical science.—*Ibid., Sir F. Gibbs*.

2. Classificatory.

Unwilling to give similar classical characters to both of his primary divisions, Ctesalpinus has passed over what at first is most striking in the form of trees. . . . For this purpose, though he [Ray] paid particular attention to the fruit, which he thought of primary importance, he judged it expedient to seek for classical characters from other parts of a plant.—*Rees, Cyclopaedia, Classification*.

3. Relating to the class-system (generally ecclesiastical).

We perceive it [presbyterian government] aspiring to be a compulsive power upon all without exception in parochial, classical, and provincial hierarchies.—*Milton, Observations on the Articles of Peace between the Earl of Ormond and the Irish*.

After they have so long contended for their classical ordination, will they at length submit to any episcopal?—*Dryden, Preface to Hind and Panther*.

Mr. Baxter takes great pains to unite the classical and congregational brethren, but claws off the episcopal party as a set of Cassandrian priests.—*Bishop Nicholson, To Mr. Yates*, 1629.

Classicality. s. Classical character; classical knowledge.

This is literally true of a visit which Napoleon, a short time before, had made to the great library, in which occasion even when going up the staircase he was continually asking for the celebrated passage in Josephus where the historian speaks of Christ, and appeared to have no other object for his present visit than thus to make a display of this scrap of classicality which he had just acquired; it seemed quite as if he had learned his question by heart.—*Foreign Quarterly Review*, no. 1.

Classicism. s. Approach to, or affectation of, the classical character. See *Christianism*.

Catholicism, classicism, sentimentalism, cannibalism; all aims that make up man in France, are roaring and roaring in this gulf.—*Carlyle, French Revolution*, pt. iii. b. v. ch. i.

Classics. s. Greek and Latin literature, as opposed to mathematics or science; writers, authorities, or models, of the first class; types of excellence of any kind.

His [Mr. Fox's] knowledge was confined to the ordinary accomplishments of an English education—intimate acquaintance with the classics; the exquisite taste which that familiarity bestows; and a sufficient knowledge of history.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Mr. Fox*.

His knowledge, too, was not confined to the study of the classics, though with these he was familiarly conversant; the more severe sciences and languages had imparted to him more acquaintance with the strictness of sciences which have led their home upon the banks of the Granta since Newton made them his abode; and with political philosophy he was more familiar than most Englishmen of his own age.—*Ibid., Mr. Pitt*.

Classifiable. adj. Capable of Classification.

These changes are classifiable as the original sensations are. As two sensations can be known as like or unlike in kind; so can two changes among them be known as like or unlike in kind.—*J. S. Mill, System of Logic*, i. 295.

Classification. s. Distribution into classes and divisions; (applied most definitely and precisely to the Classificatory sciences).

In the classification of the citizens, the great legislators of antiquity made the greatest display of their powers.—*Burke*.

The classification of sciences has its chief use in pointing out to us the extent of our powers of arriving at truth, the avenues which may be taken between those certain and lucid portions of knowledge with which we are here concerned, and those other portions of a very different interest and evidence. . . . The classification of human knowledge will, therefore, have a more peculiar importance when we can include in it the moral, political, and metaphysical, as well as the physical portions of our knowledge. . . . In this, as in any other case, a sound classification must be the result, not of any assumed principles imperatively applied to the subject, but of an examination of the objects to be classified: of an analysis of them into the principles in which they agree and differ. The classification of sciences must result from the consideration of their nature and contents. . . . As a good nomenclature presupposes a good system of classification, so, on the other hand, a system of classification cannot become permanent without a corresponding nomenclature. Caspary, in the sixteenth century, published an excellent system of arrangement for plants; but this, not being connected with any system of names, was never extensively accepted, and soon fell into oblivion. The business of framing a scientific botanical classification was in this way delayed for about a century. In the same manner, Willoughby's classification of fishes, though, as Cuvier says, far better than any which preceded it, was never extensively adopted, in consequence of having no nomenclature connected with it.—*Whewell, History of Scientific Ideas.*

There is . . . a classification of things, which is inseparable from the fact of giving them general names. . . . On this kind of classification we have nothing to add to what has previously been said. This classification, which requires to be discussed as a separate act of the mind, is altogether different. . . . Classification, thus regarded, is a contrivance for the best possible ordering of the ideas of objects in our minds; for causing the ideas to accompany or succeed one another in such a way as shall give us the greatest command over our knowledge already acquired, and lead most directly to the acquisition of more. The general problem of classification, in reference to these purposes, may be stated as follows: To provide that things shall be thought of in such groups, and those groups in such an order, as will best conduce to the remembrance and to the ascertainment of their laws. Classification thus considered, differs from classification in the wider sense, in having reference to real objects exclusively, and not to all that are imaginable. . . . There is no property of objects which may not be taken, if we please, as the foundation for a classification or mental grouping of those objects. . . . But these classifications, which are at first recommended by the facility they afford of ascertaining to what class any individual belongs, are seldom much adapted to the ends of that classification which is the subject of our present remarks. . . . The ends of scientific classification are, as we have seen, twofold: when the objects are formed into groups respecting which a greater number of general propositions can be made. . . . A classification thus formed is properly scientific or philosophical, and is commonly called a natural, in contradistinction to a technical or artificial, classification or arrangement. . . . The same objects, therefore, may admit with propriety of several different classifications. Each science or art forms its classification of things according to the properties which fall within its special cognizance, or of which it must take account in order to accomplish its peculiar practical ends. A farmer does not divide plants, like a botanist, into dicotyledonous and monocotyledonous, but into useful plants and weeds. A zoologist divides fossils, not, like a zoologist, into families corresponding to those of living species, but into fossils of the secondary and of the tertiary periods, above the coal and below the coal, &c. Wholes are or are not fish, according to the purpose for which we are considering them. . . . These different classifications are all good, for the purposes of their own particular departments of knowledge or practice. . . . Classes formed on this principle may be called, in a more emphatic manner than any others, natural groups.—*J. S. Mill, System of Logic*, b. iv. ch. vii. § 1-2.

Classificatory, *adj.* Consisting in, or forming the basis of, classification: (Mineralogy, Botany, and Zoology are the sciences preeminently so called).

When it was seen that botany derived so great advantages from a systematic improvement of its language, it was natural that other sciences, and especially classificatory sciences, should endeavor to follow its example.—*Whewell, History of Scientific Ideas.*

Terms must be constructed and appropriated so as to be fitted to enunciate simply and clearly true general propositions. This aphorism may be considered as the fundamental principle and supreme rule of all scientific terminology. It is asserted by Cuvier, speaking of a particular case. Thus he says of Gmelin, that by placing the lamantin in the genus of mooses, and the airen in the genus of seals, he had rendered every general proposition respecting the organization of those genera impossible. The maxim is true of words appropriated as well as invented,

and applies equally to the mathematical, chemical, and classificatory sciences.—*Ibid.*

It might always to be recollected that though the analytical process carried to the uttermost, and separating groups by observation of differences, is necessary for the purpose of ascertaining the facts upon which botany or any other classificatory science is based, it is a tedious synthesis alone, associating individuals by the ties of language, which can enable the human mind to take a comprehensive view of these facts, to deduce from them the principles of the science, or to communicate to others either facts or principles.—*Ibid.*

Classifier, *s.* One who classifies; one who investigates the principles of classification.

The classifiers of this period were chiefly Fructists and Corollists.—*Rees, Cyclopaedia, Classification.*

Classify, *v. a.* Arrange in classes.

To make such an assumption is to renounce, at once, all hope of framing a system which shall be governed by the resemblances of the things classified; for how can we possibly know beforehand that fifty-five per cent. of iron shall give a substance its predominant properties, and that forty-five per cent. shall not?—*Whewell, History of Scientific Ideas*, li. 27.

Classifying, *part. adj.* Relating to, bearing upon, or capable of being applied to, Classification.

Of a very different temper and character was William Smith. No literary cultivation of his youth awoke in him the speculative love of symmetry and system; but a singular clearness and precision of the classifying power, which he possessed as a native talent, was exercised and developed by exactly those geological facts among which his philosophical task lay.—*Buckle, History of Civilization in England*, li. 315.

Classing, *verbal abs.* Reduction to a class or classes; classifying.

But how, it may be asked, does this prove that classification presupposes reasoning; as well as reasoning, classification? It may be true that the intuition of similarity is their common root. It may be true that our conscious inferences involve acts of classing. But it does not, therefore, follow that our conscious acts of classing involve inferences.—*J. S. Mill, System of Logic*, li. 174.

Classis, *s.* [Lat.]

2. In *Botany*. See *extract*.

A petal consists of the following parts; the limb or lobe; and the margin or *claw*. The *claw* is the narrow part at the base which takes the place of the stalk of the leaf of which it is a modification. The limb is the dilated part supported upon the *claw*; and is a modification of the blade of the leaf. In many petals there is no *claw* as in *Rosa*; in many it is very long, as in *Dianthus*. When the *claw* is present the petal is said to be *membranaceous*. In some minutely deformed flowers the limb is absent as in the garden variety of *Rosa* called R. *Ellet*, in which the petals consist wholly of *claw*. —*Lindley, Introduction to Botany*, b. i. ch. ii. sect. 4, § 7.

Claying. *verb. abs.* In *Sugar-making*. Operation by which sugar is purified.

The *claying* now begins; which consists in applying to the smelted nature of the sugar at the base of the cone a plaster of argillaceous earth, or finely divided limon, in a paste state. The water diffused among the *clay* escapes from it by slow infiltration, and descending with like slowness through the body of the sugar, carries along with it the residuary viscid syrup, which is more soluble than the coagulated particles. Whenever the first measure of *clay* has become dry it is replaced by a second, and this, occasionally, in its turn by a third, who rely the sugar cane sets tolerably white and clean. —*Lee, Dictionary of Arts, Manufactures, and Mines*, *Sugar*.

Claying is seldom had recourse to in the British plantations, on account of the increase of labour and diminution of weight in the produce, for which the improvement in quality yields no adequate compensation. Cleanly, adj. (pronounced *cleany*.)

[This is a word wherein the addition of a second element has influenced the sound of the first, a phenomenon so common in language in general as to make its comparative absence in English remarkable. The affix is the syllable *-ly*, pronounced short; which is simply an abbreviation of the word *like*, wherein the vowel is long. Hence, it is safe to infer that when *cleanly* was first used the addition was, not the word *like* in its full form, but the modified and shortened form *-ly*. The next point to remark is, that in the adverb *cleanly* the *-a-* is sounded long, as in *clean*. The convenience of making a distinction between the two parts of speech may have had something to do with the change and its unsided application. It is more probable, however, that the real reason, for the shortening of the vowel lies in the forms *cleane*, *cleanser*, and *cleansing*, wherein the effect of the addition of the consonant *s* has been, as is often the case, to shorten the vowel by which it is preceded. If this be so, *cleany* must be looked on as a derivative from *clean* as its base, but modified in respect to its form by the influence of *cleane*, *cleanser*, and *cleansing*; all of which are very old words, and belonged to our language when it was Anglo-Saxon, as *cleansum*, *cleansere*, *cleansung*.]

Cleavage. *s.* (used also *adjectivally* in the extract.) In *Mineralogy*. See Lamination.

Again, in the tessular system, the *cleavage* may be parallel to the surface of the cube, which is thus readily separable into other cubes, as in Galena; or the *cleavage* may be such as to cut off the solid angle of the cube, and since there are eight of these, such *cleavage* gives us an octahedron, which, however, may be reduced to a tetrahedron, by rejecting all parallel faces, as being mere repetitions of the same *cleavage*; this is the case with Fluor Spar; or the cube of the tessular system may be *cleavable* in planes which truncate all the edges of the cube; and as these are twelve, we thus obtain the dodecahedron with rhombic faces: this occurs in Zinc Blende. And thus we see the origin of Hübner's various primitive forms, the tetrahedron, octahedron, and rhombic dodecahedron, all belonging to the tessular system: they are, in fact, different *cleavage* forms of that system.—*Whewell, History of Scientific Ideas*, ii. 79.

Preceded by plane.

Take a case. When I say, — All crystals have *planes of cleavage*; this is a crystal; therefore, this has a *plane of cleavage*; and when it is asserted that this describes the mental process by which I reached the conclusion; there arises the very obvious question: What induced me to think of 'All crystals'? Did the concept 'All crystals,' come into my mind by a happy accident, the moment before I was about to draw an inference respecting a particular crystal? — *Herbert Spencer, Principles of Psychology*, § 38.

It *cleaves* with a glossy polite substance, not plane, but with some little unevenness. *Sir I. Newton, Opticks*.

[*Cleave*.—This word is used in two opposite senses, viz. 1, to adhere or cling to, and, 2, to separate into parts. In the former sense we have German *kleben*, Dutch *kleven*, *klejven*, to stick to, to fasten; Provincial English *clibbin*, Dutch *kleevig*, *klisrig*, sticky. From *clib*, a lump, a mass. . . . The double signification of the word seems to arise from the two opposite ways in which we may conceive a cluster to be composed, either by the adherence of a number of separate objects, or by the division of a single lump or block into number of separate parts. Thus from German *kleben*, a mass, lump, or bundle (*ein kleben fluch*, a bunch of flax), *kleben*, *klebe*, to cleave. When an object is simply *cleft*, the two parts of it *cleave* together. Dutch *kloue*, a cleft, *klouen*, chaps in the skin, *klouen*, *klouen*, to chink, cleave, split. (Kilian.) The Danish uses *klæbe* in the sense of adhering, *klæve* in that of splitting. The Danish *klør*, a tongue, bears nearly the same relation to both senses. Swedish *kläffa*, German *klauen*, a vice, a bill of wood cleft at one end. The designation may either be derived from the instrument being used in pincning, holding together, or from being divided into two parts. Swedish *cliff*, a fissure, the fork of the twigs, or of a tree. The same opposition of meanings is found in other cases, as the Dutch *klonck*, a cleft or fissure, and Danish *klouke*, to cleft or fasten together the parts of a cracked dish. Dutch *klinken*, to fasten together; English, *cleave*. Compare also French *cierre*, to fasten, to cleave, English *cire* and *rire*, to tear or cleave asunder, *rift*, a cleft.—*Wedgwood, Dictionary of English Etymology*.]

There's one eye out already, and now I've a mind for his tail. Corporal, lend me the *cleaver*.'—*Marechal, Starleggion*, vol. iii. ch. i.

Cleavers. *s.* Name given to the Galium Aparine, from its sticking or cleaving to everything which touches it, a property due to the numerous small hooks which beset its stems, leaves, and fruit; goosegrass. Climatis. *s.* [Gr. *κλίματις*, vine-prop, tr 2-lis: the second syllable short.] Generic name for a large group of climbing ramunculous plants, several of which are cultivated in England, and one of which, the *Climatis Vitalba*, is native. As all the so-called English names for this last are evidently misapplied, it would be well to recognize *Climatis* as a popular as well as a scientific name. *Agnus castus*, *chaste-tree* (an approximate translation), and *Virgin's bower* may possibly be as appropriate as any such names can be, though they have but little to recommend them. Meanwhile, *climber* and *clamberer* are too general; whilst the next, *traveller's joy*, seems to have originated in a blunder. So far from the plant being a comfort to the traveller, it is, like its congeners, an acrid poison, and, when applied externally, a caustic. Being used by the beggars to make artificial sores, it has in different countries been named accordingly: in German, *bettlerskraut*; in French, *herbe au gueux*, *viorne*, *viornes*, *viornes*, and finally *la consolation des voyageurs*, on the strength of the connection between a poor man's plant and a wanderer's friend. This suggests another name, the *wayfaring tree*.

Here, however, the confusion is complex; inasmuch as the Wayfaring Tree is the *Viburnum Lantana*; *viorne* being the French form of *viburnum*; and this we have already seen applied to the Clematis.

Virgin's bower is believed to have been taken from a picture representing the Virgin Mary with the flower of some creeper above her. For further remarks on the many names of this plant, and the confusion in their application, see *Eglantine* and *Woodbine*.

Upright Clematis, or Virgin's bower, is also a kind of Clematis.—*Gervase, Herball*, p. 888: ed. 1633.

Geyer says that the root of a species of *clematis* is used by the North American Indians as a stimulant to the horses which drop down during their races.—*Lindley, Vegetable Kingdom, Remembrance*.

For us, and for our tragedy,
Here stooping to your clemency,
We beg the hearing patiently.

Shakespeare, Hamlet, iii. 2, prologue.

Be careful for the country, and our nation which is pressed on every side, ordering to the clemency that thou readily shewest unto all.—*2 Macbeth*, xiv. 9.

I pray thee that thou wouldst hear us, of thy clemency, a few words.—*Acts*, xxiv. 1.
Then in the clemency of upward air,
We'll scour our spots, and the dire thunder scar.

Dryden.

I have stated the true origin of clemency, mercy, compassion, good-nature, humanity, or whatever else it may be called, so far as is consistent with wisdom.—*Addison, Fables*, v.

Clement. adj. Mild, gentle, merciful; kind, tender, compassionate.

Clemently. adv. In a mild or merciful manner.

Clench. v. a. [as to form, in the same relation to *cling* as *vench* is to *wing*, *drunch* to *drunk*; hence, originally, in sense, 'make, or cause, to cling': see, however, *Clinch*, *Cling*, and *Clumsey*.] Fasten, as with a rivet; draw tight; grasp firmly.

He recalls a thousand times the scene, the moment, in which but a few hours past he dared to tell her that he loved; he recalls a thousand times the still small voice that murmured heracitated febrility; more than a thousand times, for his heart clench'd the idea as a diver grasps a gem.—*Disraeli, The young man, Coningsby*, b. vii. etc. vii.

As applied to reasoning in such expressions as 'he clenched,' meaning 'placed in a firm and unassailable condition,' it is possible that, over and above the metaphor from the rivet, there is the similarity in sound or form with the technical term *clenchus* = proof. See *Elench*; also *Clinch*.

Clencher. s. That which clenches: (used of an argument: see *Clench*).

Clenching. part. adj. Convulsively grasping.

(Milton, *L'Allegro*.)

The *g-*, here, represents the *ge-*, the general prefix to A.S. particples: *clippian* = call, *clippianne* = to call, *ge-clipped* = called.] Call; name. *Obsolete*.

They clope us drunkards. *Shakespeare, Hamlet*, i. 4.

Clope. v. n. Call. *Rare*.

This is what the poor call shoplifting, the rich and learned *cleptomania*.—*Douglas Jerrold, St. James and St. Giles*.

Clerestórial. adj. Appertaining to a Clerestory.

Clerestory. s. [This word, which occurs neither in the previous editions nor in Webster, is entered according to the usual spelling; but without an accent. This is because its derivation is doubtful, whilst its length depends on its derivation. It is often, perhaps generally, sounded as a quadrisyllable; whereas, if it be simply the combination *clear* + *story*, it is a trisyllable. This latter derivation rests on the text of the chief modern works on architecture, checked by references to individual authorities whom it would be ostentations to quote by name. Still there are doubts; doubts which fall under two heads. Those that belong to the first may be dealt with at once. The extracts show that the meaning of the first element is equivocal. *Clear* may mean *light*, or it may mean *free*. The etymological evidence is in favour of the former. Though the word has two meanings in English, *clair* in French and *chiaro* in Italian mean, either always or generally, *light*; and its French and Italian equivalents are *clair étage* and *chiaro piano*.

In respect to the word being, in the first instance at least, *clear story*, the case is different. Such an origin, to an etymologist, seems little better than the concretion between *sparrowgrass* and *asparagus*. The class of words in which a strange term misunderstood is assimilated to some familiar one, of which either the form or import, or both, admit of the confusion, is so large, and the exceptions to its cataphoric character so few, that such an etymology as *clear-story* is an extreme improbability. Nevertheless, whoever objects to it must give full value to the opinion of those who look at the thing rather than the word.

In favour of the current view are—

1. The fact of the French having *clair étage* (= clear stage), the Italian *chiaro piano* (= clear plane), as its equivalents: provided that these are old terms, and not the invention of modern writers on architecture.

2. That of *clear story* appearing in a document so early as the Will of Henry VI.

3. That of *story* in its ordinary sense of the *story of a building* being, at least, more characteristic of English architecture than of that of any other country.

4. The agreement between the name, so derived, and the meaning.

5. The fact that DuCange gives no such word as *clerestorium*, the one which, at the first view, suggests itself as an origin.

6. The existence of the compounds *blind-story* and *orery-story*, the former applied to the triforium as opposed to the *clear story*, and the latter denoting the *clear story* itself.

Against it are—

1. The fact of *story* being a word which, even now, is slow to enter into a true com-

pound. When we talk of a *first* or *second story*, the words are generally, perhaps always, separate, i.e. *first story*, not *first-story*; and, even here, *floor* is the commoner element, as *ground-floor*, *first-floor*.

2. Secondly (and here the editor must premise that he takes his data solely from the current works on architecture, especially the Glossary of Architecture, referring to them, whether for or against his criticism, without either special knowledge of the subject or investigation of ultimate authorities), the extracts that favour the received derivation are all subsequent to A.D. 1400, or the time when the Norman French ceased to be commonly spoken in England. Yet *clerestère* is given as the French for *clear-story*. Assuming, as in the previous case, that this is an old word rather than a modern coinage, we find in it a serious objection. However important the English school of church architecture may have been, or however great may have been the influence of certain guilds in the diffusion of architectural terms, a French word like *clerestère* derived from an English *clear* + *story* is an improbability.

In respect to its sound, we may presume that the tradition of its pronunciation as a part of the spoken language has been broken, it being possible that the word was never used, except on the strength of its appearance in books, between the time of Hugo Jones and the present. Hence, the word may be treated as a *revived* one. If so, its sound may be determined by a body of architectural authorities; or, at least, the spelling may be fixed and the pronunciation allowed to take its course; the theoretical propriety of the orthography, as tested by the derivation, being left as uncertain or insoluble. In this case, however, the fact of the word, whatever it may be, having derivatives must be borne in mind; so that those who are satisfied with *clear-story* must consider whether such a word as *clear-storial* would be equally tolerable; or, if not, whether *clerestorial* must be avoided; or, when used, be looked upon as a derivative of *clear-story* which is not to be split etymologically. In fact, it is the word *clerestorial* that supplies us with the best evidence in favour of the original word having been quadrisyllable, and it is the same word which justifies the spelling of the present entry. Whatever else *clerestory* may be, in lexicography, it is the base of *clerestorial*.

The existence of *clear-story* as a combination of two words (or even as a true compound) with a definite architectural import is by no means impugned by these remarks; indeed it may be found with a meaning little different from that of *lunette* or *skylight*. Nor is there any reason why even a true *clerestory* may not, also, be called a *clear-story*. The question before us is that of the derivation of the name of a certain portion of an ecclesiastical edifice, combined with that of its spelling, the result being that *clear-story*, to the exclusion of *clerestory*, is condemned.]

For definition of the word as commonly used see first extract.

Clear story or *clear story* [is] the upper vertical divisions of the nave, choir, and transepts of a church. It is clear above the roof of the aisles, whence it may have taken its name, but some have derived the name from the *clair* or light admitted through its tier of windows. Nearly all the cathedrals and large churches have *clear stories*, or tiers of arcades, and also of windows over the aisles and triforia. There

It is not always easy to learn when and where works put forth under a false name were really written; but we have already mentioned several which were written in Alexandria since the time of Eusebius II., and it is probable that many others were about this time forged by the dishonest cleverness of the Alexandrians.—*Sharpe, History of Egypt*, vol. II, ch. xiii.

Clicking. *verbal abs.* Act of that which clicks.

A dull rotation, never at a stay,
Yesterday's live tin image of to-day;
While conversation, an exhausted stock,
Grows drowsy as the clicking of a clock. *Cropper, Hape, 103*.

Client. *s.* [Lat. *cliens*, *client-is*.]

1. One who applies to a professional lawyer for counsel, or the conduct of a suit.

There is due from the judge to the advocate some communication, where cases are well handled; for that upholds in the client the reputation of his counsel. *Arcene, Rascals*.

Advocates must deal plainly with their clients, and tell the true state of their case.—*Jeremy Taylor, Rule and Exercise of Holy Living*.

My mother is something better, though, at her advanced age, every day is a *climacteric*. *Pope*.

It had been a task worthy of the moral philosophers to have considered with equal care the *climactericks* of the mind; to have pointed out the time at which every passion begins and ceases to predominate, and noted the regular variations of desire, and the succession of one appetite to another.—*J. Johnson, Rambler*, v, 151.

The rider seemed to have passed the great *climacteric*, but looked hale and vigorous. *Sir E. L. Bulwer, Eugene Aram*, II, ch. v.

Climacteric. *adj.* In *Medicine*. Appertaining to, or connected with, the climacteric. See preceding entry.

It has been observed that independent of any positive alteration in the structure of a particular organ, there occasionally occurs at a certain period of life a sudden and general alteration of health, which is of uncertain duration, though generally of no long continuance, and to which the term *climacteric* disease has been applied. It may occur at any time between the ages of fifty and seventy-five.—*Royce, in Forbes's Cyclopaedia of Practical Medicine*, Age.

Climatal. *adj.* [see *Climatic*.] Relating to climate.

The period of observation does not include the years since 1583, inasmuch as they have been exceptional in many respects, and probably form part of a cycle not yet completed, whilst the sixteen years selected appear to complete two *climatal* cycles.—*Arcted, The Channel Islands*, p. 133.

Climatic. *s.* [Fr. *climat*.] In the geographical sense, a zone measured on the earth's surface, of which there are 24 between the equator and the polar circle, called half-hour climates, in the course of each of which the longest day becomes half an hour longer, and 6 between the polar circle and the pole, called month climates, in the course of each of which the longest day becomes a month longer; in the common and popular sense, a region, or tract of land, differing from another by the temperature of the air.

In the extreme north of the island, the peninsula of Jaffa and the vast plains of Nour-kalawa, and the Wany form a third *climatic* division.—*Sir J. E. Tennant, Cydon*, pt. I, ch. ii.

Considering the regular form of this word it is a scarce one. It is given, however, in the American dictionaries, and in Hilpert's *German Dictionary* translated *Klimatisch*. In many places where it might be expected it is either expressed by a circumlocution, by *climatal*, or by some such word as *meteorological*, *atmospheric*, *geographical*, or *telluric*, generally preceding influences. The doubt as to the recent may have something to do with this; though *climatic* is the true pronunciation.

The want of a ready-made term like Physics, or Physic, probably lies in the fact of the word having taken its secondary and geographical sense during the Alexandrine, rather than the Athenian, stage of the Greek language, after the time when scientific treatises were written with titles derived from the adjective in -*ιος*. See *Chromatics*.

The objections to *climatal* lie chiefly in the accent; the *a* in the last syllable of *climatal* being long, whereas the accent of ordinary trisyllables in -*al* is on the first.

Climatological. *adj.* Connected with climate.

This . . . group . . . embraces populations actually affiliated to each other, rather than populations exhibiting the common effects of common social . . . climatological condition.—*E. G. Latham, Varieties of Man*, p. 339.

Climatology. *s.* Investigation of the phenomena and laws connected with climate.

In treating *climatology* as a science, it is desirable that some correct and convenient mode should be adopted, for computing and expressing the comparative variability to which the temperature in different parts of the globe, and in different parts of the year in the same place, is subject from non-periodic causes.—*Transactions of Royal Society*, p. 353: 1863.

Climature. *s.* Same as *Climate*. *Obsolete*.

Have been in earth together demonstrated
Unto our *climatures* and countreymen. *Shakspeare, Hamlet*, I, 1.

Still rising in a *climax*, till the last,
Surpassing all, is not to be surpass'd. *Graucille*.

Climb. v. n. preterite, *climb* and *climb'd* (the *b* being part of the original word, and not, as in *humb*, &c., a mere enclitic adjunct). [A.S. *climban*.] Ascend up any place; mount by means of some hold or footing: (implying *labour* and *difficulty*, and *successive* efforts).

When shall I come to the top of that same hill?—

(Rich.)

In our British birds, eight genera . . . belong to the *Scansores* . . . commencing with the family of the woodpeckers. *Yarrell, British Birds, Great Black Woodpecker*.

Clinical. adj. Relating to the bedside: (applied, in *Medicine*, to instruction founded upon cases under observation).

I have always thought that hospitals are not converted to half the good they are calculated to be, as schools of medicine. . . . I have always thought, that in our schools every mode of lecturing has been existed about *clinical* lecturing; and every place where knowledge is to be had, or supposed to be had, has been unduly preferred to the bedside. . . .

With respect to *clinical* lecturing itself, custom has added it of its peculiar character, and what of half its advantages and half its popularity. It has been separated too much from the wards and the bedside, and has deviated into discussion of *etiology* & pathology and therapeutics. *P. M. Latham, Lectures on Syphilis connected with Clinical Medicine*, lect. ii.

Clink. v. n. Strike so as to make a slight sharp noise.

I shall *clink* you so merry a bell,
That I shall wake you all this company.

Chaucer, Shipman's Tale, Prologue.

And let me the *clink* of a bell.

Shakespeare, Othello, ii. 3, scene.

To this word references have been made under both *Cling* and *Clank*. This is because a definition in the ordinary sense of the term was impossible. The meaning of all the three words is best illustrated by comparison; the question being one of the three different, though allied, sounds.

They are varieties of the same sound, and that a *metallic* one. No one applies any of the three words to that emitted by the collision of two pieces of wood; nor yet to that of a piece of wood against a piece of metal; except perhaps in a few exceptional cases connected with *clung*, such as we have when a resonant piece of metal, like a bell, is struck by a tongue of wood or leather; in which case the sound still preserves its metallic character from the bell. In other words, it is a bell; and (as such) metallic, but modified; in some cases muffled. *Clunks* and *clinks* almost always imply metal on both sides. If otherwise, something is either made to act as a metal, or its influence is overridden by a metallic element.

With these preliminaries we may make the difference clear by comparisons. All suggest the notion of sound, and all of sound with repetition; either real repetition of the sound, or repetition simulated by prolonged vibrations.

Clung reminds us most of a bell; *clank*,

of a chain (heavy rather than light); *clink*, of the collision of, comparatively, thin and small metallic plates. In respect to the adjectives applied to them thus much may be said, viz. that though *clanks*, as intermediate sounds, may be either acute or bass according to their approach to the corresponding extreme, no one ever talks of a sharp *clank* or a deep *clink*.

It may not be unnecessary to remark that in these words we must guard against the notion that in the combinations *-ng* and *-nk* we are dealing with the ordinary sound of *n*, as in *chin*. Neither are we dealing with the sound of *n* *g*. The real sound is (approximately) that of *ng*, treated as a single sound, in *clang*; and that of *ngk* in *clank* and *clink*.

The absence, too, of any combinations of *cl-* and *-ng* with the vowels *e*, *o*, and *u*, as the representatives of metallic sounds, must be noticed. *Clenk*, *clunk*, and *clunk*, as words of the same general import with *clang*, *clank*, and *clink*, have no existence in the current English. Nor is their non-existence accidental.

For the complement to these remarks see *Crush*, in which the onomatopoeic import of the combination *cl-* is further noticed.

Privily he peeped out through a chink.

Spenser, Shepherd's Calendar.

Clinker. *s.* [Dutch, *klinkard*.—observe the change from a foreign to a native form in the two extracts from Evelyn; also, the fact of *klinkard* being a Dutch substantive, not an English participle.] Kind of brick. See extracts from Gwilt.

klinkard brick, which likewise javes the streets, —

some objected to, as being too hot for the horses' feet. *Ibid.* § 1830.

Clinkers are bricks impregnated with nitre, and
more thoroughly burnt by being placed nearer the
fire in the kiln. — *Ibid.* Glossary.

Where is he living, *clipp'd* in with the sea,

Who calls me pupil?

Shakespeare, Henry IV. Part I. iii. 1.

Clip. *v. a.* [see remarks under next entry.]

1. Cut with shears or scissors.

Your sheers come too late to *clip* the bird's wings,
that already is flown away. — *Sir P. Sidney*.
By this lock, this sacred lock, I swear,
Which never more shall join its parted hair,
Clipp'd from the lovely head where late it grew.

Pope.

He spent every day ten hours dozing, *clipping*
juppers, or darning his stockings. *Swift*.

If mankind had had wings, as perhaps some ex-
travagant atheist may think is deficient in that, all
the world must have consented to *clip* them. —

formerly been convicted of perjury and sentenced

Much higher than friction is. — *Sir J. De la Haye*.

But Love had *clipp'd* his wings, and cut him short,
Confin'd within the parthen of his court.

Dryden, Fables.

Clip the king's English. The term *king's
English* in this phrase suggests something
more than the simple *clip* of the extract
under 2, the notion of debasement like that
of the coin of the realm being superadded.

Mrs. Mayores *clipped* the king's English. — *Ad-
dison, Spectator*.

Clip. *v. n.* [see remarks.]

Some falcion stoops at what her eye design'd,
And with her eagerness the quarry mis'd,
Straight flies at cluck, and *clips* it down the wind.

Dryden.

The verb here, notwithstanding its being
followed by *it*, is neuter, the construction
being that of 'Goes it.' See *Go*.

[The origin of the term *Clip* requires some
notice. This is the last of three different
entries, in each of which the verb in ques-
tion is treated as a distinct word, because
it is thought better to err on the side of
separation, than on that of confusion.

It is by no means certain that the ideas
of *clapping* and *cutting* are disconnected.
With shears and scissors, there is some-
thing on each side of the object upon which
they close; and in this respect their mode
of cutting differs from that of an ordinary
knife, and approaches a clasp. With a
curved forceps, or with the jaws of a stag-
beetle, there is, superadded to the cutting,
an actual, or approximate compass, encase-
ment, or embrace. Nevertheless, the words
are separated; though only provisionally.

If the third *Clip* is to be connected with
the other two, it must be with the second
rather than the first. The connection be-
tween *swiftness* and *cutting* is illustrated by
such expressions as 'Cut along, Cut away,'
and others of colloquial, rather than classi-
cal, character. See *Cut* and *Eclipse*.

With the German *Klipper*, however, the
connection is undoubted; *klepper* being
explained in *Adelung* as a horse trained
for swiftness, racehorse. It is with this
sense, and probably with its other colloquial
senses suggestive of superiority, that *clip-
per* = fastsailing ship, is connected.]

Clip. *s.* Embrace. *Rare*.

Finishing these northern climes do coldly him
embrace.

Not us'd to frozen *clips*, he strave to find some part,
Where with most ease and warmth he might em-
ploy his art.

Sir P. Sidney, Astrophel and Stella.

Clipped. *part. adj.* Cut, in its general and
special senses.

But in man's dwellings he became a thing
Restless and worn, and stern and wearisome,
Droop'd as a wild-born falcon with *clipp'd* wings,
To whom the boundless air alone were home.

Byron, Child Harold's Pilgrimage, iii. 15.

Credit had never been so solid. All over the king-
dom the shopkeepers and the farmers, the artisans
and the ploughmen, relied beyond all hope from
the daily and hourly misery of the *clipp'd* silver,
were blessing the broad faces of the new shillings
and halfcrowns. — *Macaulay, History of England*,
ch. xxiv.

Saturday, the second of May, had been fixed by
Parliament as the last day on which the *clipp'd*

ceived by tale in payment of taxes. *Ibid.* ch. xxii.
After some delay they were able to produce a single
clipp'd halfcrown. — *Ibid.*

ting.

French crowns, and to-morrow the king

which had passed through the hands of an old Ro-
man *clipper*. — *Addison*.

2. Striking of a clock.

[French, *cloche*; German, *glocke*; Dutch *kloke*, a bell. Before the use of *clocks* it was the custom to make known the hour by striking on a bell, whence the hour of the day was designated as three, four of the bell, as we now say three or four o'clock. It is probable that *clocks* were introduced into England from the Low Countries, where this species of mechanism seems to have inherited the name of the bell which previously performed the same office. Swedish, *klocka*, a bell, a clock. The word *clock* is a variation of *clerk*, being derived from a representation of the sound made by a blow, at first probably on a wooden board, which is still used for the purpose of calling to service in the Greek church. Serbian, *klopka*, the board used for the foregoing purpose in the Serbian churches, German, *breit-glocke*, from *klopfe*, to clap or clock, to beat on the board, Estonian, *kolkua* (with transposition of the vowel, related to *clock*, as German *kolbe* to English *clap*), to strike, to beat, *kolkina*, to make a loud noise, *kolk-laui*, a board on which one beats for the purpose of calling the family to meals.—*Wedgwood, Dictionary of English Etymology*.]

Clock. *s.* Provincial name of the common dungbeetle; extended to other beetles, and, in some cases, to the cockchafer.

[In Jamieson the entry is *clock-bee*, suggesting its application to some hymenopterous or dipterous insect resembling a bee. Hence it is probably the same word as eleg, and, if so, it has a fair claim to be treated as a true Norse name; *klæg* = Lat. *tabanus* being a Norwegian term, and, as far as a negative assertion may be ventured, one not easily found out of Norway. According to the editor's personal experience, the parts of England (and these are Lincoln and the more Danish parts of the island) where *clock* more especially stands for beetle, are the parts where eleg = gaddly is the rarest.

Though a Keltic origin (*golach*, a word not found in the ordinary dictionaries) has been claimed for *clock*, and though the connection between the sound of a beetle's wings and a bell's (see Clock) tongue has been suggested, the identity, word for word, of *clock* and eleg is held to give a preferable derivation; though the connection between certain beetles and death-watches, and watches and clocks may have helped the confusion.]

Close. *v. a.* (sounded cluze.) [Lat. *claudo*, *p. - clausus* - shut. - Common in composition, as the second element in a word.

In respect to form, the participle of the compounds is *clausus*: in respect to meaning, the change varies with the combination. For the word before us, however, that which most requires notice is the one with *con* (*cum*). *Conclude*, whence *conclude*, means 'end or finish'; and that through an association of ideas which is illustrated by the phrase 'shut up' - finish in our own language. Hence we get two classes of meanings for the word before us. 1. Those connected directly with the simple verb, and the primary sense of *shut*. 2. Those connected with the compound *conclude*, and the secondary sense of *finish*. Those connected with *include* are less important. That this distinction is clear or equivocal according to the character of the instances is to be seen under *Closing*.]

1. Meanings connected with *claudo* rather than *conclude*.

Clot, as in **Clot-(bar)**. *s.* [the latter two words rather than a compound; and, indeed, of doubtful character as a combination.] Clot-bar occurs in Botany as the English name of either the ordinary Bur (Aretium Lappa), or certain plants of a burlike character. How far it is a really vernacular name is doubtful.

There is no need of making Clot part of a compound. In A.S. it was simply *clate*; the *á* being, probably, sounded as the *o* in stone. It was certainly applied to the ordinary Bur; and probably to other plants having involucre furnished with small hooks. It suits the Germ urbanum; for it evidently meant something that caught.

Here, however, it chiefly commands notice as a word suggesting an explanation of one of the meanings delivered by the combination *cl-t*. The word *Cleats* in Shipbuilding (see Young's Nautical Dictionary), which denotes 'pieces of wood with notches for setting shores against, . . . also for belaying ropes to, and other purposes,' agrees with the name of the plant both in form and import.

The connection with the Clot of the preceding entries is less direct; and, for this reason, the words are separated.

Clot. v. a. Form into clots or clods; hang together; congregate; congregate; gather into concretions.

Here mingled limbs, here brains and gore,
 Laid clotted. *J. Phillips.*

Clot. s. (with the *o* short, and with the *th* pronounced as in *thin*, not as in *thine*.)

[Clot, at present, seems to mean something *woven* rather than something *worn*. It arose, however, out of the notion of a garment rather than out of that of a tissue.

Its plural is *cloths*, as in 'two different cloths,' meaning two different kinds of cloth. Meanwhile, *clothes* is not its plural; though the true singular of *Clothes* is rarer than the true plural of Cloth. See Cloth.

Neither does Cloth stand in the same relation to Clóthe the verb, as Use, the substantive, sounded *uce*, does to Use the verb, sounded *uze*; though the change of the final consonant is of the same kind. In Cloth, however, the vowel is shortened, while in Use it remains unchanged.

Though apparently the simplest of its family, it is not only a derived word, but a comparatively new derivation. It means something *which clothes*; yet it is so restricted to *woven* articles, that, taken by itself, it looks as if its primary meaning were connected with weaving. Moreover, its commonest application is to woollen articles. Though we may talk of cotton cloth and linen cloth (not, however, of silken), we generally mean, when we use the word alone, woollen. No one says that a hat or a shoe is cloth to the head or the foot; though many may say that it is *clothing*. In short, the word has a special, which has grown out of a general, sense; and that, at a comparatively late date. In respect to its immediate origin, the remarks

CLOT

hitherto made, notwithstanding the strictures which accompany them, have pointed towards the verb as its base, giving, as they do, the analogies of Use = *uze*, and Use = *uce*, to which we may add Greuse, and a few other words. But these words are of Latin or French origin, whereas Cloth is German; besides which, their final consonant is not *th* but *s*. The word with which it coincides most closely is Bath, a word which comports itself to *bathe*, both verb and substantive, as Cloth does to *clothe*. We *clóthe* (*clóthe*) ourselves in *clóths*, just as we *báthe* (*báthe*) in *báths*; and that without stretching the common practice of our language. But we may also take (in a river) a *báthe* every morning, or two *báthes* (bathings) a day. The form, then, in the long vowel, with the sound of the *th* in *thine* (*dh*), is the original one, and, this being determined, the evidence that the older meaning was connected with *clothes* as garments, rather than with *cloth* as a tissue, is satisfactory. The German and Scandinavian for Cloth are *tuch* and *dak*; words which have nothing to do with the root Cloth, but which are still to be found in English in such combinations as *Russian duck*, which, when white trousers were worn, was a common one.]

Woven material, generally of wool, and for wearing apparel; but also of linen and cotton, and applied to purposes other than those of clothing, such as table-covers and canvass for painting.

1. Visible collection of vapours in the air.

Now are the *clouds* that lower'd upon our house,
In the deep bosom of the ocean buried.

Shakespeare, Richard III. i. 1.
As a mist is a multitude of small but solid globules, which therefore descend; so a vapour, and therefore a watry *cloud*, is nothing else but a congeries of very small and concave globules, which therefore ascend, to that height in which they are of equal weight with the air, where they remain suspended, till, by some motion in the air, being broken, they descend in solid drops; either small, as in a mist, or larger, when many of them run together, as in rain. *Grege, Compendium Naturæ*.

Clouds are the greatest and most considerable of all the meteors, as furnishing water and plenty to the earth. They consist of very small drops of water, and are elevated a good distance above the surface of the earth; for a *cloud* is nothing but a mist flying high in the air, as a mist is nothing but a *cloud* herebelow. *Locke, Elements of Natural Philosophy*.

would have clapt i' the clout at twelve score. *—Shakespeare, Henry IV. Part II.*

Then applied to a lump of material clumped on or hastily applied to mend a breach. In the same way English *clutch*, to mend clumsily, from Dutch *klutsa*, to strike; English, *clutch*, in the same sense, from Welsh *clut*, English *clut*, to strike. *—Wedgwood, Dictionary of English Etymology.*]

- Clout.** *r. a.*

dainties stow'd. *—Dryden, Polydorus, xiv.*

I've seen her skin the clouted cream,
And press from spongy curds the milky stream. *Gay.*

[There is no necessity to suppose that
clouted is the proper, *clotted* the im-
proper, word in this combination; though
such may be the case. The Dutch has
klontermelk; concerning which we may
hold that the change to *klont* is that
which, in Greek, gives *clous* as the result
of the elimination of the *r* in the root
clous (*gen. clous*). But this would
make the *o* in *clotted* long. Meanwhile,
the same language gives *klontermelk*, a
form which admits the insertion of *n*. As
clut, *clot* are nasalised in *clump*, *clow*,
corresponding to *clout*, *clot*, we have Du-

nish *klunt*, a log, block; Dutch *klont*, a
clut, globe, lump. Dutch *klubber-melk*,
kloter-melk, *klonter-melk*, clotted cream,
coagulated milk. The close connexion be-
tween the ideas of a thick mass and the
action of striking is seen in English *clout*,
a blow, Dutch *klotsen*, *kloteren*, *klunderen*,
to beat, batter. *—Wedgwood.*]

- Clouted.** *part. adj.*

under next entry.] Small bulbs formed

'Tis mortal sin an onion to devour;
Each clove of garlic is a sacred pow'r. *Tate, Translation of Juvenal.*

Clove. *s.* [Fr. *clou*; Lat. *clavus* = nail.—The
explanation of this connection lies in the
form of the spice so called, which is not
unlike a small-headed nail or tack. The
Malay name means this; and, more or
less, a word of the same import is found
throughout most European languages.
When this is not the case, the term is a
modification of the Latin *caryophyllus*, from
the Greek *καριον* = date, and *φύλλον* = leaf.
Sometimes the two are united. Dutch,
kruidnagel = krouit (vegetable) nails, *grof-
filsnagelen* (the first element being from
caryophyllus); German, *nägeln*, *gewürz-
nägeln* (spice-nails); Danish, *nelliker*;
Spanish, *clavo aromatico*; French, *clou
de girofle* (*caryophyllus*) and *giraflier*.
That the name for *clou* as applied to
garlic has a different origin from *clare* the
spice is indicated by the Dutch word, and
is verified by the fact that in Dutch (as
there is no derivative from the Latin
clavus denoting a nail, but on the con-
trary only the German term *nägel*) there
is no room for confusion. To which it may
be added that in Anglo-Saxon we have
more than one compound of *clef*, as
clefgyrt and *clefyr*, names of plants which
it is difficult to identify. Upon this point,
however, more will be said under Gilli-
flower.] *Adjectival* construction com-

Gilliflower.

To this, indeed, it is the most applicable.

Clubshaped, adj. Having the shape or ap-
pearance of a club; synonym of the botan-

Clue, s. [see *Clew*.] Ball, bottom, or skein
of thread supposed to have been used by
certain persons as a means of finding their
way through certain mazes or labyrinths;
means of guidance or direction in general;
hint; inking.

Into what labyrinth of fearful shapes

My simple project has conducted you—
We're but my wit as skilful to invent
A clue to lead you forth!

C. Lamb, *The Wife's Trial*.

Word for word this is Clue. Neither is it very different in import; the meaning of both words being a bottom or skein of thread, literally in the one instance, figuratively in the other.

Generally, however, they are distinguished in the *spelling*; and this distinction the editor, without approving, adopts. This is because, if one of the two modes of spelling were sacrificed to the other, it would be the one which, on the etymological principle, ought to be preserved. That Clue best represents the A.S. *clive* is as certain as it is that Clue is the form which is likeliest to prevail. The explanation of this difference is partly a matter of pronunciation, partly one of spelling. The true sound of the combination *ew* is that of a diphthong of which the elements are the *e* in *pet*, and *u*. That of *ue* is the *oo* in *food* or *book*, i.e. the long sound of the simple vowel *u*. These sounds are sufficiently alike to be confounded. In the confusion, however, the vowel sound has a tendency to supersede the diphthongal. To hear Blue sounded as *blew*, and True as *traw*, is still common, though the tendency of the simpler pronunciation is to increase in frequency, and finally to eliminate the diphthong *ew* from the language. Nevertheless the latter is the older form, whilst the spelling in *w* is the spelling which best represents the etymology. However, from the fact of its being no part of the Latin alphabet, *w*, like *k*, has been eschewed even in our own language, as much as possible; and where it followed a vowel this eschewal was easy. Hence its elimination from numerous words wherein it appeared in the Anglo-Saxon, such as Blue, Hue, and many others.

The other principle is the one illustrated by such words as *hew* and *blew* (verbs) as contrasted with *hue* and *blue* (nouns). With these, a difference of spelling is an orthographical expedient for indicating a difference of sense.

In *clue*, then and *clew* we get a differentiation of this kind, and it is a remarkable instance; the difference denoted being very slight. Whilst *hue* and *hew*, *blue* and *blew*, differ from one another as different words and different parts of speech, *clue* and *clew* differ merely as the same word in its literal and in its metaphorical sense.

Of course, this applies only to those who sound the two words alike. To anyone who pronounces the Clue in a *clew* of cotton in one way, and the clue in the clue to a mystery in another (*clew* and *clow*), the words are really two, and the difference in spelling, which from the present point of view is only excused, becomes justified.

Clamp. *s.* [see Crush.] Cluster of trees or shrubs: (anciently a *plump*).

The small and circular clumps of firs, which I see planted upon some fine large swells, and me often in mind of a coronet placed on an elephant's or camel's back.—*Shenstone*.

Themselves perhaps, when weary they retreat
To enjoy cool nature in a country seat,
To exchange the centre of a thousand trades,
For clumps, and lawns, and temples, and cascades,
May now and then their velvet cushions take,
And seem to pray for good example sake;
Judging, in charity, no doubt the town
Fious enough, and having need of none.

Cowper, Hope, 237.

Clamper. *s.* [see extract.—this is the base of Clomperston.] Wooden shoe; clog. *Rare*.

[*Clog*, a wooden shoe, a shoe with a wooden sole. From *clog* in the sense of a block or clumsy lump of wood. They are also called *clumper*. (Halliwell.) Dutch, *klapper*, *klompe*, *klomper*; Platt Deutsch, *klönken*. In like manner from Italian, *zoccolo*, a tree, *zoccoli*, clogs, pattens. Modern Greek, *zōzōr*, log, stump of a tree, *zōzōr*, a clog, wooden shoe; German, *klotz*, a block, log, clog; *klotz-schuh*, a clog, wooden shoe.—*Wedgwood, Dictionary of English Etymology*.]

Clamper. *r. a.* Form into clumps or masses: (the extract was, perhaps, written under a joint notion of *clumbering*). *Rare*.

Clumsily. *adv.* In a clumsy manner; awkwardly; without readiness; without nimbleness; without grace.

Clumsiness. *s.* Attribute suggested by Clumsy; awkwardness; ungainliness; want of readiness, nimbleness, or dexterity.

The drudging part of life is chiefly owing to clumsiness and ignorance, which either wants proper tools, or skill to use them.—*Collier, Essay on Fable*.
My letters are generally charged as double at the post-office, from their ineffectual clumsiness of foliure.—*Lamb, Letter to Burton*.

Clumsy. *adj.* [see last extract.] Awkward; heavy; without art; unhandy; without dexterity, readiness, or grace: (used of persons, actions, or things).

The Carthaginians followed the enemies in chase as far as Trebia, and there gave over, and returned to the camp so clumsy (translation of 'ita torpentes gela') and frozen as scarcely they felt the joy of their victory.—*Holland, Translation of Livy*, p. 425. (Trench.)

The matter ductile and sequacious, apt to be moulded into such shapes and machines, even by clumsy fingers. *Ray*.

But thou in clumsy verse, unlik'd, unpainted,
Hast shamefully defied the Lord's anointed.

Dryden.

Thou clumsy outside of a porter.

How could it thus conceal a carrier? *Swift*.

[It will very often be found, when we are distracted by two possible derivations, that they may both be traced to the same ultimate source. If we were well acquainted with the Old English forms we should confidently derive clumsy from clump, in analogy with Dutch *klualet*, awkward, clumsy, from *klual*, a clod, log; Swedish *klubbig*, *klumpig*, *klumpig*, lumpy, clumsy, from *klubb*, *klump*, *kluns*, a block, knob, lump; or Dutch *loompach*, stupidus, pigger, from *loomp*, a lump. But the immediate origin of the English word is from the figure of hands contracted or stiffened with cold. *Platt Deutsch, *klumen*, *klouen*, *erklouen*, to be stiffened with cold, *lechlouie*, *kloune*, suffering from cramp. Old English, *reantylt*, *enabult*, *cloumed*, *clousid*, stiffened with cold. (Pronountrium *Furvertrium*.) Thou clousid for cold. (Pronountrium *Furvertrium*.) Our hands are clousid. (We stiffen in Wayfarers.) Davi de froid, stiff, clumsy, benumbed. *Colgrave*. This clumsy is awkward and ineffectual, like one benumbed with cold. Finnish, *kaltaa*, stiff with cold, and thence unskilful, slow.—*Wedgwood, Dictionary of English Etymology*, in voce.]

It may be added that this connection with cold has the approbation of Archbishop Trench, who considers that it is shown by the fact of its being the translation of 'torpentes gela.' It is certainly strengthened by these words. By itself, however, the passage is by no means conclusive.

Clunob. *s.* [probably connected with *cling*; stiff clayey soil, in the London clay district, when only half moist enough for digging, being called *clung*, *clunyon*, and *clungy*.]

1. Soft chalk (sometimes called *clunch clay*) capable of being sawn into large blocks, which, in masonry, are laid as bricks: (so

named in the chalk districts of Cambridge-shire, Suffolk, and Essex, and probably elsewhere).

Like other kinds of clunch (as the lower chalk is sometimes called), this bed forms an easily cut and a very useful material for certain kinds of internal decorative work.—*Lustel, Geology*, vol. ii. p. 455.

2. Stiff clay in general: (so named in other districts than those belonging to the chalk formation, where in use at all).

In Staffordshire, upon sinking of a coal-mine near the surface, they met with earth and stone, then with a substance called blue clunch, and after that they came to coal. *Jacob, Larv Dictionary*, in voce.

3. As a scientific term adopted from the local dialects into the language of Geology, it means, when standing alone, the *clunch* of the Chalk.

Clung. *v. a.* ? Apparently, crowd or stuff together: (the clause, however, in which it occurs, is the translator's rather than the original author's, in whose text the comparison is not found: see xxxi. 13). *Rare*.

The footmen then, wanting defence on their flanks, stood in plumps, with their companions so thrust and thronged together, as if they had been clung; not one of them could either draw his sword or bring back his hand. *Holland, Translation of Ammianus Marcellianus*, p. 424.

Clunging. *part. adj.* [the last syllable, perhaps, sounded as the -ing in *plunging* from *plunge*, i.e. as -dzing.] Exact meaning doubtful, but connected with some of the senses of *Cling*. *Rare*.

Clush's empire

Of crumbled smoke, and heavy clunging mists.

Greenhill, Art of Embalming, p. 273.

Co-, Con-. As we have now arrived at the commencement of that long and important list which contains the compounds of the Latin word *cum*, with some general remarks upon the forms which it takes in combination may be useful. They will bear more especially upon the changes undergone by the last two letters (*u* and *m*): these changes being determined by the nature of the initial letter of the second element.

As a general rule, the letters under notice (*c-u-m*) are rarely retained unaltered; the *u* becoming *o*, and the *m* becoming *n*.

1. When the second element of the compound begins with a vowel, the *m* is omitted altogether, and the *u* is changed into *o*; the result being *co-*, as in *Coacervate*. The two vowels thus brought together are sounded separately, belonging, as they do, to different syllables, and never constitute either a diphthong or a single long vowel, as in *Coant* or *Coat*.

The letter *h* is treated as a vowel, or rather as having no power; so that in *Co-habitation*, for instance, the form taken by *cum* is just what it would have been if the second element had been *habitation*.

2. When the second element of the compound begins with a liquid, the vowel becomes *o*, and the *m* takes the sound and sign of the liquid which follows, whatever it may be, as in *Colloquy*, *Commute*, *Connotation*, and *Corrode*; of which the elements, when separate, are *cum + liquor*, *cum + muta*, *cum + nato*, and *cum + rodo*.

Etymologically, these combinations give us real doublings of the sound, just as we find them in *Bookcase*, *Seaport-town*, and several other words; indeed in all wherein the first element ends with the sound with which the second begins. No one, however, so pronounces them; and it is by no means certain that they were generally sounded double in Latin: indeed, even compounds like the ones just quoted are often sounded *hoo-case* or *book-use*, and *seaport-town* or *seaport-own*, though improperly. And here it may be remarked, parenthetically, that it is only in compounds like these that the true sound of a double letter is found in English. All such spellings as *Butter*, *Better*, *Happy*, and the like, are mere orthographical expedients for showing that the vowel is short. Between the *t*-sounds in being *pitted* for having the smallpox and being *pitted* with the pockmarks themselves there is no difference to the ear; the sound being, in both cases, that of a single *t*.

3. When the second element of the compound begins with a mute, the change is determined by the class to which that mute belongs. In all cases, however, the vowel is *o*, as in *Compensation*, *Combustible*, *Conflict*, *Congruity*, &c.

1.) Before *p* and *b*, and only before the sounds of these two letters, is *m* universally retained; as in *Compensation* and *Combustible*. Before *f* and *v*, though letters belonging to the same class as *p* and *b*, and, like *m*, letters pronounced mainly by the action of the lips, and consequently of cognate character, the rule changes, and the combination requires *n*; as in *Conflict*, *Configuration*, and *Convict*. For the single exception see *Comfort*.

2.) Before *k* and *g* the letter is *n*, but

the sound, instead of being that of the *n* in *kin*, is that of the *ng* in *king*. *Conquest* and *Congruity* are sounded *cong-quest* and *cong-gruity*, not *con-quest* and *con-gruity*. This, however, only applies to *g* when sounded as *ngun*. In words like *Congestion*, it is but another sign for *j*, which is really *d* followed by *zh*, *con-dzhestion*. For its sound before *gl*, see *Conglobate*.

3.) Before *t* and *d* the sound as well as the sign is that of *n*, as in *Conturbation*. *Condolence*. That it is never that of *m* may be laid down as an invariable rule. Whether, however, *con-* is not (as with the vowel combinations) sometimes changed into *co-* is doubtful. For more on this point, see *Contemporary*. Before the sounds of the *th* in *thin* and *thine*, the element under notice is never found, those sounds being wanting in Latin.

4.) Before *s*, and the sound of *sh* as in *Conscience* (a combination not found in Latin), the letter is *n*.

It is not difficult to generalize these rules; the more so as they are, with slight modifications, rules of language in general, being founded upon the relations of *m* and *n* to other sounds. Thus *m* being labial, or sounded chiefly by means of the action of the lips, has to use a term borrowed from the language of Chemistry, a special affinity with *p* and *b*, sounds similarly produced; and in a less degree with *f* and *v*. In like manner *n* comports itself to *t* and *d*, and *ng* to *k* and *g*. The other details are less important. Those, however, which have been given are plain and patent enough to have been recognized in more than one alphabet. In the Sanskrit, for instance, there is a special letter for each modification. In our own language *m* is limited to *p* and *b*; *f* and *v* being, contrary to what the general philologist expects *a priori*, in the same category with *d* and *t*, i.e. preceded by *n*. This limitation of the use of *m* is sufficiently obvious; the chances of any doubt between it and *n* being small.

With *n*, however, and the omission of *n*, the case is widely different. It is a fact beyond dispute, that in many words where the rule as it stands at present would give *c-o-n*, we find only *c-o*; in other terms, *n* before *t* or *d* comports itself as *n* before a vowel. No one says *con-trustee*, but, on the contrary, *co-trustee*; and so it is in many other words. What we have to say to cases like this is that *co-* and *con-*, though words of the same origin, are, under the present view, different words; and that the rules just laid down apply to the combinations in question only when treated as combinations belonging to the Latin language, from which the words in which they occur are generally supposed to have been introduced, *ready-made*, into our own. When the two elements, however, are put together in English, the case is different, as may be seen in such words as *Co-mate*, *Co-partner*, *Co-parcener*. For further remarks on this point see *Co-mate* and *Contemporary*.

Lastly, a distinction should be drawn between those words wherein *cum* (*con-*) retains its significance and clearly denotes union or association, and those wherein its original meaning is either lost or but dimly seen. For an instance of this see *Contemnu*. The use of this remark is to guard

us against taking compound for simple words merely from the facts of their being either uncomposible or of the same import as the simple term. The one that precedes it is the more important. Fully understood it tells us that, though sound for sound identical, the particles are in reality two. 1. The first, *co-* is wholly Latin, and is *con-*, or *cum*, modified in form according to the sound by which it is followed; capable, also, of again becoming *con-*, for *cum*, when the sound by which it is followed is changed. 2. The second, though Latin in its origin, is, practically, English. It is not only *co-*, but always *co-*, irrespective of the sound which it precedes, and incapable of being interchanged with either *cum* or *con-*. The former belongs to such words as are taken as *wholes* from the Latin; the latter to such as are formed by putting the parts together in English. Such is the principle, and it is a simple one. That its application is very much the contrary will be seen in the sequel. Between words borrowed as wholes, and words made up by putting together their parts, the distinction is often difficult; and it is one for which the reader should be prepared.

Coal (Coals). *s.* [German, *kohle*, *pl. kohlen*.] This word enters into numerous compounds, many of which are often spelt as two separate words; indeed the constructions into which it enters, either as an *adjective* or as the *first element* in a compound are both numerous and indefinite.

Coapprehend. *r. a.* The difference between this compound and the simple form *apprehend*, as far, at least, as the following extract goes, seems to rest upon a confusion between the joint character of the things perceived and the joint character of the perception; to the latter of which it properly applies. In the case before us it was, probably suggested by the *syn* of the word *syn-taxis* (= co-arrangement) which follows. Unless this view be taken, the meaning must be, 'Performance of act of complex apprehension.' A true *comprehension*, however, consists in one object being apprehended by two persons, rather than two objects by one. *Obsolete*.

Over this armour the knight wore a dress usually denominated a surcoat or a tabard, . . . it was always sleeveless. As this surcoat was worn over the armour upon grand occasions, it was here that the growing taste for splendour and ornamentation developed itself with the greatest rapidity. Cloths of gold or silver, ermine, miniver, sadders, or other rich furs, were employed in its manufacture. The arms were borne upon this garment, whence the derivation of the term *coat of arms*. Cobalt is plentifully impregnated with arsenic; contains copper and some silver. Being sublimed, the fumes are of a blue colour: these German mineralists call *zaffre*.—*Woodward.*

Cobalt is a dense, compact, and ponderous mineral, very bright and shining, and much resembling some of the metallic ores. It is found in Germany, Saxony, Bohemia, and England; but ours is a poor kind. From *cobalt* are produced the three sorts of arsenic, white, yellow, and red; as also *zaffre* and *saffet*.—*Sir J. Hall, On Fossils.*

The principal ores of *cobalt* are those designated by mineralogists under the names of *arsenical cobalt* and *gray cobalt*. The first contains, in addition to *cobalt*, some arsenic, iron, nickel, and occasionally silver, &c. The other is a compound of

cobalt with iron, arsenic, sulphur, and nickel. Among the *gray cobalts*, the one most esteemed for its purity is that of Tumburg in Sweden. It is often in regular crystals which possess the lustre and colour of polished steel. *Ure, Dictionary of Arts, Manufactures, and Mines.*

2. Do or make anything clumsily or unhandily.

Is it not a firmer foundation for contentment and tranquillity, to believe that all things were at first created, and are since continually ordered and disposed for the best, and that principally for the benefit and pleasure of man, than that the whole universe is mere bounding and blundering; nothing effected for any purpose or design, but all ill inaccurately *cobbled* and jumbled together?—*Bentley, Sermons, l.*

Cocculus (Indicus). s. [Lat. = Indian berry; *cocculus* being a diminutive of *coccus* = berry.] See extract. In common use, though neither an English nor a single word.

Cocculus Indians, or Indian berry, is the fruit of the Mousperman *Cocculus*, a large tree which grows upon the banks of Malabar, Ceylon, &c. The fruit is blackish, and of the size of a cherry-stone. It owes its mercurial and poisonous qualities to the vegetable alkaline chemical principle called mercuria, of which it contains about one-fifth part of its weight. It is sometimes thrown into waters to intoxicates or kill fishes; and it is said to have been employed to increase the inebriating qualities of ale or beer. Its use for this purpose is prohibited by Act of Parliament, under a penalty of 200*l.* upon the brewer, and 500*l.* upon the seller of the drink. — *Enc. Dictionary of Arts, Manufactures, and Mines*.

Cochineal. s. [Spanish, *cochinilla* = woodlouse.] Insect so called used as a dye.

Cochineal was taken in Europe at first for a seed, but was proved by the observations of Lowenhook to be an insect, being the female of that species of shield-louse or coccus, discovered in Mexico so long ago as 1519. It is brought to us from Mexico, where the animal lives upon the *Cactus Opuntia* or nopal. Two sorts of *cochineal* are gathered—the wild, from the woods, called by the Spanish name *grana sin tierra*; and the cultivated, or the grain *finis*, termed also *mexicana*, from the name of a Mexican province. — *Enc. Dictionary of Arts, Manufactures, and Mines*.

Cock. s. [Provincial Danish, i.e. in Jutland, *cock* = bird.] In the German languages in general, the words for *cock* and *hen* are modifications of each other, *hahn* and *huhn*.

Another reason for believing that the original meaning of the word is *bird*, rather than *male*, is the relation borne to it by the words *chick* and *chicken*, evident derivatives; and that of a diminutive character, rather than derivatives connected with gender. In Greek the word *opra* was sometimes used specially for the *cock*.

No combination of sounds conveys so many different meanings as the one under notice. In the previous editions they are nearly all treated as the same word. In the present there is possibly an error in the opposite direction, and too many originally different words are perhaps assumed. Nevertheless, when the same combination of letters gives us a *bird*, a *tap*, a *boat*, &c., not to mention its power as a verb, it is better to err on the side of separation than on that of confusion.
